COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1001W/22	Course title: Analytical chemistry
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester there will be two written examinations in the field of General Chemistry and Organic Chemistry. Students must obtain a rating better than FX from both, thus fulfilling the condition for participation in final exam. The final evaluation will be determined on the basis of the results of the ongoing evaluation and evaluation oral exam.	
Learning outcomes of the course: The student will master the meaning of basic concepts and laws in chemistry, gain knowledge about properties chemicals. He or she is familiar with the nomenclature of inorganic and organic compounds. He or she wins basic knowledge of individual groups of organic substances, with emphasis on compounds that are part of living organisms. He or she knows the basic principles of laboratory methods of chemical analysis.	
Course contents: 1. Subject and object of chemistry research. Basic concepts, quantities and laws in chemistry. Structure of atom. 2. Periodic law and periodic table of elements. Chemical bond. Chemical structure and properties of chemical substances. 3. Phase states and Phase transformations. 4. Chemical reactions. Reaction kinetics. Thermochemistry. 5. Selected chapters from organic chemistry. Construction and bonds in molecules of organic compounds. Reactions of organic compounds. Effects of substituents. 6. Classification and nomenclature of organic compounds. 7. Carboxylic acids, structure and reactivity of functional and substitution derivatives of carboxylic. 8. Natural substances. Carbohydrates. Lipids. Isoprenoids (terpenes and steroids). Proteins. Nucleic acids. Alkaloids. 9. Basics of analytical chemistry. Quantitative analysis. 10. Protolytic, complexation, redox and precipitation equilibria in solutions. 11. Chemical calculations for the preparation of laboratory solutions 12. Laboratory electrodes.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1002W/22	Course title: Anatomy
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 3 hours per semester: 24 / 36 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: Active participation in presentations. After completing the presentations, a written examination. To participate in the exam, it is necessary to obtain 6 points from a 10-point test. The final evaluation is in the form of a written test, which contains 20 questions. It is necessary to write a test for 60%.	
Learning outcomes of the course: Course objective: Orientation in the subject of anatomy. Acquisition of anatomical nomenclature and basic anatomical concepts, anatomical planes and directions. The aim of the course is applied (clinical) anatomy and topographic anatomy. Theoretical knowledge: Gaining detailed knowledge of the anatomical structure of individual organs and organ systems. To be able to describe in Latin the macroscopic view of individual organs as well as their anatomical structure and the anatomical structure of the wall of individual organs. By understanding the anatomical structure and structure, to understand the physiological functions of individual systems. Practical skills: Based on anatomical description, the ability to identify and characterize individual organs and individual systems of the human body.	
Course contents: 1. Anatomy of the axial skeleton, skeleton of the limbs. 2. Myology, muscles of the head, torso and limbs. 3. Anatomy and structure of the digestive system. 4. Anatomy and structure of the respiratory system. 5. Structure of the heart, anatomy and branching of blood vessels. 6. Lymphatic system. 7. Anatomy and structure of the urinary system. 8. Anatomy of male and female genitals. 9. Blood. 10. Endocrine system.	

11. Nervous system.

12. Sensory organs.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1006W/22	Course title: Basic of Information and Communication Technologies
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester, participation in exercises, handing over practical tasks and elaboration of the final assignment.	
Learning outcomes of the course: During the semester, develop and submit 8 practical tasks, each with a weight of 10 points, a total of 80 points. Credits will not be awarded to a student who obtains less than 4 points from an assignment and at the same time does not submit all assignments with a minimum score. A: 80 - 72 points. B: 71 - 63 points. C: 62 - 54 points. D: 53 - 45 points. E: 44 - 32 points.	
Course contents: 1. Terminology in the field of ICT, acquisition, security, archiving, data compression, antivirus protection, cloud, types of software. 2. Work in Windows OS, selected system programs of Windows OS, identity of individual versions of Windows OS. 3. Hospital and health information systems - structure, databases, data collection, administration, output reports and statistics, personal data protection. 4. Use of information technologies in medicine. 5. Access to value information by the Internet, web databases, external KU databases. 6. Microsoft Office desktop version and online version - principle, similarity and difference of individual versions. 7. Text editors - advanced formatting, typesetting, tables and graphics tools. 8. Spreadsheets - cell formatting, table design, functions and calculations, graphs, presentation and graphics tools. 9. Graphic editors - acquisition, editing of image documentation. 10. Effective and rational acquisition of technical assistance in individual programs and systems.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1055W/22	Course title: Basics of Management and Economics in Health Care, Organisation of Health
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During semester: There will be at least one written test during semester, the maximum of 20 points can students achieve. Final evaluation: There will be oral or written test, students can reach 80 points. The overall points that student can obtained is 100. Course evaluation: A – 100 %-93 % B – 92 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %- 0 %	
Learning outcomes of the course: The aim of the course: Through the synthesis of acquired knowledge and skills to create a comprehensive and conceptual view of management and economic activities in health care, to be able to act preventively and think about effective economic thinking and action in the health team, department and the entire facility from the perspective of health care. Theoretical knowledge: Students are able to act preventively and think in matters of economic thinking and leadership of the medical team at the level of the outpatient clinic, department and the whole facility from the perspective of health care economics, know the issues and use of marketing and informatics in health care economics. Practical knowledge: Students are able to use knowledge of general economic laws in the practical activities of the health care provider, ensure economic efficiency while maintaining the quality of health care.	
Course contents: The structure of the course:	

1. Basics of management, definition, procedures, characteristics. Economic efficiency. Personal management. Marketing in healthcare
2. History of health care.
3. Healthcare - organization and health systems.
4. Healthcare and health services in the social market economy.
5. Forms and structure of medical facilities. Medical professions and their characteristics
6. Health care systems in individual EU countries and in some countries around the world.
7. Organization and methods of providing health services.
8. Financing of health care and methods of financing according to the type of care. Contributory and budgetary organizations.
9. Health insurance, types and basic characteristics
10. International cooperation in health care. WHO.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1010W/22	Course title: Biochemistry 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 3 hours per semester: 36 Teaching method: on-site	
Credits: 5	Working load: 125 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: there will be 4 written test at the lectures, for each of which it is possible to obtain a maximum of 20 points. To sit the exam, it is necessary to obtain at least 40 points from the written tests. At the final oral exam, the student can get max. 60 points. The final evaluation will be based on the total number of points obtained from the tests and the oral exam. Course evaluation: A - 100% -90% B - 89% -80% C - 79% -70% D - 69% -60% E - 59% -45% FX - 44% and less	
Learning outcomes of the course: Course objective - to acquire basic and necessary knowledge of organic and inorganic chemistry and biochemistry to understand other subjects of Biochemistry-2 and Biochemistry – LEM (Laboratory Examination Methods). Theoretical knowledge: description of basic chemical structures - simple and complex - occurring in the cell and in biological fluids in humans, both from a static and dynamic point of view, their interrelationship under physiological conditions and basic changes in disease states.	
Course contents: 1. Revision of the most important concepts of organic chemistry - functional groups and types of bonds 2. Structure and function of the main cellular components - cell topohistochemistry. 3. Water and acid-base balance. 4. Amino acids and structure of proteins. Relationship between function and structure of proteins. 5. Enzymes, mechanism of catalysis, kinetics, inhibition, regulation 6. Carbohydrates, classification and nomenclature, structure, glycosidic bonds, glycoproteins 7. Lipids and related compounds, fatty acids, phospholipids, eicosanoids, steroids, lipoproteins - structure and properties.	

8. Nucleic acids, DNA replication, RNA synthesis, translation mRNA-protein synthesis, recombinant DNA, regulation of gene expression.
9. Introduction to metabolism, glycolysis, alternative pathways of carbohydrate metabolism, ATP production, mitochondrial electron transport and oxidative phosphorylation, pentose cycle, Krebs cycle.
10. Fatty acid metabolism, metabolism of lipids and related compounds.
11. Metabolism of proteins, biosynthesis of amino acids and compounds derived from them, metabolism of amino acids
12. Vitamins and hormones

Learning outcomes of the course: Course objective: gaining an overview of knowledge about the used analytes for individual groups of diseases and diagnoses. Theoretical knowledge: Gaining comprehensive knowledge of methods commonly used in laboratory and clinical practice, the preparation of patients in the pre-analytical stage. The curriculum is divided according to individual organ systems and the main clinical conditions in them. The student will gain an overview not only of the pathobiochemistry of the conditions, but also of the indications for examination, conditions of material collection, transport, method of examination, control of test reliability, possible serious interferences affecting the result, reference values, method of interpretation.	
Course contents: Overview in test panels for the most clinically important indications: 1. laboratory parameters and preoperative preparation and postoperative monitoring, laboratory monitoring of patients at JIS 2. determination of inflammatory activity, indicators of various forms of inflammation - SIRS, MODS, monitoring of septic conditions	

3. Diagnosis of acute ischemic conditions in cardiology and laboratory differential diagnosis of hypertension, examination of renal function in these conditions
4. risk factors for atherosclerosis, disorders of lipoprotein metabolism and monitoring of treatment of these conditions
5. monitoring of nutritional status,
6. monitoring of acid base and homeostasis disorders, especially in acute conditions
7. monitoring of oncological patients and tumor markers,
8. examinations in endocrinology according to individual diagnostic algorithms - e.g. hypothyroidism, hyperthyroidism, hypo- and hypercortisolism, sterility, decreased function of the hypothalamic-pituitary system
9. diabetes monitoring, lab. monitoring complications of diabetes (nephropathy, etc.)
10. gastroenterological and hepatological examinations,
11. examinations in neurology and psychiatry - examination of cerebrospinal fluid
12. monitoring of a pregnant woman during pregnancy and mother and child in the perinatal period
13. laboratory examination in pediatrics; pediatric reference values - specificities
14. diagnosis and monitoring of osteoporosis; metaphylaxis of urolithiasis.
15. monitoring of drug concentrations, poisoning, determination of alcohol, drugs
16. examination of renal function, monitoring of dialysis patients, monitoring of patients with transplanted organs (especially kidneys, but also after other transplants)
17. oxidative stress monitoring
18. clinical conditions for which examination by molecular biological methods is appropriate / necessary

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1004W/22	Course title: Biology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the course: presence on the lectures. Final evaluation: written exam Course evaluation: A - 100% -91% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Aims of the course unit: The aim of the course is to acquaint students with basic knowledge of general cytology, cell morphology, physiology, molecular biology and general genetics. Theoretical knowledge: The student will gain basic theoretical knowledge about the structure and physiology of the cell, molecular biology, as well as general genetics. This knowledge belongs to the general basis that the student must acquire and is necessary for other professional subjects.	
Course contents: 1. Cell theory, chemical composition of the cell 2. Cell organization, Prokaryotic cell, Eukaryotic cells, 3. Cytoplasm, Biological membranes, Cell wall, Basics of microscopy 4. Membrane organelles (Cytoplasmic membrane, Nucleus, Mitochondria, Chloroplasts, Golgi apparatus, Endoplasmic reticulum, Vacuola, Lysosomes, Microthelium, Plastids), 5. Fibrillar organelles (Cytoskeleton, Centrioles), Non-membrane organelles (Ribosomes, Inclusions) Microscopy of cells, cell organelles, Microscopic preparations 6. Intercellular communication, uptake and expenditure of substances, cell bioenergetics 7. Cell cycle (Mitosis, Amitosis, Meiosis), Cell division microscopy, Presentation of seminar papers 8. Molecular biology, Chemical basis of heredity: DNA, RNA, Genetic code and its expression 9. Transcription, Translation, Native and permanent preparations 10. Autosomal, Gonosomal inheritance 11. Gene interactions, extranuclear inheritance, presentation of seminar papers 12. Mutagenesis (mutations, mutagenic and repair, gene, chromosome, genomic mutations), Quantitative and population genetics

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok					
Faculty: Faculty of Health					
Course code: KLVM/54L1019W/22		Course title: Clinical Practice 1			
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: hours per semester: 144s Teaching method: on-site					
Credits: 3		Working load: 75 hours			
Recommended semester/trimester: 1.					
Level of study: I.					
Prerequisites:					
Requirements for passing the course: During the semester: 100% participation					
Learning outcomes of the course: Course objective: To deepen theoretical knowledge about work and diagnostic procedures used in the field of biochemistry, hematology, immunology, pathology and microbiology, while acquiring practical skills Theoretical knowledge: students gradually gain an overview of the scope of work of individual workplaces, the spectrum of their diagnostics and at the same time learn the principles of individual methodologies Practical skills: students repeatedly practice some selected methodologies under the supervision of a lecturer					
Course contents: Gradually get acquainted with all workplaces: 1. with their daily operation, 2. with safety, fire and hygiene regulations 3. with documentation related to their work, 4. with current laboratory equipment, 5. with some selected examination methods of their routine diagnosis					
Recommended or required literature:

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1016W/22	Course title: Communication
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: students are actively involved in the teaching process (presentations, practice of verbal and nonverbal communication) in the practical mastery of the subject, participation in seminars must be - 100%, students will prepare a seminar paper with a presentation, where they will meet at least 60% criteria (formal page, content page, absence of errors in verbal and non-verbal expression, adherence to the time horizon of 5 minutes, method of submission). At the end of the presentation, the pros and cons, self-reflection are evaluated. If the criteria are not met, the student will not be admitted to the written part of the final exam. Final assessment: will be based on the fulfillment of the criteria within the exercises and the overall score obtained from the written form of the final exam.	
Learning outcomes of the course: Objective of the course - aims of the course unit: To acquire knowledge, skills in the field of interpersonal communication, to lead to communication skills in mutual interaction so that the student acquires competencies in the field of interpersonal communication. Point out mistakes that affect perception and communication. Training in solving problem situations in practice. Theoretical knowledge: The student defines communication, the basic division of concepts within communication. It characterizes the types of communication, masters the structure and principles of conversation, eliminates communication bad habits, acquires elements of empathy, describes the attributes of assertive communication. Practical skills: the student applies the acquired knowledge during theoretical teaching within the exercises, applies the acquired knowledge in the field of nonverbal and verbal communication, paralinguistic aspects of communication, assertiveness, empathy, evaluation and devaluation in practice.	
Course contents: 1. Characteristics of social communication, types and functions of communication 2. Nonverbal communication 3. Paralinguistic aspects of communication. 4. Verbal communication - characteristics 5. Rules of proper listening and understanding 6. Verbal expressions	

7. Interview - characteristics, structure of the interview
8. Questions in interviews
9. Forms and types of interviews
10. Empathy
11. Evaluation and devaluation
12. Assertiveness

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1008Y/22	Course title: English Language 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During semester: At the beginning of every seminar a short test from the previous lesson will take place. If a student will get A from all these tests (except one other mark than A (not FX) or one absence) the seminar will be automatically registered in the university system. The students, who will not meet this condition, must pass an oral exam in the exam period. The participation in the final exam is conditioned by a maximum of two absences during the semester or two FX from the tests. Course evaluation: A – 100 %-93 % B – 92 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %- 0 %	
Learning outcomes of the course: The aim of the course: To head the students towards individual work with the english text, to command the translation of an english medical text, to develop the students communication skills. Theoretical knowledge: The student is able to use grammar correctly during the conversation on the medical topic. Practical knowledge: The student can actively and promptly communicate in the hospital.	
Course contents: Vocabulary: The hospital team, hospital jobs. Verbs for describing jobs. Listening 1: An admission. Job interview. Language spot: Present simple and present continuous. The physiotherapist profession. Vocabulary: Hospital departments. Language spot: Prepositions of place and movement. Listening 1: Directions. Listening 2: The porter's office. Reading: The wheelchair. Vocabulary: The admissions procedure. Reading: It's my job - hospital receptionist. Vocabulary and Listening 1: Patient record form. Language spot: Past Simple versus Past Continuous. Writing: Patient summary

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1038W/22	Course title: Examination Methods in Biochemistry
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: there will be 3 written test at the lectures, for each of which it is possible to obtain a maximum of 20 points. To sit the exam, it is necessary to obtain at least 40 points from the written tests. At the final oral exam, the student can get max. 90 points. Presence min. at 10 lectures and at all practical sessions. The final evaluation will be based on the total number of points obtained from the tests and the oral exam. Course evaluation: A - 100% -90% B - 89% -80% C - 79% -70% D - 69% -60% E - 59% -45% FX - 44% -	
Learning outcomes of the course: Course objective: to provide theoretical knowledge and practical skills for mastering the examination of common analytes in the clinical biochemistry laboratory and at the same time to provide basic common knowledge of LEM for mastering selected laboratory methods in hematology, microbiology. Theoretical knowledge: bioanalytical chemistry in laboratory medicine and clinical biochemistry in particular, expression of analytical results, preanalytical phase and influence of possible interferences, basic principles of photometry, electromigration, separation, immunochemical methods; basic knowledge for the use of molecular biological methods. Information system in the laboratory, accreditation, certification Practical skills: theoretical background and their application for the determination of basic clinical-biochemical analytes	
Course contents: A. Theoretical background 1. Bioanalytical chemistry in laboratory medicine and clinical biochemistry in particular 2. Expression of laboratory analytical results.	

3. Pre-analytical phase, collection, transport, and storage of samples.
 4. Work safety in laboratories of laboratory medicine disciplines
 5. Quality management control, certification, accreditation, process maps.
 6. Refractometry, osmometry, examination of urine with strips manually and using urine analyzer
 7. Optical spectral methods, absorption and emission spectral methods, spectra, detection, division of instrumentation, automation,
 8. Buffers in bioanalytics, preparation, work with scales and analytical ones.
 9. Indicator reactions
 10. Enzymes in bioanalytics
 11. Immunochemical analyzes
 12. Biochemical analyzers
 13. Selected separation methods,
 14. Immunoanalytical methods especially turbidimetry, ELISA, chemiluminescence
- B. Practical application and selection or the possibility of using bioanalytical methods in the determination of common analytes with a more detailed description of the methodology

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1049W/22	Course title: Examination Methods in Biochemistry 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 3 hours per semester: 12 / 36 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites: KLVM/54L1038W/22	
Requirements for passing the course: During the semester: there will be 4 written test at the lectures, for each of which it is possible to obtain a maximum of 20 points. To sit the exam, it is necessary to obtain at least 40 points from the written tests. At the final oral exam, the student can get max. 90 points. Presence min. at 10 lectures and at all practical sessions. The final evaluation will be based on the total number of points obtained from the tests and the oral exam. Course evaluation: A - 100% -90% B - 89% -80% C - 79% -70% D - 69% -60% E - 59% -45% FX - 44% -	
Learning outcomes of the course: Course objective: 1-to provide theoretical knowledge and practical skills for the evaluation of examinations of common analytes in the clinical biochemistry laboratory and at the same time to provide basic common knowledge of LEM for the evaluation of laboratory work in hematology, microbiology. Information system in the laboratory, accreditation, certification, basics of chemometrics, 2-basic and selected more demanding laboratory procedures in molecular-biological diagnostics. Theoretical knowledge: theory of reference values, basics of chemometrics, Practical skills: application of selected statistical methods for the determination of basic clinical-biochemical analytes, mastering the principles of certification and accreditation of the laboratory and application to selected analytes	
Course contents: A. Basics of molecular genetics important for clinical practice 1. Analytical methods used in clinical molecular genetic diagnostics - an overview 2. Isolation of nucleic acids	

3. Actual analytical procedures, reverse transcription, electrophoretic procedures, amplification methods, hybridization methods
 4. Basic instrumentation - thermocyclers, instruments for RT-PCR
 5. Methods of restriction fragment analysis, PCR and RT-PCR
 6. Overview of clinically significant and currently investigated polymorphisms
- B. Basics of chemometrics:
7. Basic statistical concepts, averages,
 8. Theory of errors, distribution of random variables, frequency functions, exploratory analysis of one-dimensional data, quantiles, sample size,
 9. Hypothesis testing, correlation, and regression analysis.
 10. Theory of reference values and an example of a practical approach to their creation (supplied data) statistical processing of epidemiological studies.
 11. Quality control, statistical programs in the daily routine activities of laboratories
- C. Accreditation processes, certification and process map
12. Preparation of the laboratory for accreditation and re-accreditation

Recommended or required literature:

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1037W/22	Course title: Examination Methods in Haematology and Transfusion
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 12 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: there will be two written examinations / practical exams in the lectures (a maximum of 25 points can be obtained for each). To participate in the exam, it is necessary to obtain at least 25 points from the examinations and practical exams. At the final written exam, the student can get max. 50 points. Final evaluation: will be based on the total number of points obtained from examinations, practical tests and a written test. Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Course objective: Acquisition of basic knowledge in the field of laboratory hematology and transfusiology with emphasis on the pre-analytical and analytical phase of blood sampling and examination. Ability to prepare and microscopic evaluation of peripheral blood and bone marrow smears with the possibility of using special cytochemical examinations. Application of complex knowledge in the evaluation of laboratory tests. Theoretical knowledge: The student defines and identifies the individual phases of the laboratory examination. It describes the possibilities of counting blood cells using cytochemical examinations. It evaluates aspects of additional examinations, analyzes and compares theoretical knowledge with the achieved examinations. Practical skills: Performs basic blood tests, microscopic and special cytochemical tests. Addresses interferences and discrepancies in laboratory tests. Comprehensively demonstrates knowledge in diagnostic units.	
Course contents:	

1. Lectures: Quality control in the hematology laboratory - internal and external quality control
Exercises: Practical application of SI units in the laboratory.
2. Lectures: Pre-analytical phase of the examination - blood collection, transport of material, preparation and processing of biological material before the examination. Anticoagulant solutions.
Exercises: Pre-analytical, analytical and post-analytical phase in the hematology laboratory, ensuring identification and traceability during the entire laboratory process, preparation of samples for analysis, centrifugation and sorting. Collection, transport, processing and storage of blood samples. Blood sampling.
3. Lectures: Blood count, Possibilities of counting blood cells (microscopic determination, electronic counting of blood cells, automatic analyzers. Parameters of blood cells.
Exercises: General principles of blood cell counting. Counting erythrocytes, leukocytes, platelets, eosinophils, reticulocytes. Counting in chambers (Burker, Neubauer and Nageotte chambers).
4. Lectures: Differential leukocyte budgeting.
Exercises: Technique of paint determination, paint evaluation.
5. Lectures: Interferences in hemograms.
Exercises: examples of interferences and their evaluation.
6. Seminar: Interpretation of hematological results. Written examination and practical exam.
7. Lectures: Cytochemical examination (phosphatases, esterases, peroxidases, glucuronidases), iron staining, PAS reaction, Sudan black.
Exercises: practical laboratory diagnostics.
8. Lectures: Cytology and histology of bone marrow, lumbar puncture, punctures from other organs and body fluids. Other morphological examinations (Heinz bodies, basophilic erythrocyte spotting, schistocytes, non-segmented granulocytes, L.E. cells, lymphocytes in phase contrast).
Exercises: practical laboratory diagnostics.
9. Seminar: Interpretation of peripheral blood and bone marrow smears. Written examination.
10. Lectures: Tests for the diagnosis of anemia - basic examination for hemolytic anemia (general tests, tests for the detection of abnormal hemoglobin, tests for the detection of enzyme deficiency, examination for osmotic resistance).
Exercises: practical laboratory diagnostics.
11. Lectures: flow cytometry, cytogenetic and molecular genetic examination methods.
Exercises: practical aspects of flow cytometry, cytogenetic and molecular genetic examinations.
12. Seminar: Interpretation of laboratory results Written examination and practical exam.

Learning outcomes of the course: Course objective: Acquisition of basic knowledge from the field of laboratory hematology and transfusiology with emphasis on immunohematological examinations of patients and blood donors. Ability to test the blood group of anti-erythrocyte antibodies and to examine compatibility. Theoretical knowledge: The student defines the issues of immunohematology. It identifies the group system of erythrocytes and describes the possibilities of antibody screening. Evaluates compatibility testing, defines the need for examination of blood donors. Analyzes and compares theoretical knowledge with the achieved examinations. Practical skills: Performs immunohematological examinations of blood groups and antibody screening. Identifies specific antigens and evaluates compatibility tests. Addresses interferences and discrepancies in laboratory tests. Comprehensively demonstrates knowledge in diagnostic units.	
Course contents: 1. Lectures: examination of platelet function and biochemistry. Exercises: practical laboratory	

diagnostics.

2. Lectures: systems and methods for examination of hemostasis. Exercises: practical laboratory diagnostics.

3. Lectures: coagulation examination for diagnostic purposes I.

Exercises: principles of coagulation examinations.

4. Lectures: coagulation examination for diagnostic purposes II.

Exercises: special coagulation examinations.

5. Seminar: Interpretation of hemostasisological examinations.

6. Lectures: Immunohematological examinations - determining the blood group of patients.

Antibody screening.

Exercises: practical laboratory diagnostics.

7. Lectures: Immunohematological examinations - determining the blood group of blood donors.

Antibody screening.

Exercises: practical laboratory diagnostics.

8. Lectures: direct and indirect antiglobulin test.

Exercises: practical laboratory diagnostics.

9. Lectures: compatibility test, Immunohematological examination of newborns and children up to 4 months of age.

Exercises: practical laboratory diagnostics.

10. Lectures: Documentation ("Request for Blood Preparation and Pre-Transfusion Examination", "Transfusion Record", "Transfusion Response Report", "Questionnaire for Blood, Plasma and Blood Cell Donors". Exercises and Seminar: Documentation blood product and pre-transfusion examination ", " Transfusion record ", " Transfusion response report ", " Questionnaire for blood, plasma and blood cell donors ".

11. Lectures: serological examination of a blood donor. Immunohematology of leukocytes and platelets.

Exercises: practical laboratory diagnostics.

12. Seminar: Interpretation of immunohematological laboratory results Written examination and practical examination.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1051W/22	Course title: Examination Methods in Histology and Cytology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 3 hours per semester: 12 / 36 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: Active participation in lectures. To participate in the exams, it is necessary to attend for min. 10 lectures and successful completion of 1 continuous written evaluation. Final evaluation: based on the evaluation of the number of these points obtained from the written exam (test) Course evaluation: A - 100% -91% B - 92% - 85% C - 84% - 77% D - 76% -69% E - 68% - 60% FX - 59% - 0%	
Learning outcomes of the course: Objective of the course - aims of the course unit: To teach various methods of histological processing of tissues and special examinations, including immunohistochemical methods and methods of molecular biology, in order to identify structural abnormalities. Also acquaintance with cytological methods, identifying functional and structural changes of cells, especially by detecting early stages of cancer and interpretation of cell elements. Theoretical knowledge: student defines, distinguishes, describes and identifies the basic concepts in the subject of examination methods in histopathology and cytology with their subsequent synthesis and application of knowledge in other professional subjects Practical skills: The student acquires the acquired theoretical knowledge in practice and gains practical experience in the implementation of examination methods in histopathology and cytology.	
Course contents: 1. Material processing, including fixation, basic staining methods 2. Methods for imaging connective tissue 3. Methods for representation of inorganic substances and pigments 4. Methods in neurohistology	

5. Methods for the detection of carbohydrates, lipids, enzymes 6. Methods of fluorescence microscopy 7. Methods of immunohistochemistry and molecular biology 8. Gynecological cytology 9. Non-gynecological cytology - nervous system, gastrointestinal system 10. Non-gynecological cytology - genitourinary system, respiratory system 11. Non-gynecological cytology - mammary gland, lymph nodes 12. Non-gynecological cytology - body fluids

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1031W/22	Course title: First Aid
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During semester: During semester there will be a written test in exercises, the student can gain 40 pts maximum. To participate in the exam, it is necessary to gain at least 20 pts from test. In the final exam, the student can gain 60 pts maximum. Final evaluation: The final evaluation will be based on the total points gained from test and oral exam. The subject evaluation: A – 100 % - 93 % B – 92 % - 85 % C – 84 % - 77 % D – 76 % - 69 % E – 68 % - 61 % FX – 60 % - 0 %	
Learning outcomes of the course: To analyse system, organisation, law aspects of the first aid, to know the general principles of the first aid and to develop professional knowledge and skills of the students of the study programme and to use the modern methods of work in this field. Theoretical knowledge: The student has a knowledge of the urgent medicine, masters cardiopulmonary resuscitation, is able to orientate oneself in providing of the first aid and in case of the other acute conditions. Practical skills: to master procedures, the algorithm of the first aid in the sudden states and special situations. To know the law aspects, system and organisation of the first aid.	
Course contents: 1. The introduction of the subject, the basic terms of the first aid. 2. Pre-hospital urgent healthcare. 3. The system, organisation, law aspects, and general principles of the first aid. 4. The organisation, technique and protocols of the first aid in case of the mass accidents and special situations (material equipment and show). 5. History, phases, grades and procedures of urgent cardiopulmocerebral resuscitation. 6. Algorithms of the urgent resuscitation of adults and children. 7. The first aid in case of sudden states and training of first aid providing. 8. The first aid in the gynecology and obstetrics. 9. The complications in the CPR. 10. Ethic problems in the resuscitations. 11. The most common types of poisoning and the first aid in these cases. 12. The antidote and tools.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: DEKZ/54Z2001W/22	Course title: Focus on Spirituality - Spirituality of Truth
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) active participation of the student during the spirituality concentration program, participating in discussions, working in groups, participating in cultural, spiritual formation and volunteer activities (60-100%). b) final assessment: Elaboration of an essay on 1 standard page of A4 format and its presentation at a personal colloquium (60-100%). The final assessment of the subject corresponds to the verbal assessment: Passed/Not passed. Credit is awarded to a student who obtained a minimum of 60 out of 100% from the subject for fulfilling the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: The student has knowledge about the true meaning of life and human identity. • Skills: The student can identify the true meaning of life and characterize sin and its consequences. • Competencies: The student is ready to transform the knowledge of the meaning of life into bearing witness to the truth. 	
Course contents: What it is about - the meaning of life. Human identity. God's love as the reason for creation and the principle of new life. Knowledge and consequences of sin. Jesus Christ as the way, the truth and the life. The importance of bearing witness to the truth.	
Recommended or required literature: <ol style="list-style-type: none"> 1. Encyklika pápeža Benedikta XVI. CARITAS IN VERITATE. 2009. Trnava: Spolok sv. Vojtecha, 2009, 118 s. COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1040W/22	Course title: Genetics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester, there will be two written examinations within the lectures. It is possible to obtain a maximum of 20 points from each. To participate in the final written exam, it is necessary to obtain at least 20 points from the examinations. The final evaluation will be based on the total number of points obtained from the written exam. Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Aims of the course: To provide knowledge of basic genetic concepts, basics of human genetics, genetic diseases and ethical principles in genetics. Theoretical knowledge: students will learn selected parts of general genetics and get acquainted with the pathogenesis, diagnosis, genetic prognosis of genetic pathological conditions	
Course contents: 1. Genetics as a discipline, basic concepts, 2. Molecular basis of genetics 3. Mutations 4. Genetically determined pathological conditions (monogenic diseases) 5. Genetically determined pathological conditions (chromosomal aberrations) 6. Pathological conditions with multifactorial type of inheritance 7. Genetic disorders of somatic cells 8. Genetic testing methods 9. Prenatal genetic diagnostics (indications, methods) 10. Screening of genetic diseases 11. Prevention of genetic diseases 12. Ethical problems in genetics

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1018Y/22	Course title: German Language
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites: KLVM/54L1009Y/22	
Requirements for passing the course: Conditional subject: German language 1 During semester: At the beginning of every seminar a short test from the previous lesson will take place. If a student will get A from all these tests (except one other mark than A (not FX) or one absence) the seminar will be automatically registered in the university system. The students, who will not meet this condition, must pass an oral exam in the exam period. The participation in the final exam is conditioned by a maximum of two absences during the semester or two FX from the tests. Course evaluation: A – 100 %-93 % B – 92 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %- 0 %	
Learning outcomes of the course: The aim of the subject: To head the students towards individual work with the german text, to command the translation of a german medical text, to develop the students communication skills. Theoretical knowledge: The student is able to use grammar correctly during the conversation on the medical topic. Practical knowledge: The student can actively and promptly communicate in the hospital.	
Course contents: 1. The Body parts. 2. Treatment interview and methods. 3. Health problems. The pain interview. 4. Grammar: subordinate clauses. 5. The digestive system. 6. Medicine history: Wilhelm Conrad Röntgen. 7. Medical history: Jan Jesenius. 8. The cells and the tissues. 9. Grammar: modal verbs. 10. Measurement. The numbers 1-1000. Use of measuring instruments. 11. Documentation in the hospital. 12. Abdominal organs.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1033Y/22	Course title: German Language 3
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites: KLVM/54L1018Y/22	
Requirements for passing the course: During the term: Active participation in lessons. During the lessons the students are expected to show the knowledge about current medical issues in foreign language as acquired from media or Internet and compare such information with topics specified in the brief subject curriculum. Students pay attention to grammar reference and write grammar exercises as required by the teacher. Subject marking: A – 100 %-93 % B – 92 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %- 0 %	
Learning outcomes of the course: Aim of the subject: The aim of the subject is to guide students to acquiring the capability to understand the text in foreign language without outside help, to master the rules of correct translating and to gain communicative skills. Students are to learn professional vocabulary and apply communicative skills when talking about topics determined in brief subject curriculum. Theoretical achievement: Students are able to apply grammar references specified in brief subject curriculum correctly when talking about individual topics. Practical achievement: Students are able to communicate actively in foreign language with the patient and are able to distinguish the differences between local environment and the environment abroad.	
Course contents: Messen und notieren die Zahlen, Messgeräte. Zu hohe und zu niedrige Werte. Kurvendokumentation. Die Bauchorgane. Die Grammatik: Positionen im Satz. Das Aufnahmegespräch. Die Pflegeanamnese, die Hilfsmittel. Das Anamnesegespräch. Die Erkrankungen. Die Grammatik: Perfekt und Satzklammer. Die Atmungsorgane. Die Vorbereitung zur Operation. Die Operation. Die Übergabe aus dem OP. Die erste postoperative Visite. Die Grammatik: Zeitangaben.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1025W/22	Course title: Haematology and Transfusion Study 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 3 hours per semester: 36 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: the lectures will include two written examinations (for each it is possible to obtain a maximum of 15 points) and a presentation of the topic prepared by the students (at the end of the semester - a maximum of 10 points can be obtained). To participate in the exam, it is necessary to obtain at least 20 points from the exams and presentation. At the final written exam, the student can get max. 60 points. Final evaluation: will be based on the total number of points obtained from the examinations, presentation and written exam. Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Course objective: Acquisition of basic knowledge in the field of hematology and transfusiology with emphasis on the physiology of hematopoiesis, red and white blood cells - development, division, metabolism, quantitative and qualitative non-oncological and oncological disorders. Theoretical knowledge: The student defines hematopoiesis, identifies individual stages and developmental boards. It describes the cellular elements of the blood, determines the individual features, distinguishes developmental successions. Identifies physiological functions, breakdowns and compares pathological units.	
Course contents: 1. Physiology of hematopoiesis (origin and development of hematopoiesis, development of blood cells - red, white blood cells, platelets) 2. Red blood cells (erythrocyte) - development, structure, metabolism, shape changes 3. Anemia from disorders of erythrocyte formation, iron metabolism	

<p>4. Anemia from increased erythrocyte loss, acute posthemorrhagic anemia.</p> <p>5. Written examination. White blood cell (leukocyte) development, division, function</p> <p>6. Quantitative and qualitative disorders of the leukocyte system</p> <p>7. Acute leukemia</p> <p>8. Myelodysplastic syndrome, Myeloproliferative neoplasia, Polyglobulia</p> <p>9. Hodgkin's lymphoma, NHL part 1</p> <p>10. NHL part 2 (CLL, plasmacytoma).</p> <p>11. Written examination. Seminar: Elaboration and presentation of set topics I.</p> <p>12. Seminar: Elaboration and presentation of set topics II.</p>

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1036W/22	Course title: Haematology and Transfusion Study 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites: KLVM/54L1025W/22	
Requirements for passing the course: During the semester: the lectures will include two written examinations (for each it is possible to obtain a maximum of 15 points) and a presentation of the topic prepared by the students (at the end of the semester - a maximum of 10 points can be obtained). To participate in the exam, it is necessary to obtain at least 20 points from the exams and presentation. At the final written exam, the student can get max. 60 points. Final evaluation: will be based on the total number of points obtained from the examinations, presentation and written exam. Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Course objective: Acquisition of basic knowledge in the field of hematology and transfusiology with emphasis on the issue of platelets, physiology and pathology of blood clotting. Gaining knowledge of immunohematology of blood cells, blood donation and purposeful hemotherapy. Theoretical knowledge: The student defines platelets, identifies the various stages of blood clotting and its disorders. It describes the immunological aspects of blood elements, determines individual features, distinguishes clinical consequences. It identifies the problem of blood donation, breaks down and compares individual transfusion drugs, determines the effectiveness of hemotherapy and its side effects.	
Course contents: 1. Platelets (platelets) - development, composition, function, 2. Quantitative and qualitative platelet disorders. 3. Physiology of blood clotting (vessels and vascular system, primary hemostasis, system of	

- coagulation factors, system of natural inhibitors, fibrinolytic system)
4. Disorders of primary hemostasis - quantitative and qualitative disorders, drug hemostyptic treatment. Congenital bleeding conditions
 5. Congenital thrombophilia, acquired blood clotting disorders.
 6. Written examination. Erythrocyte immunology (general immunology, blood groups)
 7. Hemolytic disease of the newborn, autoimmune and alloimmune hemolytic anemia
 8. HLA system, leukocyte and platelet immunology, stem cell transplantation
 9. Production of transfusion drugs (blood donation, donor, autotransfusion, principles of production of transfusion drugs, basic division of transfusion drugs, quality control in transfusion service facilities
 10. Hemotherapy (history of blood treatment, transfusion drugs, treatment with transfusion drugs, complications of hemotherapy, hemovigilance, crisis blood policy)
 11. Written examination. Seminar: Elaboration and presentation of set topics I.
 12. Seminar: Elaboration and presentation of set topics II.

Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 12 / 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the course: During the semester: Active participation in lectures. To participate in the exam, it is necessary to participate for min. 10 lectures and successful completion of 1 continuous written evaluation. Final evaluation: will be based on the evaluation of the total number of points obtained from the written exam (test) Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Objective of the course - aims of the course unit: To teach the basics of histological technique and to learn to know tissues practically. a) Basic histological technique: histological laboratory equipment. b) Processing of biological material for histological purposes. Fixation - principle and types of fixation. Basic paraffin technique. Practical preparation of paraffin histological sections. Theoretical knowledge: student defines, distinguishes, describes and identifies the basic concepts in the subject of histological techniques with their subsequent synthesis and application of knowledge in other professional subjects Practical skills: The student acquires the acquired theoretical knowledge in practice and gains practical experience in the operation of the histological laboratory and basic histological techniques	
Course contents: 1. Department of pathological anatomy - basic division 2. Laboratory part of the department of pathological anatomy 3. Biopsy laboratory part	

4. Biopsy material - types of material, methods of collection 5. Receipt of biopsy material 6. Excision of biopsy material 7. Pouring the material into paraffin 8. Cutting histological specimens 9. Staining of histological specimens (basic staining of HE) 10. Completion of histological specimens 11. Errors arising in the process of processing biopsy material 12. Information bringing biopsy examination

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1035W/22	Course title: Histological Techniques 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 12 / 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites: KLVM/54L1027W/22	
Requirements for passing the course: Conditions for completing the course: During the semester: Active participation in lectures. To participate in the exam, it is necessary to participate for min. 10 lectures and successful completion of 1 continuous written evaluation. Final evaluation: will be based on the evaluation of the total number of points obtained from the written exam (test) Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Objective of the course - aims of the course unit: To learn the system and methodical procedure of material processing during perioperative biopsy, processing of cytological material, dispatch of results from the department of pathological anatomy, acquaintance with NIS. Theoretically master the processes of staining of biopsy and cytological material and get acquainted with the essence of immunohistochemical methods. Theoretical knowledge: student defines, distinguishes, describes and identifies the basic concepts in the subject of histological techniques with their subsequent synthesis and application of knowledge in other professional subjects Practical skills: The student acquires the acquired theoretical knowledge in practice and gains practical experience in basic and special histological techniques	
Course contents: 1. Perioperative biopsy I. part 2. Perioperative biopsy II. section 3. Cytological material - types of material, methods of sampling	

4. Receipt of cytological material 5. Processing of cytological material 6. Errors arising in the process of processing cytological material 7. Dispatch of results of biopsy and cytological examinations 8. NIS 9. Basic biopsy and cytological staining 10. Special biopsy staining I. part 11. Special biopsy staining II. section 12. Immunohistochemical methods in pathology

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVN/54L1028W/22	Course title: Immunology and Examination Methods in Immunology 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the course: During the semester: Students will present, in the form of a Powerpoint, one independently processed topic related to the lectured issues, for which it is possible to obtain a maximum of 10 points. They will also write 1 written test for which it is possible to obtain a maximum of 20 points. To participate in the final exam, it is necessary to obtain at least 15 points in this way. At the final exam, the student can get max. 70 points. The final evaluation will be based on the total number of points obtained from the examination, presentation and oral examination. Course evaluation: A – 100 %-92 % B – 91 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %-0 %	
Learning outcomes of the course: Learning outcomes: Course objective: Acquisition of basic knowledge of general and clinical immunology Theoretical knowledge: Students are able to analyze and synthesize the acquired knowledge so that their activities help clinical and therapeutic activities for the benefit of the patient.	
Course contents: Contents of the course 1. Introduction to immunology. Function and importance of the immune system (IS). IS morphology - organs, tissues, cells and IS molecules. 2. Types of immune mechanisms. Comparison of non-specific and specific immunity. Non-specific components of the immune system. Phagocytosis. 3. Complement. Complement activation pathways. Cytokines - functions, properties and	

- distribution. Inflammation - involved cells and molecules (inflammatory mediators).
4. Antigens - properties, functional characteristics, the most important human antigens. Antigens blood groups.
 5. The major histocompatibility complex – structure, biological and medical significance. Differential antigens. Apoptosis - programmed cell death.
 6. Specific immune response. B lymphocytes and antibody production. Immunoglobulins – structure and properties. B-cell subpopulations. Monoclonal antibodies.
 7. T cells of key cell specific cellular immunity. Presentation of antigens. Cells with non-specific cytotoxic activity.
 8. Mucosal and cutaneous immune system. Anti-infective immunity.
 9. Hypersensitivity Reactions (Types I, II, III, IV)
 10. Autoimmunization and autoimmune diseases.
 11. Primary and secondary immunodeficiencies. Antitumor immunity.
 12. Tissue and organ transplantation.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVN/54L1039W/22	Course title: Immunology and Examination Methods in Immunology 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 12 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites: KLVN/54L1028W/22	
Requirements for passing the course: Conditions for completing the course: During the semester: Students will present one independently processed topic related to the lectured issues (in the form of a Powerpoint), for which it's possible to obtain a maximum of 10 points. They will also write 1 written test for which it is possible to obtain a maximum of 20 points. To be able to participate in the final exam, it is necessary to obtain at least 15 points in this way. At the final exam, the student can get max. 70 points. The final evaluation will be based on the total number of points obtained from the written examination, presentation and oral examination. Course evaluation: A – 100 %-92 % B – 91 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %-0 %	
Learning outcomes of the course: Learning outcomes: Objective of the course—become acquainted with: 1. Basic and special examination procedures and laboratory methods used in clinical immunology and allergology in practice. 2. Examination algorithms in the diagnosis of immunopathological conditions. 3. Quality control, with the management and economics of immuno-allergological laboratories. 4. Laboratory information systems. Theoretical knowledge: 1. The graduate will understand the basic principles and concepts of laboratory medicine in the field of immuno-allergology. 2. Gain knowledge of factors that may affect the reliability of immuno-allergological examination methods in the indicative pre-analytical and interpretive phase of the examination. 3. Gain knowledge of safety measures and health protection when working with biological	

material in laboratories.

4. Acquire theoretical knowledge necessary for quality control management, basic knowledge in connection with the management and economics of immuno-allergological laboratories, with the application of laboratory and hospital information.

Practicals skills:

1. The graduate is able to work independently in the laboratories of clinical immunology and allergology.

2. He/She will gain practical knowledge of working with devices that are used in immuno-allergol. lab. - such as flowcytometer, fluorescence microscope, ELISA reader, nephelometer, immunoanalyzers.

3. He/She has the ability to organize work in the laboratory, to cooperate with clinical workplaces in solving diagnostic and therapeutic problems within treatment and prevention process.

Course contents:

Course contents

1. Methods used to investigate components of humoral immunity (principle of methods, their pitfalls, application, instrumentation and economic balance sheet).

General principles of antigen-antibody reaction. Electrophoresis and immuno electrophoresis, radial immunodiffusion, nephelometry and turbidimetry, agglutination and hemagglutination.

2. Complement fixation tests. Immunoreactions with labeled antibodies - RIA, ELISA, EIA.

3. Immunoblotting, immunofluorescence, determination of antibodies and antigens by flow cytometry.

4. Methods used to investigate the components of cellular immunity (principle of methods, their pitfalls, application, instrumentation and economic balance sheet). Cell isolation techniques, flowcytometry.

5. Rosette tests, lymphocyte proliferation, ELISPOT, cytotoxic tests.

6. Phagocytosis, bactericidal test, oxidative flare tests: NBT, INT, chemiluminescence.

7. Immunohistochemical methods, methods of molecular biology.

8. Possibilities of investigation of components of immunity.

Examination of humoral immunity parameters - antibodies, monoclonal proteins, cryoglobulins, immunocomplexes, acute phase proteins, complement and its components, autoantibodies.

9. Examination of cellular immunity parameters. Determination of surface features of lymphocytes, functional lymphocyte tests, cytotoxicity of NK cells and T lymphocytes, determination of cytokines. Phagocytosis, chemotaxis, oxidative metabolism, phagocyte microbicides. Basophil activation test, examination of apoptosis, HLA typing.

10. Investigation algorithms at diagnosis of immunopathological conditions.

Diagnosis of immunodeficiencies.

Diagnosis of autoimmune diseases.

Diagnosis of allergic diseases.

11. Quality system in the immunological laboratory.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1013W/22	Course title: Laboratory Techniques
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 12 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for the course: There will be two written examinations in the exercises, a maximum of 20 points for each. The final evaluation: will be based on the total number of points obtained from the examinations and the ongoing evaluation of the activity at each laboratory exercise.	
Learning outcomes of the course: Students will be introduced to the main theoretical principles and the practical way of performing individual laboratory operations and methods. They will learn the principles of safety at work in a chemical laboratory, familiarize themselves with the materials used in the laboratory and their use. They are able to clarify theoretical aspects of basic laboratory operations, operations and principles of laboratory methods of synthesis and chemical analysis. They will also acquire basic, skill and habits in the chemical laboratory, practicing basic chemical operations in general and inorganic chemistry, physical chemistry, organic matter synthesis, and analytical chemistry.	
Course contents: Course contents: 1. Introduction and organization of exercise. Principles of safety at work with chemical substances. 2. Chemical laboratory equipment and fire protection Materials used in the laboratory and basic laboratory tools. 3. Nature of chemical substances used in chemical laboratory. Working with gases. 4. Measurement of weight, volume and density. Calibration of measuring containers. 5. Solubility, effect of temperature on solubility, dissolution, preparation of solutions, saturated solution solubility curve. 6. Preparation of insoluble matter, precipitation, decantation, filtration, drying. 7. Working with glass, measuring temperature, heating, cooling, phase conversion, determination of melting point, boiling point. 8. Principles of construction of laboratory apparatuses. 9. Crystallization, sublimation 10. Distillation, fractional distillation and boiling point. 11. Determination of acid-base equivalence point, acid-base indicators, solution preparation and pipetting.	

12. Determination of water in crystalline hydrates, heating and annealing.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1007W/22	Course title: Latin Language
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: Individual or group work on exercises with active solution of model situations and practical mastery of the subject. Final assessment: The written form of the final exam includes the curriculum of the whole semester, in which students demonstrate the level of their knowledge. At the written final exam, the student can get max. 60 points. 100% active participation in the exercises is required for admission to the exam, any non-participation must be justified or replaced at another date of the exercise in parallel disciplines. Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Objective of the course - aims of the course unit: To obtain a minimum of Latin grammar, which is a condition for mastering the basics of Latin medical terminology. Theoretical knowledge:: The student has to demonstrate knowledge of medical terminology in Latin-Greek form with an inner understanding of its structure. Practical skills: The student should be able to use the acquired knowledge in practical professional activities, in the study of professional literature and in parallel professional subjects, to use medical terminology accurately and linguistically in oral and written form.	
Course contents: 1. Historical and linguistic introduction to medical Latin, Latin and Greek in medical nomenclature, structure of multiword terms. 2. Latin pronunciation, basic grammatical terms, practice of correct reading of Latin medical terms. 3. Declension of nouns with a focus on the frequency of the genitive, the accusative and the ablative. 4. Adjectives, their declension and connection with nouns, use of degrees.	

5. Adverbs, use of prepositions in medical terminology and their connection with nouns in accusative and ablative.
6. Numerals, their use and declension, expression of quantity.
7. Verbs in pharmaceutical terminology, recipe.
8. Latin and Greek prefixes and suffixes, terms with Latin and Greek basis.
9. Greek equivalents of basic anatomical terms and terminology used in the clinic. Advocacy of suffixes.
10. Compound words. Principles of composite formation. Simple diagnoses.
11. Latin sentences still valid today. Active work with terminological expressions.
12. Practical exercises and tasks, creating multiword terms and automation of common connections.
13. Systematization and verification of acquired knowledge.

Requirements for passing the course: Prerequisites and co-requisites: During the semester: During the semester active participation in lectures. Within the lectures, students analyze the assigned topics. Final assessment: In the final oral exam, the student can get a maximum of 60 points - answers 3 questions from three topics - general health legislation, competencies of a health worker and a case study. Course evaluation: A - 100% - 93% B - 92% - 85% C - 84% - 77% D - 76% - 69% E - 68% - 60% FX - 59% - 0%	
Learning outcomes of the course: Objective of the course - aims of the course unit: Importance of social and health legislation, rights and their function in society, their application to health care, acquisition of basic concepts, rights and competences, legal responsibility of a health worker and definition of his competence. Theoretical knowledge: To teach students to understand the basics of law, social and health legislation, legal aspects and competencies of health professionals. The student will gain comprehensive knowledge and skills in accessing case studies from clinical practice.	
Course contents: Basic legal concepts. Fundamental human rights and freedoms. Labor law of health professionals. Labor liability for damage. Criminal liability for damage. Legal aspects of health care. Legal status of a healthcare professional. Health standards, patients' rights and medical records. Protection and promotion of public health. Health and safety at work. Administrative procedure - legal aspects. Case clinical studies.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1011W/22	Course title: Microbiology 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 5	Working load: 125 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester there will be two written tests. A student may get a maximum of 20 points on each test (total of 40 points). To be allowed to take the final exam, a student must earn a minimum of 20 points (cumulative from both tests). The final mark will be determined by the number of points received on the final exam. Course grade scale: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%- 0%	
Learning outcomes of the course: Course objectives: (i) to give students basic knowledge in the field of medical microbiology; (ii) to clarify the inter-disciplinary character of the course Theoretical knowledge: students will master the basics of general microbiology as well as other selected chapters from the special bacteriology Practical skills: students will (i) learn the principles and proper procedures for collecting clinical samples and transporting infectious substances to the lab, (ii) master basic processing and inoculation of infectious substances, (iii) learn how to prepare samples and analyse the results of microscopic examination	
Course contents: Course contents: 1. Introduction to Microbiology 2. Taxonomy, bacterial cell structure 3. Pathogenicity and virulency, infection 4. Normal bacterial flora 5. Diagnostic microbiology 1 6. Diagnostic microbiology 2 7. Antimicrobial substances	

8. Nosocomial infections 9. General epidemiology 10. Special epidemiology of bacterial infections 1 11. Special epidemiology of bacterial infections 2 12. Special epidemiology of bacterial infections 3

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1029W/22	Course title: Nuclear Medicine
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: Attendance at lectures. The final evaluation: Oral exam. Subject evaluation: A – 100% - 91% B – 92% - 85% C – 84% - 77% D – 76% - 69% E – 68% - 60% Fx – 59% - 0%	
Learning outcomes of the course: The objective of course: To characterize the nuclear medicine. To explain the basic diagnostic and therapeutic methods of nuclear medicine. To characterize the work with the open radioactive emitters, with radiopharmaceuticals. The student get knowledge about the device equipment of nuclear medicine. The use of methods in clinics. Theoretical knowledge: The student defines the principle of diagnostic and therapeutic methods of nuclear medicine.	
Course contents: Charakteristika odboru nukleárna medicína. Rozdelenie diagnostických a liečebných metód nukleárnej medicíny. Rádiofarmaká, výroba rádionuklidov, zásady práce v rádiofarmaceutickom laboratóriu. Príprava rádiofarmák, kalibrácia dávok. Rádiosaturačné metódy. Rádioimunoanalýza v onkológii. Delenie nádorových markerov, nádorové markery pri jednotlivých karcinómoch, využitie nádorových markerov v skriningu u zdravých jedincov, na monitorovanie liečby, na stanovenie prognózy. Prístrojová technika v nukleárnej medicíne, scintilačný detektor, súpravy na in vivo a na in vitro meranie vzoriek. Gamakamera-SPECT –jednofotónová emisná počítačová tomografia. PET- pozitronová emisná tomografia. Ochrana pred ionizujúcim žiarením. Choroba z ožiarenia. Využitie SPECT a PET vyšetrenia v medicíne (v onkológii, v kardiológii, v neurológii a pod.).

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1015W/22	Course title: Pedagogy, psychology, and sociology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 3 / 0 hours per semester: 36 / 0 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During semester: Active participation in the lectures (50% minimum) and exercises (100%); 3 successful continuous tests (100-65% to pass). Final evaluation will be based on the total points gained from the final written exam. The subject evaluation: A – 100 % - 93 % B – 92 % - 85 % C – 84 % - 77 % D – 76 % - 69 % E – 68 % - 60 % Fx – 59 % - 0 %.	
Learning outcomes of the course: The course objective: To provide the students the theoretical basis of psychology, which can apply in the healthcare practice. Theoretical knowledge: The student characterize the psychological natural relations, acquire the basic terms of general, cognitive and developmental psychology, psychology of personality and understands the psychical regulation of behavior of health and ill human. The aim of the course is to lead the students to apply the knowledge of psychology in healthcare practice.	
Course contents: 1. The subject of psychology, main directions and methods. Psyche as a function of brain and its two levels. The characteristics of the field, historical development, interdisciplinary position. 2. Cognitive processes - perception, consciousness. Memory and learning. Thinking and speech. Activation-motivational processes. Emotions. The will and attention. 3. Psychology of personality - the basic factors of personality development, psychological properties and abilities, theories of personality, character, personality of ill human. 4. The subject and content of development psychology - psychological development and its determinants, the characteristics of the development periods, prenatal, perinatal, postnatal period of development, neonatal period, breastfed period, toddler period, preschool period, younger school age, older school age, adolescence, adult age, old age. 5. Psychohygiene - prevention of burnout syndrome, anti-stress programmes, Johari window.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1014W/22	Course title: Pharmacology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: 100% active participation in lectures. The student takes control tests during the semester. The test will focus on the issues that were covered in the previous lectures. To successfully pass the control test, it is necessary for the student to achieve a minimum of 6 points from a maximum of 10 points. The result of the control test will be announced to the student one day before the of next lecture at latest. If the student gets less than 6 points, they are evaluated Fx. Each student, who failed in control test, has to retake the test from the same topic in the term given by teacher. If a student obtains two times Fx from control tests during the semester, they will not be admitted to the final exam due to the theoretical failure of the subject. The results of control tests will make 20% of the final overall evaluation of the student. At the end of the semester and the fulfillment of all conditions given by the teacher, each student passes a final written examination, which is aimed to verify the theoretical knowledge acquired during the semester. To successfully complete the final written examination, the student must obtain at least 75% of points. The results of final written examination will make 60% of overall points. The overall evaluation of the student will consist of the evaluation of control tests (40%), and the evaluation of the final written examination (60%). The student has the right to correction term in accordance with the study regulations of Faculty of Health, CU Ružomberok. Subject evaluation: A – 100 % - 93% B – 92 % - 85% C – 84 % - 77% D – 76 % - 69% E – 68 % - 60% FX – 59 % - 0%	
Learning outcomes of the course: To gain knowledge of the history of the field, definitions, characteristics and tasks of pharmacology, mechanism of action of drugs, pharmacokinetics and pharmacodynamics of drugs, their resorption, transport, biotransformations, excretion, their interrelationships and interactions, side effects, types of treatment, placebo therapy, research of new drugs, drug forms. The student will gain knowledge of basic terminology in pharmacology, routes and methods of drug administration, drug dosing, principles of drug handling and administration, and mathematics in pharmacology. The student will acquire knowledge of general and special pharmacology. The student acquire the specifics of contrast media application, the ways of their preparation, application, risks, potential allergic reactions and the possible solution from the radiological technician point of view. Theoretical knowledge: The student gains knowledge of main effects of drugs, side effects of drugs, storage, ordering, distribution and marking of drugs. To know the particular pharmacotherapeutic groups	

and their profile. Practical skills: Based on gained knowledge, the student has to know to apply particular drugs without any harm on patient.

Course contents:

1. History, definition and tasks of pharmacology, mechanism of drug effects, drug interrelationships, pharmacokinetics, pharmacodynamics, agonism, antagonism, 2. Side effect of the drug, types of treatment, placebo therapy, new drugs, drug forms, resorption, transport, biotransformation, excretion 3. Basic terminology in pharmacology, routes of drug application, drug dosing, principles and methods of drug administration, mathematics in pharmacology 4. Pharmacology of the nervous system 5. Pharmacology of the circulatory system 6. Pharmacology of the respiratory system 7. Pharmacology of the digestive system 8. Pharmacology of endocrine system 9. Pharmacology of blood and hematopoietic organs 10. Pharmacology of enzymes and vitamins 11. Pharmacology of antibiotics and chemotherapeutics, antihistamines, antiseptics and disinfectants 12. Pharmacology of chemotherapy, principles of administration

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1005W/22	Course title: Physiology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the course: During the semester: Attendance at lectures. The final evaluation: Written test before the oral exam, obtaining 60% of points from the test is a condition of the oral exam. Subject evaluation: A – 100% - 91% B – 92% - 85% C – 84% - 77% D – 76% - 69% E – 68% - 60% Fx – 59% - 0%	
Learning outcomes of the course: Learning outcomes: Objective of the course: Getting acquainted with the functions of organ systems of the human body. Understanding the organism as a dynamic whole. Changes in the body during movement and physical exercise. Theoretical knowledge: The student masters professional terminology, defines the basic physiological principles of homeostasis of the internal environment of the organism. It describes the physiological activity of organ systems, illustrates the essence of individual physiological processes. It defines the basic differences between non-specific and specific immunity, between enzyme and hormone, between autonomic and somatic nervous system and the like. Can interpret physiological changes at work and exercise. Practical skills: The student demonstrates the application of theoretical knowledge to clinical practice. He orients himself in organizing his theoretical knowledge into individual clinical disciplines, such as examination of blood elements, blood transfusion, active and passive immunization, measurement of blood pressure, evaluation of heart activity according to heart sounds and ECG curves, functional	

examination of lungs using spirometry examination. enzymes, hormones, examination of urine and kidney function, principles of proper nutrition, the effect of stress on the body, etc.

Course contents:

Course contents:

1. Characteristics of the subject, cell physiology, internal environment.
2. Physiology of blood.
3. Physiology of the cardiovascular and lymphatic system.
4. Physiology of respiration.
5. Physiology of the digestive system and nutrition.
6. Physiology of the excretory system.
7. Physiology of the endocrine system.
8. Physiology of the autonomic and somatic nervous system.
9. Physiology of thermoregulation, muscles and skin.
10. Physiology of the immune system and reproduction.
11. Physiology of nutrition and sensory organs.
12. Physiology of work and physical exercises.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1030W/22	Course title: Preventive Medicine and Hygiene
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 3 hours per semester: 36 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During semester: There will be at least one written test during semester where students can get a maximum of 20 points. At the final exam (written/oral) student can get a maximum of 80 points. Students can obtain together 100 points. During the lectures student will analyse assigned topics. Final evaluation: Final marking will be on the basis of the points obtained from the tests during semester and in exam period. Course evaluation: A – 100 %-93 % B – 92 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %- 0 %	
Learning outcomes of the course: The aim of the course: Through the acquired knowledge and skills to create a comprehensive and conceptual view of prevention, preventive medicine and hygiene in the public health complex, individual sections of public health - their characteristics, content and methods of work, be able to act conceptually and preventively and think about preventive medicine, hygiene and public health in terms of preventive health care and the overall goal. Theoretical knowledge: To know the general and specific principles of health prevention, the scope and objectives of hygiene and public health, be able to act preventively and think about the management of the health team, department and the whole facility in terms of health care, prevention and hygiene, providing education and training of health care workers, use of prevention in individual areas of health care. Practical knowledge: To be able to use knowledge from individual areas of preventive medicine and hygiene departments, to be able to ensure the quality of preventive health services in the field of environment, nutrition,	

hygiene of children and adolescents and preventive occupational medicine, their evaluation, including the importance of health for individuals and society.

Course contents:

The structure of the course:

1. Preventive medicine, hygiene - public health, characteristics, position, development
2. Characteristics of individual branches of public health - hygiene
3. Determinants of health and factors influencing health
4. General epidemiology and prevention of communicable diseases
5. Epidemiology of non-infectious diseases of civilization
6. Environmental hygiene - air, soil, water, noise, housing and settlements
7. Hygiene of medical facilities
8. Preventive occupational medicine man and work environment
9. Nutritional hygiene - rational nutrition, food evaluation, eating together, food production.
10. Hygiene of children and youth
11. Protection against ionizing radiation
12. National health promotion program, the state of public health in Slovakia

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1041W/22	Course title: Research in Health Care
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: <p>Active participation in exercises. The student takes control tests during the semester. The test will focus on the issues that were covered in the last exercises. To successfully pass the control test, it is necessary for the student to achieve a minimum of 6 points from a maximum of 10 points. The result of the control test will be announced to the student after the end of the exercises or one day before the start of next exercises. If the student gets less than 6 points, he/she is evaluated Fx. If a student obtains two times Fx from control tests during the semester, he/she will not be admitted to the final exam due to the theoretical failure of the subject. The results of control tests will be part of the final overall evaluation of the student.</p> <p>During the semester, each student prepares a semester work on a predetermined topic, which he is obliged to submit according to the instructions of the teacher.</p> <p>After the end of the semester and the fulfillment of all conditions given by the teacher, each student passes a final written examination, which is aimed to verify the theoretical knowledge acquired during the semester. To successfully complete the final written examination, the student must obtain at least 80% of points.</p> <p>The overall evaluation of the student will consist of the evaluation of control tests, evaluation of the semester work, evaluation of the final written examination and evaluation of the activity in the exercises. The teacher has the right to change the written examination to oral, which he must inform in advance. The student has the right to correction term in accordance with the study regulations of Faculty of Health, CU Ružomberok.</p>	
Learning outcomes of the course: <p>Objective of the course - aims of the course unit: to acquire basic knowledge about research, research methods - quantitative and qualitative. Master the stages of research and be able to publish research results.</p> <p>Theoretical knowledge: to master the theory of research in emergency health care, basic terminology in research, ethics in research, basics of qualitative and quantitative research, stages and phases of research, research methodology, principles of presentation of research results.</p> <p>Practical skills: to master the application of ethical and legal aspects in research, prepare the final thesis, compile a research on the topic of semester and final work, critically assess their own and acquired documents, be able to present the methodology of their own work, be able to compile individual research methods of data collection (questionnaire, survey, interview, case study,</p>	

observation, document analysis), prepare the obtained data for statistical evaluation, process the results of the final work, prepare a presentation and present the final work, research results.

Course contents:

1. Research theory, research process and its stages - conceptual phase of research - definition of research problem
2. Research process and its stages - conceptual phase of research - overview of sources, theoretical framework, hypotheses
3. Work with literature, research sources and databases
4. Research process and its stages - design and planning phase - empirical phase
5. Research process and its stages - analytical phase - dissemination phase
6. Methods of empirical data collection - questionnaire, observation, experiment, Case Study / case study
7. Measurement and measuring tools
8. Statistical methods - deductive statistics
9. Statistical research methods - inductive statistics
10. Qualitative research
11. Publication of results and their presentation
12. Final thesis - Rector's directive of KU no. č. VP-KU-35

Learning outcomes of the course: Objective of the course - aims of the course unit: to learn the principles of writing a final thesis and work with literature in accordance with the Rector's Directive KU No. 2/2017 on the requirements of final, rigorous and habilitation theses, their bibliographic registration, control of originality, storage and access. Master the standards, ethical principles and techniques of citation and work with bibliographic references. To master the principles of formal arrangement of the final work, the way of its presentation and publication. Theoretical knowledge: to master the basic theory of writing the final thesis, masters the basic differences between different types of works, rules of work with literature, rules and ethics of citation, paraphrasing, basic principles of formal and content of the final thesis.	

Practical skills: write the final thesis in accordance with the directive of the Rector of KU no. 2/2017, prepare a presentation of the final work, present their work and publish the results of their work in professional periodicals

Course contents:

1. Final thesis, definition, types of final theses, final thesis assignment, thesis annotation.
2. Structure and requisites of the final thesis - (cover, title page, assignment of the final thesis, statement on the number of characters).
3. Structure and requisites of the final work - (thanks, abstract in the state language, abstract in a foreign language, content).
4. Structure and requisites of the final work - (list of illustrations and list of tables, list of abbreviations and symbols, dictionary).
5. Main text part of the work - (introduction, core, conclusion, list of used literature).
6. The main text part of the work - (current state of the problem at home and abroad).
7. The main text part of the work - (goal of the work, methodology of research and methods of research, results of work, discussion).
8. Work with literature, citations and bibliographic references.
9. Formal arrangement of the final work.
10. Attachments and list of attachments.
11. Submission of the final work, control of originality.
12. Presentation of the final work and publication of the obtained results.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KLVM/54L1053W/22	Course title: Toxicology and Examination Methods
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the course: During the semester: As part of the self- controlled study, elaboration of a semestrial written work, its evaluation makes up 10% of the final evaluation Záverečné hodnotenie: test and oral examination Course evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%- 0%	
Learning outcomes of the course: Learning outcomes: Objective of the course - aims of the course unit: To acquaint students with toxicology and with the effects of chemical substances, mixtures, toxins on the human body. Theoretical knowledge: The student will gain basic theoretical knowledge about toxicology, toxic substances, toxins, pathways and mechanisms of entry into the body, the absorption of toxins and their metabolism, distribution in the body, clinical manifestations of intoxication by individual toxic factors. Knows the symptoms of intoxication with narcotic and psychotropic substances, organic and inorganic substances, the possibility of elimination in prehospital emergency care and hospital care and the possibility of protecting health from intoxication Practical skills: The graduate is able to recognize intoxications according to the clinical manifestations of intoxication. Can take measures to protect health from the risk of exposure to toxic factors and to use elimination options correctly in case of intoxication.	
Course contents: Course contents: 1. Basic concepts in toxicology, Toxicological disciplines and their connection with medical disciplines	

2. The concept of toxic substance. Latent dose. Exposure.
3. General toxicology. Ways and mechanisms of entry of poisons into the organism, gates of entry.
4. Absorption of poisons and their metabolism. Distribution and kinetics of toxic substances in the body and the possibility of elimination of toxic substances from the body.
5. Acute, chronic toxicity and late effects of chemicals and mixtures.
6. Toxic properties of selected inorganic substances and organic substances.
7. Toxicology of pesticides, warfare agents. Radioactive substances. Vitamins.
8. Toxicology of narcotics and psychotropic substances, the most commonly used drugs.
9. Toxicology of animal toxins.
10. Toxicology of plant toxins.
11. Toxicology and drug addiction
12. Regulatory toxicology. Classification of chemical substances and mixtures according to toxicity.
