COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1001W/22	Course title: Anatomy
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: Active participation in lectures. Final evaluation: written exam (0-100). The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who obtained at least 60 out of 100% from the subject for fulfilling the specified conditions. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Course objective: <ul style="list-style-type: none"> • Knowledge: Acquisition of anatomical nomenclature and basic anatomical concepts, anatomical planes and directions. Acquiring detailed knowledge about the anatomical structure of individual organs and organ systems. Be able to describe in Latin a macroscopic view of individual organs and also their anatomical structure and the anatomical structure of the walls of individual organs. • Skills: Based on the anatomical description, be able to identify and characterize individual organs and individual systems of the human body. • Competences: By understanding the anatomical structure and structure, also understand the physiological functions of individual systems. 	
Course contents: Anatomy of the axial skeleton, skeleton of the limbs. Myology, muscles of the head, torso and limbs. Anatomy and structure of the digestive system. Anatomy and structure of the respiratory system. Structure of the heart, anatomy and branching of blood vessels. Lymphatic system. Anatomy and structure of the urinary system. Anatomy of male and female genitals. Blood. Endocrine system. Nervous system. Sensory organs.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V24S/22	Course title: Bachelor Thesis Defense
Type and range of planned learning activities and teaching methods: Form of instruction: Recommended study range: hours weekly: hours per semester: Teaching method: on-site	
Credits: 6	Working load: 150 hours
Recommended semester/trimester: 5., 6..	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the course: the student has successfully completed all prescribed study obligations of the bachelor's study program. The student's knowledge and skills in the defense of the bachelor's thesis will be checked and evaluated according to standard criteria by the commission for state examinations. Credits will be awarded to a student who has obtained at least 60 out of 100%. Rating: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%- 0%.	
Learning outcomes of the course: Learning outcomes: <ul style="list-style-type: none"> • Knowledge: the student has the knowledge necessary to write a bachelor's thesis in the areas of public health listed in the brief outline. Has knowledge about the topic and objectives of the final bachelor's thesis. • Skills: The student can defend the final bachelor's thesis and can prepare its presentation in PPT. • Competences: passing the state exam is a confirmation that the student has mastered the requirements of the study program and can solve tasks in the performance of the profession. 	
Course contents: Passing the state exam is confirmation that the student has mastered the requirements of the study program in both the theoretical and practical parts and has acquired knowledge and practical skills as well as competence in the following areas: Preventive occupational medicine. Health advisors. Environmental hygiene. Hygiene of children and youth. Food hygiene. Epidemiology of non-infectious diseases. Epidemiology of infectious diseases. To protect and promote health.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1003W/22	Course title: Biochemistry
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: participation in lectures in which students analyze assigned topics. Final assessment: written exam (0-50 points) The number of points obtained for the final evaluation is 50. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who obtained at least 60 out of 100% from the subject for fulfilling the specified conditions. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Learning outcomes: <ul style="list-style-type: none"> • Knowledge: The student acquires basic knowledge about biochemistry and the biochemical nature of the disease. The student will acquire complex knowledge and skills about biochemical processes in the human organism. The student will become familiar with the structure of the cell, especially its organic composition such as carbohydrates, lipids, proteins, nucleic acids. At the same time, he will gain knowledge about the metabolism of carbohydrates, lipids, energy production and localization of these processes in cells. He will also become familiar with enzymes as catalysts of biochemical reactions, with vitamins and hormones. He will understand the individual phases of the clinical-biochemical examination. • Skills: can apply acquired knowledge in nursing practice. • Competences: the student will be able to dispose of the acquired knowledge and skills mentioned above and actively use them in nursing practice. 	
Course contents: Brief subject scheme: Characteristics of biochemistry. Cell structure and its relation to metabolism. Chemical composition of the cell. Structure and functions of biological membranes, transport of substances. Characteristics and metabolism of carbohydrates (glycolysis, gluconeogenesis, energy balance of glycolysis, pentose cycle). Glycogen metabolism, Citrate cycle, formation of Acetyl-CoA, glycemia and its regulation. Characterization and metabolism of lipids. The position of cholesterol in human metabolism. Biological oxidations, energy production, electron transport and oxidative phosphorylation, respiratory chain complexes. Structure and function of proteins. Meaning and	

functions of nucleic acids. Biochemistry of the endocrine system, distribution and functions of hormones. Structure and functions of hemoglobin, breakdown of heme and formation of bile pigments, formation and transport of bilirubin. Distribution and functions of vitamins. Enzymology - enzymes and coenzymes, mechanism of enzyme action, speed of enzyme reaction, activation and inhibition of enzymes. Individual phases of clinical-biochemical examination. Pre-analytical phase, biological material and its collection. Analytical phase - possible sources of errors during laboratory examination, Post-analytical phase - interpretation of results.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1002W/22	Course title: Biophysics and Radiology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Final assessment: written exam (0-20 points) The number of points obtained for the final evaluation is 20. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who obtained at least 60 out of 100% from the subject for fulfilling the specified conditions. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: The objective of the course: <ul style="list-style-type: none"> • Knowledge: know the basic physical processes in the human organism. Understand the physical nature of the transformation and transfer of energy in the organism, events in the cell, sight, hearing, and other senses, breathing and blood circulation, locomotor system. • Skills: acquisition of the above knowledge, as well as the importance of ecological biophysics and the connection of the external environment with the functioning of the organism. He knows the properties of ionizing radiation and its effects on humans. He knows the methods of health protection against radiation and the basics of dosimetry. • Competences: The student controls the relevant parts of biophysics to the extent necessary for understanding the functioning of the organism and its parts: thermodynamics, cell biophysics, diffusion and osmosis, properties of gases and liquids, basics of acoustics and optics, electrical and magnetic phenomena, ecological biophysics, radioactivity, effects of radiation on humans and radiation protection. 	
Course contents: Basics of thermodynamics. Basic physical processes in the organism, cell biophysics, action potential. Biophysics of respiration, blood circulation, heart. Human senses, taste, hearing, vocal system. Sight, optics, eye. Ecological biophysics. The influence of external factors on a person. Biophysics of ionizing radiation. Radioactivity. Dosimetry. Biological effects and health protection from radiation. Basic principles of radiation protection, operation of workplaces with radiation emitters, definition of protective zones. 9. Conditions for carrying out activities leading to irradiation, monitoring, recording of personal doses, monitoring of radioactive substances, provision of radiation protection. Event, significant event, emergency and radiation emergency,	

protection of residents and the environment, including emergency situations. Activity of the Public Health authorities in the event of a radiation event, accident and accident.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1049W/22	Course title: Clinical Practice - Training 4
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: hours per semester: 192s Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites: KVEZ/44V1039W/22	
Requirements for passing the course: a) active participation in exercises b) Final evaluation: performance evaluation Subject evaluation: A – 100%-93%; B – 92%-85%; C – 84%-77%; D – 76%-69%; E – 68%-60%; FX – 59%- 0%. Credits will be awarded to a student who obtained at least 60 out of 100% from the subject for fulfilling the specified conditions.	
Learning outcomes of the course: Learning outcomes: <ul style="list-style-type: none"> • Knowledge: The student will deepen the theoretical knowledge acquired in lectures and exercises on the support and protection of the health of children and youth, especially with a focus on the development and improvement of the health of the young generation, and will become familiar with systemic measures aimed at the exclusion or reduction of the risk of diseases and other disorders health. As well as theoretical knowledge of nutrition hygiene. • Skills: The student will acquire practical skills, habits and work skills in the sections of hygiene of children and youth in the facilities of the Regional Offices of Public Health (RÚVZ) and in the section of Hygiene and Epidemiology of the ÚVN SNP FN on nutrition hygiene. He will become familiar with practical activities and actively participate in solutions to both model and real situations. • Competences: Acquires competencies for work in the area for work at the public health office in the section of child and youth hygiene and nutrition hygiene and applies the results in state health supervision. 	
Course contents: HYGIENE OF NUTRITION: Assessment of nutrition and the nutritional status of a person. Food hygiene - HACCP (Hazard Analysis and Critical Points). Food hygiene professional competence and training of employees. Sanitary measures against unwanted microorganisms and pests in food establishments. Hygienic requirements for the construction and operation of food facilities 6. HYGIENE OF CHILDREN AND YOUTH: Assessment of growth and development of children and youth. Determining physical fitness and performance. Assessment of movement development. Assessment of psychological development. Hygienic requirements for collective facilities for	

children and youth. Hygienic requirements for the educational process. Protection of the health of children and youth in preschool and school age.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1016W/22	Course title: Clinical Practice -Training 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: hours per semester: 96s Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the subject: a) During the semester: active participation in exercises b) Final evaluation: evaluation of practical performances Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Learning outcomes: <ul style="list-style-type: none"> • Knowledge: The student acquires knowledge about the operation of individual outpatient and hospital departments, their organization and epidemiological regime. Acquires knowledge about the diagnosis of nosocomial infections and basic knowledge about preventive and repressive measures. • Skills: The student applies his theoretical knowledge and acquired basic knowledge about the impact and risks of the environment and the operation of medical facilities on health in the provision of curative and preventive care. He acquired the skills to perform professional activities in the field of hospital hygiene and prevention of nosocomial infections. • Competencies: Acquires competencies for work in the field of hospital hygiene. Knows and analyzes the basic principles of the operation of microbiological laboratories and applies the results in state health supervision. 	
Course contents: Course contents: Hygienic-epidemiological regime of the workplace; Use of personal protective work equipment and clothing; Hand hygiene; Handling of linen; Food manipulation; Waste management; Disinfection, sterilization of tools, aids, environment; Barrier treatment; Hygienic principles of biological material collection; Reporting, diagnosis and documentation of nosocomial infections; Preventive and punitive measures aimed at nosocomial infections; Asepsis, antisepsis.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1005W/22	Course title: Environmental Health and Human Ecology 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) during the semester: active participation in exercises and presentation of assigned work b) final assessment: oral exam. Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Objective: <ul style="list-style-type: none"> • Knowledge: The student will gain knowledge about environmental health and human ecology. It has knowledge of the growth, distribution and organization of the interrelationships between human communities, other species and their (natural or artificial) environment. Acquire knowledge about regional as well as global environmental problems in relation to human health. • Skills: the student can define and evaluate environmental risks threatening the ecosystem, with an orientation to the connection with health risks in the Slovak Republic, in the European Union as well as on a global scale. • Competences: the student can use the acquired knowledge and skills about environmental health and human ecology in order to contribute to the reduction of the environmental burden and to the increase of health protection in specific areas. 	
Course contents: Introduction to environmental health and human ecology - history, definitions, goals of the field. Basic concepts and definitions Historical development of man Paths from natural to human ecosystem. Global problems of the current world, global warming, weakening of the ozone layer, acid atmospheric deposition, threats to biological diversity. Biodiversity and world food production, genetically modified foods, organic foods. Urbanization and health risks. Ecology of the building environment, sick buildings syndrome, interior pollutants. Environmental Action Plan of the European Union. European Environment Agency. Europe's environment, status and perspective. Summary assessment of the environmental situation in Slovakia. Green infrastructure. Ecology of the family. Ecological disasters. Ecotoxicology and biomonitoring, environmental toxicology, monitoring. Ecological disasters. Ecoterrorism, chemical terrorism, bioterrorism.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1029W/22	Course title: Epidemiology 3
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites: KVEZ/44V1015W/22	
Requirements for passing the course: a) During the semester, participation in lectures and exercises in which students analyze assigned topics. Test. b) Final assessment: exam Credits are allocated to the student who received them from the subject for fulfilling the specified conditions. Rating scale: 100-93% - A (excellent); 92-85%- B (very good); 84-77%- C (good); 76-69%- D (satisfactory); 68-60%- E (sufficient); 59-0% -Fx (not enough)	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: To acquire basic knowledge about the process of spread of infectious diseases, mechanisms of transmission, degrees of intensity, social and natural factors affecting the process of spread of disease. To acquire basic knowledge of epidemiological laws and theoretical and practical skills in the implementation of preventive and repressive measures. • Skills: can apply knowledge and take a basic attitude and solve anti-epidemic measures in outbreaks of communicable diseases. Use knowledge in ensuring intervention strategies, protection and promotion of health from the point of view of prevention of infectious diseases. • Competences: the student will be able to dispose of the acquired knowledge and skills mentioned above and actively use them in practice. 	
Course contents: Epidemiology of infectious diseases, infection and its forms. The process of spreading the infection and the degree of intensity. Distribution of infectious diseases from an epidemiological point of view. Intestinal infections. Respiratory infections. Blood infections. Skin and mucous membrane infections. Zoonoses and infections with natural outbreaks. Sexually transmitted infections, slow viral infections of the CNS. Epidemiological surveillance of infectious diseases. Principles of combating infectious diseases, quarantine measures. Immunization, principles of active and passive immunization.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1020W/22	Course title: First Aid
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) during the semester: there will be a written examination at the exercises, where a maximum of 40 points can be obtained. To participate in the exam, it is necessary to obtain at least 20 points from the background check. b) final assessment: written exam. Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Objective of the course <ul style="list-style-type: none"> • Knowledge: To analyze the system, organization, legal aspects of first aid, to know the general principles of first aid and to develop professional knowledge, skills of students of the field of study and the use of modern methods of work in this field. • Skills: to master the procedures, first aid algorithm for emergencies and exceptional situations. Know how to apply legal aspects, system and organization of first aid. • Competences: the student knows how to use the acquired knowledge and skills from first aid while being able to provide first aid. 	
Course contents: Introduction to the subject, general principles of first aid. System, organization, legal aspects and general principles of first aid. Assessment of a person's health. Disorders of consciousness. Emergency cardiopulmonary resuscitation (CPR). Obstruction of airways by a foreign body. Selected emergencies. Bleeding. Shock. Fractures. Acute conditions caused by physical and chemical influences. Electric shock. First aid in emergency situations. Poisoning (intoxication). Antidote and aids.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1023W/22	Course title: Fundamentals of Medical Fields
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites: KVEZ/44V1001W/22	
Requirements for passing the course: a) during the semester: active participation in lectures b) final assessment: written exam. Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: the student acquires theoretical knowledge about the method of obtaining an anamnesis, how to perform a basic physical examination (inspection, percussion, palpation, auscultation), evaluates vital functions. He has the knowledge to analyze the results obtained on the basis of anamnestic data and physical examination, resulting in a correctly determined preliminary diagnosis. He has knowledge of the clinical picture of some of the most common diseases of individual organ systems (from the field of internal medicine, from pediatrics, from surgery, from oncology, from geriatrics, from gynecology). • Skills: able to obtain an anamnesis, when performing a physical examination. Based on the knowledge of the clinical picture of some diseases, he orients himself about the severity of the disease, or solves and manages the next procedure • Competences: the student can assess the patient's health status based on examination procedures in clinical practice (obtain anamnesis, perform a basic physical examination). He can evaluate information about the etiology, pathogenesis and clinical picture of the most common diseases of individual organ systems, based on which he can assess the occurrence and risks of nosocomial infections, as well as order preventive or punitive measures. 	
Course contents: Basics of clinical propaedeutics. Basic clinical knowledge from internal medicine. Basic clinical knowledge of pediatrics. Basic clinical knowledge of pediatrics. Basic clinical knowledge of surgery. Basic clinical knowledge of surgery. Basic clinical knowledge of oncology. Basic clinical knowledge of oncology. Basic clinical knowledge of geriatrics. Basic clinical knowledge of geriatrics. Basic clinical knowledge of gynecology. Basic clinical knowledge of gynecology.

Course code: KVEZ/44V1062W/22	Course title: Medical Techniques
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 3 hours per semester: 12 / 36 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) during the semester: active participation in exercises b) final assessment: oral exam. Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: The student will gain knowledge about the general principles, procedures and techniques of providing health care from the point of view of public health. • Skills: The student can apply individual principles, procedures and techniques in the provision of health care. • Competences: the student has the ability and competence to use the acquired knowledge and skills in the performance of state health supervision in medical facilities. 	
Course contents: Patient admission, patient triage. Barrier treatment technique. Hygienic patient care. Measurement and recording of physiological functions. Serving food to patients. Administration of medicines and injections. Blood sampling. Urine collection. Stool collection and rectal swab. Swab from the nose, nasopharynx, tonsils, sputum collection. Swab from the wound. Wound care. Prevention of pressure ulcers and steaming. Peripheral vascular catheter care, central venous catheter. Care of an indwelling urinary catheter. Airway care during artificial lung ventilation. Decolonization of the patient. Care of the patient with multiresistant microorganisms. Use of personal protective work equipment and clothing. Hand hygiene. Waste management. Housekeeping. Disinfection of tools, aids and work surfaces.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1050W/22	Course title: Objectivization of Factors of the Living and Working Environment
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) during the semester: active participation in exercises b) final assessment: oral exam. Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: the student will acquire the latest knowledge from the scientific fields of chemical analysis, environmental biology, environmental microbiology, and physical factors. Become familiar with the roles of public health and the roles of the state and health protection authorities in caring for healthy living and working conditions. • Skills: the student will acquire practical skills in assessing environmental risks to the health of the population as well as risks and threats in the work environment - health risks. • Competences: the student knows how to use the acquired knowledge and skills in assessing the impact of factors from the living and working environment on people's health. He is able to objectify life and work factors in the implementation of state health supervision, as well as in other activities arising from the tasks of public health. 	
Course contents: Biological methods of water testing. Ecotoxicological tests of waters and leachates. Microbiological tests of drinking water. Microbiological tests of cosmetics. Microbiological tests of air. Chemical and physical-chemical testing of water, food, air. Biological exposure tests and genetic toxicology. Noise and vibrations in the living and working environment. Measurement of thermal-humidity microclimate and optical radiation. Electromagnetic field in the living and working environment. Accreditation and good laboratory practice. Validation of methods, uncertainty of measurement.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1018W/22	Course title: Pathology and Pathological Physiology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: Participation in lectures. Final evaluation: Oral exam (0-100 points). Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Objective of the course <ul style="list-style-type: none"> • Knowledge: Pathology is a branch of science dealing with changes in the human organism during illness. It explains the origin and manifestations of individual diseases. Know the basic terminology in the field. Gain knowledge from general pathology about the pathomechanism of fever, inflammation, hypoxia, shock, stress, etc. About the change in the structure and function of individual organs during the disease. . • Skills: The student defines the essence of disease and health, has knowledge about the etiology, pathogenesis and prevention of diseases, the differences between hereditary, congenital and acquired disease, has knowledge about the pathology of inflammation, cell pathology, malignant transformation of cells, disorders of thermoregulation, water and electrolyte management , about shock, collapse states, stress, etc. He has knowledge about the pathogenesis of diseases of individual organ systems. • Competences: In practice, he can apply theoretical knowledge about the basic pathomorphological and functional changes of individual organs during disease processes to clinical practice and use it in the assessment of the patient's condition. 	
Course contents: Characteristics of the field, definition of illness, health. Etiology, pathogenesis and prevention of diseases. The importance of heredity in the pathogenesis of diseases, stress. Inflammation (types and forms, inflammatory mediators), malignant transformation of cells, pain. Fever, disorders of water and electrolyte metabolism and internal environment. Pathophysiology of shock, collapse states, syncope. Pathogenesis of atherosclerosis and heart disease. Pathophysiology of the vascular system, pathogenesis of hypertension. Pathophysiology of the respiratory system diseases of the respiratory system. Pathogenesis and diseases of the uropoietic system. Pathogenesis, pathophysiology of	

diseases of the endocrine system and diabetes mellitus. Pathogenesis of GIT diseases and GIT diseases. Pathogenesis of blood and hematopoietic system. Pathogenesis of the movement system.

Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 0 hours per semester: 24 / 0 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the course: a) During the semester: participation in lectures b) Final assessment: Exam. Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Learning outcomes: <ul style="list-style-type: none"> • Knowledge: Familiarity with the basic physiological functions of individual organ systems of the human body. Understanding the organism as a dynamic whole, the importance of homeostasis of the internal environment for the functioning of organs and its stability. Changes in the organism during movement and physical exercises. • Skills: The student controls professional terminology, defines the basic physiological principles of homeostasis of the internal environment of the organism. It describes the physiological activity of organ systems, illustrates the essence of individual physiological processes. It defines the basic differences between non-specific and specific immunity, between an enzyme and a hormone, between the autonomic and somatic nervous system, etc. Can interpret physiological changes during work and physical exercises. • Competences: The student demonstrates the application of theoretical knowledge to clinical practice. He orients himself in the integration of his theoretical knowledge into individual clinical fields, such as blood pressure measurement, evaluation of cardiac activity according to heart echoes, knowledge of the basic parts of the EKG curve and functional examination of respiratory volumes. Knows the basic principles of examination of urine and kidney function, examination of blood elements, when administering a blood transfusion, the importance of examination of enzymes, hormones, differences 	
Course contents: Course contents: Characteristics of the subject, cell physiology, internal environment. Blood physiology. Physiology of the cardiovascular and lymphatic system. Physiology of respiration. Physiology of the digestive system and nutrition. Physiology of the excretory system. Physiology of the endocrine system.	

Physiology of the autonomic and somatic nervous system. Physiology of thermoregulation, muscles and skin. Physiology of the immune system and reproduction. Physiology of nutrition and sensory organs. Physiology of work and physical exercises.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1053W/19	Course title: Profesional Ethics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) During the semester: active participation in exercises b) Final evaluation: performance evaluation Subject evaluation: A – 100%-93%; B – 92%-85%; C – 84%-77%; D – 76%-69%; E – 68%-60%; FX – 59%- 0%. Credits will be awarded to a student who obtained at least 60 out of 100% from the subject for fulfilling the specified conditions.76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: The student deepens theoretical knowledge in the field of professional communication and the specifics of communication. The student will gain knowledge about the latest approaches in the field of ethics and decision-making in the field of public health. • Skills: The student will be able to demonstrate the basics of professional behavior in health care. Master the model of effective communication based on the situation, environment and self-evaluation. He will acquire practical skills that will help him analyze current ethical problems affecting the field of public health, on the basis of which he will be able to make decisions in specific situations. • Competences: Acquires competencies within professional behavior in health care. 	
Course contents: Codes of ethics and requirements for health workers. Moral and ethical dilemmas in healthcare at the beginning of life - artificial reproduction, viability, artificial termination of pregnancy, contraception. Moral-ethical evaluation of problems in the care of sexual and reproductive health: the problem of sterilization, castration, prenatal diagnostics, programmed birth, transplantation of human fetal tissues. selective reproduction, eugenics and public health. Ethics and ethics commissions. The process of obtaining informed consent. Ethics, screening, control of infectious diseases and coercive means in healthcare. Ethics of transplantation. Ethics, smoking and environmental health. Ethics at the end of life - euthanasia, futile treatment, failure to provide treatment to the dying. Patients' rights and ethics. Ethics and screening programs, immunization, development of new drugs. Ethics and preventive programs

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V21S/22	Course title: Public Health - Epidemiology
Type and range of planned learning activities and teaching methods: Form of instruction: Recommended study range: hours weekly: hours per semester: Teaching method: on-site	
Credits: 6	Working load: 150 hours
Recommended semester/trimester: 5., 6..	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the course: the student has successfully completed all prescribed study obligations of the bachelor's study program. The student's knowledge will be checked and evaluated according to standard criteria by the commission for state examinations. Credits will be awarded to a student who has obtained at least 60 out of 100%. Rating: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%- 0%.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: the student has knowledge of the core subject Public health – epidemiology, which he acquired during his three-year study. • Skills: the student can independently fulfill all the requirements placed on a public health worker in all areas of epidemiology. • Competences: passing the state exam is a confirmation that the student has mastered the requirements of the study program in the theoretical area of the subject Public Health – Epidemiology and can apply them in the performance of the profession. 	
Course contents: Measurement of the health status of the population (mortality, morbidity, incidence, prevalence, disability...). Variability, validity, random and systematic errors, distortions. Risk, screening, questionnaire. Observational epidemiological studies. Interventional epidemiological studies. Monitoring the health status of the population. Prevention. Epidemiology of cardiovascular diseases (CVD), preventive programs of CVD. Epidemiology of oncological diseases (OO), preventive programs of OO. Epidemiology of non-infectious diseases of the gastrointestinal tract and nutrition programs. Epidemiology of non-infectious diseases of the respiratory system, civilized diseases of the respiratory system. Epidemic process (the process of spreading the disease). Mechanism of transmission of disease-causing germs. Measures against the emergence and spread of infectious diseases. Degrees of intensity of the process of spreading the disease. Epidemiological distribution of inf. Disease. Intestinal infections (characteristics, transmission, epidemiological characteristics, principles of prevention). Respiratory tract infections (characteristics, transmission, epidemiological characteristics, principles of prevention). Bloodborne diseases (characteristics, transmission, epidemiological characteristics, vectors and their importance, principles of prevention). Diseases of the skin and superficial mucous membranes	

(characteristics, transmission, epidemiological characteristics, principles of prevention). Hospital infections. Programs of eradication and elimination of infectious diseases. Immunization program. Analytical epidemiological studies. Health and disease, indicators of disease - determinants of health.

Course contents: Course contents: Public health - definition, its scientific fields and their brief characteristics. What is hygiene? What is the field, what is it focused on, what does it deal with, what does it analyze, what does it determine, content, tasks and methods of work. Prevention – primary, secondary, tertiary. Definitions, characteristics, means of prevention, meaning. Determinants of health and their importance for individual and population health according to WHO - factors that affect health. Characterize the concept of environmental hygiene. Characterize the concept of nutrition hygiene. Characterize the concept of preventive occupational medicine. Characterize the concept of hygiene for children and youth. Air - characteristics, composition, physical properties of air (temperature, humidity, atmospheric pressure, air flow, radiation...) Air pollution and consequences for human health. Water - characteristics, meaning, water cycle, atmospheric - precipitation water, surface water, quality and composition of surface water, water pollution, self-purification of water, water supply, PHO). Division of water according to quality – wastewater, fresh, infectious, radioactive...). Water and health, health risks from water. Soil - characteristics, composition, properties and function of soil. Health hazard from soil, food chain. Hygienic issues of solid waste. State health supervision -	

characteristics, its components. State health supervision at the HŽP section. State health supervision in the PPL section. State health supervision in the HV section. Nutrition and its importance for human health, HCCP, energy and biological value of food; Importance of fats, carbohydrates and proteins in nutrition; Principles of proper eating; Program for improving the nutrition of the Slovak population. Nutrition of pregnant and lactating women; Nutrition of children; Nutrition of the elderly; Alternative nutrition. Microbiological risk from food and prevention (food infections, food poisoning). Foreign substances in food and contaminating substances; Ensuring the safety of food. Xenobiotics and their effects on health. Building and spatial layout of medical facilities, hygiene standards. Specific requirements for individual departments in an inpatient medical facility (water supply, waste, laundry, catering...). Specific requirements for ambulatory medical facilities, types, location, equipment, waiting rooms... Risk factors in medical facilities and health protection. Health protection and promotion of optimal development of children and youth; Development of children and youth and primary prevention (physical development of children and youth, speed of growth and development, calendar and biological age, endogenous and exogenous factors affecting growth and development), nutrition, morbidity. Hygienic requirements and standards for children's and school collective facilities (premises, general principles of care for children up to 6 years of age, pedagogical process, principles of teaching organization, pupils' work and rest regime. Hygienic aspects of practical teaching and protection of the health of adolescents at work, basic health indicators of children and youth, the role of the goals of the state health supervision. Working environment - characteristics, its impact on health, harmful factors. Categories of risky work - characteristics, definition of categories, type of risk - physical, chemical, biological. Occupational diseases - characteristics, definition of conditions of occurrence. Impact of noise and vibration on health. Physical risk factors of the work environment (except noise and vibration - microclimate, lighting, cold, heat). Ionizing radiation - characteristics, distribution, effects, acute and chronic symptoms, measurement, protection, prevention. Chemical factors of the work environment and their effect on health, basic species effect on human health, characteristics, protection, prevention. Biological exposure tests and their importance for health and work environment assessment. Biological risk factors in the work environment - characteristics, types, health damage, prevention, protection. Psychological work load (neuropsychic, psychosocial and sensory load in the work environment, burnout syndrome, excessive stress at work), prevention, protection. Assessment and evaluation of health fitness for work. Basic principles of health protection at work, technical prevention. Occupational health service - characteristics, composition of the team, job content.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1043W/22	Course title: Research in Healthcare
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) during the semester: active participation in exercises and presentation of assigned work b) final assessment: written test. Credits will be awarded to a student who scored at least 60 out of 100% on the test. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Objective of the course: <ul style="list-style-type: none"> • Knowledge: the student defines basic terminology in research. Distinguishes qualitative and quantitative research methods. He controls the stages of research, knows how to define the problems and goals of research activity. He can distinguish between different types of publishing activity in the health sector. • Skills: the student actively works with literature, analyzes, synthesizes and compares the necessary information, correctly selects and applies research methods, assembles individual components of the most frequently used research methods such as questionnaires, surveys, interviews. Interprets numerical and verbal data obtained. • Competences: the student knows how to use knowledge and skills about research while working in public health, thereby contributing to the acquisition of new scientific information or contributing to its implementation in practice. 	
Course contents: Course contents: Research, basic terminology in research, research in healthcare. Ethics and research. Qualitative and quantitative research and its use in healthcare. Stages and phases of research. Working with literature, processing literature, critical and non-critical thinking. Evidence-based practice (EBP). Problem, goal, hypotheses in research, research sample and their peculiarities in the implementation of clinical research in healthcare. Choice of method in planning and conducting research. The most common research methods - questionnaire, survey and their application. The most common research methods - interview, observation and their application. Use of experimental method, case study and document analysis. Processing of research results. Oral, written and combined presentation of research results.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KVEZ/44V1034W/22	Course title: Toxicology and Investigation Methods
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: a) during the semester: preparation of the semester work, its evaluation constitutes 10% of the final evaluation. b) final assessment: oral exam. Credits will be awarded to a student who has obtained at least 60 out of 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%-0%.	
Learning outcomes of the course: Learning outcomes: <ul style="list-style-type: none"> • Knowledge: The student will acquire basic theoretical knowledge about toxicology, about toxic substances, toxins, about the ways and mechanism of entry of substances into the body, about the absorption of poisons and their metabolism, distribution in the body, about clinical manifestations of intoxication by individual toxic factors. Knows the symptoms of intoxication with narcotic and psychotropic substances, organic and inorganic substances, the possibilities of elimination in pre-hospital emergency care and in hospital care, and the possibilities of health protection against intoxication. • Skills: can recognize intoxications according to the clinical manifestations of intoxication. Can take measures to protect health from the risk of exposure to toxic factors and correctly use elimination options in case of intoxication. • Competences: the student knows how to use the acquired knowledge and skills in toxicology in the implementation of state health supervision, as well as in other activities resulting from the tasks of public health. 	
Course contents: Course contents: Basic concepts in toxicology, Toxicological disciplines and their connection with medical fields. The term toxic substance. Latent dose. Exposure. General toxicology. Ways and mechanisms of entry of poisons into the body, entry gates. Absorption of poisons and their metabolism. Distribution and kinetics of toxic substances in the body and possibilities of elimination of toxic substances from the body. Acute, chronic toxicity and late effects of chemical substances and mixtures. Toxic properties of selected inorganic substances and organic substances. Toxicology of pesticides, warfare agents. Radioactive substances. Vitamins. Toxicology of narcotic and	

psychotropic substances, the most commonly used drugs. Toxicology of animal toxins. Toxicology of plant toxins. Toxicology and drug addiction. Regulatory toxicology. Classification of chemical substances and mixtures according to toxicity..
