COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1013W/22	Course title: Anatomy 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites: KFYZIO/54F1001W/22	
Requirements for passing the course: Determined courses: Anatomy 1 final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Vedomosti: pozná základné anatomické pojmy, pozná anatomické názvoslovie, má podrobné vedomosti o anatómii skeletu, svalovej sústavy a kože • Zručnosti: má vedomosti štruktúry a funkcie obehového, dýchacieho, tráviaceho, vylučovacieho a reprodukčného systému. • Kompetentnosti: vie prepájať vedomosti z anatómie s odbornými predmetmi, využívanie vedomostí z anatómie v odbornej klinickej praxi. 	
Course contents: <ol style="list-style-type: none"> 1. Anatomy and work of the heart, blood circulation, overview of blood vessels. 2. Blood circulation and lymphatic circulation. 3. Anatomy of the respiratory tract and organs. 4. Structure and function of the digestive tract. 5. Liver, pancreas, digestive juices. 6. Kidneys, urinary tract - structure and function. 7. Anatomy of male and female genitals, reproduction. 8. Anatomy and function of organs of the endocrine system. 9. Nervous system, peripheral nerves. 10. Structure and function of the central nervous system: brain, spinal cord. 11. Autonomic nervous system. 12. Sensory organs. Exercises <ol style="list-style-type: none"> 1. The work of the heart. 2. Blood circulation and lymphatic circulation. 3. Breathing. 	

4. Digestive tube function. 5. Digestion 6. Excretion. 7. Reproduction. 8. Internal secretion. 9. Nervous system. 10. Central nervous system. 11. Autonomic nervous system. 12. Sensory organs.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1014W/22	Course title: Balneotherapy, Klimatotherapy, Hydrotherapy and Thermootherapy
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: Knowledge: controls the mechanism of therapeutic action of physical stimuli on the body as well as the effects, indications and contraindications of individual therapies. • Skills: applies individual procedures and monitors their physical effects on the human body, evaluates the possibilities of using individual procedures. • Competences: can design appropriate treatment using individual therapies according to their effect, can analyze the possibilities of their therapeutic use.	
Course contents: History of physical procedures. Characteristics, division, physical basis of individual procedures. Mechanism of action of procedures. Physiological effects, principle of application and its practical implementation. Indications and contraindications of individual procedures. Balneotherapy: medicinal water-drinking treatments, inhalations, peloids. Bioclimotherapy, Speleotherapy, Meteorosensitivity, Heliotherapy. Thalassotherapy. Thermootherapy: positive and negative. Hydrotherapy: partial and total baths, additive baths. Electrotherapy: flow of electric currents through tissues, I / t curve, electrodiagnostics - electrostimulation, electrogymnastics, direct current (iontophoresis, hydrogalvan, galvanic bath), alternating current - low frequency (diadynamic currents, TENS, Träbert currents, interference frequency group) currents, amplitude modulated currents), high frequency current (shortwave, microwave and ultrawavelength diathermy). Sonotherapy. Magnetotherapy. Phototherapy: infrared and ultraviolet radiation, laser therapy, polarized light-biolamp.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1017W/22	Course title: Classical and Reflex Massage
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the basic anatomical concepts, nociception and expected changes caused by nociception • Skills: can name reflex changes and perceives the human body, its individuality, reflex changes and manifestations caused by nociception through tactile perception. • Competences: can apply classical and reflexology massage, controls individual massage procedures 	
Course contents: Learning outcomes: <ol style="list-style-type: none"> 1. Introduction to massage, goal of massage, organization of teaching. 2. History of massage. 3. Basics of palpation - touch: friction, wiping, rubbing, beating, shaking, shaking. 4. Modified tactiles. 5. Massages - its types, indications, contraindications. 6. Hygiene, effects. Method of massage. 7. Massage means. 8. Effects of massage. 9. Psychosocial aspects of work in the client's intimate zone. 10. Basic sets of classical massage. 11. Use of classical massage in prevention and therapy. 12. Indications and contraindications of classical massage. 13. Characteristics and types of reflex massage. 14. Segmental, periosteal and ligament massage. 15. Reflective manifestations. Reflex projection of individual organs on the body surface. 16. General rules of dosage of reflex massage. 17. Segmental technique of reflex massage. 	

18. Bipolar effect. Reflex shifts Indications of reflex massage. 19. Absolute and relative contraindications of reflex massage. 20. Examination procedure before massage. 21. Basic sets of segmental reflexology technique: - dorsal assembly - head and neck assembly 22. Basic sets of segmental reflexology technique: - thoracic assembly - pelvic assembly 23. Additional sets of segmental reflexology technique: - upper limb accessory assembly 24. Additional sets of segmental reflexology technique: - additional assembly for the lower limb

Credits: 3	Working load: 75 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Determined courses: Continuous professional practice 1 final evaluation: practical skills, case study The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: has knowledge of basic nursing care and basic physiotherapy examination • Skills: can apply the acquired skills in nursing care within the competence of a physiotherapist and performs basic physiotherapeutic examinations. • Competences: can practically handle physiotherapeutic diagnostics in clinical conditions. 	
Course contents: 1. Nursing: Basic nursing care for the sick. Hygienic care, positioning of patients, prevention of pressure ulcers. Emptying. Bed care. Handling with the patient. Dressing technique. Serving food. Monitoring, measuring and recording physiological functions. Work with central oxygen distribution. Attendance at the visit. Principles of drug application. 2. Physiotherapy: Practical application of balneo-, thermo-, mechano- and hydrotherapeutic procedures. Practical application of classical massage sets in prevention and therapy. Measurement of body height and weight. Examination and measurement of ranges of mobility in the joints of the limbs using a goniometer. Examination and measurement of the range of motion of the spine by a measuring tape. Record keeping of joint mobility by SFTR method. Anthropometric measurement of the torso, limbs and their subsequent recording. Practical implementation of forms of passive and active movement with limb fixation and guidance.

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1051W/22	Course title: Clinical Practice 3
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: hours per semester: 192s Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites: KFYZIO/54F1040W/22	
Requirements for passing the course: Determined courses: Clinical exercises 2, Continuous professional practice 4 final evaluation: practical skills, case study The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: Knowledge: has knowledge of basic methods of diagnostics and procedures of movement therapy in individual medical disciplines. • Skills: can assess the patient's condition, draw up a medical rehabilitation plan and apply kinesiotherapy methods. • Competences: can practically master physiotherapeutic diagnostics in clinical conditions, can apply the acquired skills in nursing care within the competence of a physiotherapist and applies physiotherapeutic examination for the subsequent selection of a suitable method of kinesiotherapy. It acquires a professional approach to patient communication, assertive behavior and empathy.	
Course contents: Physiotherapeutic diagnostics, compilation of a therapeutic plan, use of kinesiotherapy and physical therapy methods in patients with frequent diagnoses in the given clinical fields: 1. traumatology - kinesiotherapy during injury healing, complications of healing, secondary prevention of the consequences of injury and immobilization, rehabilitation after injury of soft tissues, after injury of bones and joints of limbs, 2. internal medicine - cardiovascular training and musculoskeletal management in ischemic heart disease, 3. neurology - care of a hemiparetic patient and basics of kinesiotherapy according to the Bobath concept 4. surgery - kinesiotherapy in abdominal and thoracic surgery in preoperative care, after surgery and in convalescence, scar care, complications of healing and inactivity, 5. gynecology and obstetrics	

- kinesiotherapy in conservative and operative treatment in gynecology, kinesiotherapy during pregnancy and after childbirth.

It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: Knowledge: knows professional terminology in communication with the patient in the German language in various situations, knows professional terminology in hospitals and medical facilities in German, knows German terms for completing medical records. • Skills: can apply the acquired knowledge in contact with a German-speaking patient, apply knowledge in hospitals in German-speaking countries. • Competences: to treat a German-speaking patient independently, to orientate in a hospital in German-speaking countries, to make records in medical records in German.	
Course contents: 1. Grammatik: Zeitangaben und Ortsangaben. 2. Aufnahme-und Anamnesegespräch. 3. Hilfsmittel benennen. Pflegeanamnese erheben. Krankengeschichte erfragen. 4. Erbkrankheiten. Ein Infarkt kündigt sich an. 5. Erkrankungen. Fachwortschatz deutsch benennen. 6. Grammatik: Perfekt und Satzklammer. 7. Die Atmungsorgane. Fachwortschatz deutsch benennen. 8. Die Vorbereitung zur Operation. Narkoseprotokoll lesen. 9. Die Operation. Instrumente benennen. Über die Operation informieren. 10. Die Übergabe aus dem Operationssaal. 11. Medizingeschichte: Ernst Abbe. 12. Grammatik: Zeitangaben mit temporalen Präpositionen.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1033W/22	Course title: Internal Medicine
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: written exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the basics of internal medicine, distinguishes between sub-disciplines (cardiology, angiology, pneumology, nephrology, gastroenterology, endocrinology, rheumatology, immunology, hematology); knows about the energy side of nutrition, knows the importance of diet therapy and alternative types of nutrition • Skills: can apply knowledge of internal medicine, geriatrics in the interpretation of anamnestic data and objective findings. After evaluating the current state, he decides on the application of physical therapy, physical exercise, can apply knowledge about proper nutrition in relation to diseases, can analyze the basic principles of balance in nutrition and diet. • Competences: can evaluate the effect of treatment on the basis of improvement of subjective difficulties, objective findings, etc., be able to evaluate vital functions, evaluate the body's response to physical exercise and do not perform these in serious diseases, identify some acute conditions that could be life-threatening 	
Course contents: Internal Medicine Course characteristics. 2. The main symptoms of internal diseases. 3. Diseases of the circulatory system. 4. Diseases of the respiratory system, tuberculosis. Basics of nephrology. 5. Diseases of the endocrine system, diabetes mellitus, disorders of bone metabolism. 6. Diseases of the gastrointestinal system. Basics of hematology and transfusiology. 7. Basics of immunology. 8. Basics of rheumatology - inflammatory diseases. 9. Basics of rheumatology-degenerative diseases. 10. Basics of rheumatology - systemic connective tissue diseases, osteoporosis. 11. Acute conditions in internal medicine. 12. Physical causes of diseases Geriatrics Biological and mental aging. 2. Social aging. 3. Somatic involution changes in individual systems. 4. Polymorbidity. 5. Psychology and senile psychopathy. 6. Positive memory - brain jogging. 7. Functional diagnostics in geriatrics. 8. Active lifestyle in old age. 9. Healthy geront nutrition. 10.	

The importance of mental education. Motivation. 11. Disorders of stability and mobility in old age. 12. Terminal stage of life.

Nutrition science

Nutrition science in a historical context. Basic principles of nutrition assessment and nutrition disorders. 2. Nutrition assessment. Nutrient metabolism. Metabolism of vitamins, minerals and water. 3. Regulation of metabolism. 4. Basic eating disorders and their treatment. 5. Examination methods in eating disorders. 6. Principles of rational nutrition for different age groups. 7. Nutrition and mental and physical activity. 8. Diet therapy and diet system. 9. Therapeutic nutrition in various disease states. 10. Enteral nutrition. Parenteral nutrition. Combined enteral and parenteral nutrition in selected diseases. 11. Treatment of water and mineral management disorders. 12. Alternative ways of nutrition.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1031W/22	Course title: Kinesiology and Pathokinesiology 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 0 hours per semester: 24 / 0 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Prerequisites: Kinesiotherapy methods 2, Physiotherapeutic diagnostics 2 final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: Knowledge: knows the basics of motor ontogenesis, understands the dynamics of momentum development related to the gradual maturation of the CNS, knows the development of gross and fine motor skills and posture and their specifics from birth to adulthood. • Skills: can recognize postural and motor disorders of children and the adult population. Can design adequate treatment in the detection of motor and postural abnormalities. Can assess the degree of damage to the will. He is familiar with the issue of infantile cerebral palsy. • Competences: has the ability to analyze and synthesize in the kinesiological analysis and evaluation of the neuromuscular system, based on the principles of ontogenesis and the development of human motor skills,	
Course contents: Brief subject scheme: 1. Movement as the basic manifestation of living, movement behavior, the impact of movement for life processes, external environment and society, relationships, sport and motion compensation. 2. Connective tissues structure and function: ligament, cartilage, bone. Morphology, physiology, growth and evolution, nutrition, biomechanics, defects and regeneration of individual tissue types. 3. Continuous and contact bone connections – structure, movements. 4. Individual joint parts biomechanics nutrition, innervation, joint afference. 5. Pathological changes and individual joint parts regeneration. 6. Muscle tissue- structure, action potential and muscle tissue contraction mechanism, myoneural disc, types of muscle tissue. 7. Skeletal muscle- structure, muscle and bone connection.	

8. Bursas, sheaths, fascias, vasculat supply, senzoric organs a nerve endings in the muscle, muscle tension and muscle consistency.
9. Functions of muscle tissue in pathological conditions, regeneration abilities.
10. Neurone, body, protrusions, receptor, conductive and exciting membrane.
11. Depolarization, excitement, synapse, integration and coding function of the neuron.
12. Output part of the cell, efector, metabolic neuron requirements, damage and possibilities of regeneration of nervous tissue.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1046W/22	Course title: Kinesiology and Pathokinesiology 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites: KFYZIO/54F1031W/22	
Requirements for passing the course: Prerequisites: Kinesiology and pathokinesiology final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: The student analyzes the involvement of skeletal muscles in the locomotor chains. Identifies pathological patterns and stereotypes. Describes the control of movement by the central and peripheral nervous systems. Identifies and evaluates the impact of CNS disorders by performing backward movements. • Skills: can understand and master the principle of motion control. It documents deviations from physiology. He can recognize their malformation and malfunction. Can analyze the stereotype of walking and prototyping activities and the involvement of skeletal muscles in the locomotor chains. • Competences: can perform kinesiological analysis. Can assess the degree of damage to the will. He proposes a kinesiotherapy plan and a program to restore will movement. Can integrate motion control principles into motion stereotypes and prototype activities. He can implement their reeducation in post-traumatic conditions and diseases. 	
Course contents: General principles of motion control. 2. Control at the spinal level - internal structure of the spinal cord, motoneurons, posterior spinal roots, interneurons, reciprocal innervation, spinal motor circuits, muscle tone, gamma system, plurisegmental reflexes, postural and defensive reflexes, neck reflexes. 3. Motor control at the supraspinal level - reticular formation, vestibular nuclei, cranial nerves. 4. The role of the brain in motor control, functional anatomy of the brain, cerebral pathways. 5. Subcortical motor circuits - thalamus and basal ganglia. 6. Management of somatic functions by the cerebral cortex, architecture of the cerebral cortex. 7. Pyramid and extrapyramidal system. Ascending and descending CNS pathways. 8. Kinesiology and pathokinesiology of joints. 9. Kinesiology and pathokinesiology of the spine. 10. Kinesiology and pathokinesiology of the	

chest and shoulders. 11. Kinesiology and pathokinesiology of walking. 12. Kinesiology and pathokinesiology of prototype activities.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1003W/22	Course title: Latin Language
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: During the semester: Individual or group work on exercises with active solution of model situations and practical mastery of the subject. Final assessment: The written form of the final exam covers the curriculum of the whole semester, in which students demonstrate the level of their knowledge. At the written final exam, the student can obtain max. 60 points. 100% active participation in the exercises is required for admission to the exam, any non-participation must be justified or replaced at another date of the exercises in parallel fields.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the minimum of Latin grammar, which is a prerequisite for mastering the basics of Latin medical terminology. • Skills: can use the acquired knowledge in practical professional activities, in the study of professional literature and in parallel professional subjects, to use medical terminology accurately and linguistically in oral and written form. • Competences: can demonstrate knowledge of medical terminology in Latin-Greek form with an inner understanding of its structure. 	
Course contents: <ol style="list-style-type: none"> 1. Historical and linguistic introduction to medical Latin, Latin and Greek in medical nomenclature, structure of multiword terms. 2. Latin pronunciation, basic grammatical terms, practice of correct reading of Latin medical terms. 3. Declension of nouns with a focus on the frequency of the genitive, the accusative and the ablative. 4. Adjectives, their declension and connection with nouns, use of degrees. 5. Adverbs, use of prepositions in medical terminology and their connection with nouns in accusative and ablative. 6. Numerals, their use and declension, expression of quantity. 7. Verbs in pharmaceutical terminology, recipe. 8. Latin and Greek prefixes and suffixes, terms with Latin and Greek basis. 9. Greek equivalents of basic anatomical terms and terminology used in the clinic. Advocacy of suffixes. 10. Compound words. Principles of composite formation. Simple diagnoses. 11. Latin sentences still valid today. Active work with terminological expressions. 	

12. Practical exercises and tasks, creating multiword terms and automation of common connections.
13. Systematization and verification of acquired knowledge.

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1061W/22	Course title: Law and Legislation
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject: During the semester: lectures Final rating: at the final verbal exam can student get maximum 60 points - he answers 3 questions in three topics – general health legislation, competences of a physiotherapist and a case study. Self-study 40 hours	
Learning outcomes of the course: Course objective: The importance of law and its function in society, its application in health care, the acquisition of basic concepts in the organization of the work of a health worker with a focus on a physiotherapist Theoretical knowledge: To teach students to understand the basics of law and competence of health professionals with a focus on physiotherapists. Practical skills: The student will gain comprehensive knowledge and skills in accessing case studies from clinical practice.	
Course contents: Basics of management, definition, procedures, characteristics. personal management. Marketing in healthcare, economic concepts, their use and meaning. History of health care. Healthcare - organization and health systems. Healthcare and health services in the social market economy. Forms and structure of medical facilities. Medical professions and their characteristics. Health systems in individual EU countries and in some countries around the world. Organization and methods of providing health services. Health care financing and methods of financing according to the type of care. Contributory and budgetary organizations. Health insurance, types and basic characteristics. International cooperation in healthcare. WHO.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1004W/22	Course title: Methods of Kinesiotherapy 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 12 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: demonstrates basic knowledge of the nature and principles of kinesiotherapy, knows the issues of the musculoskeletal system and can distinguish the application of basic elements of kinesiotherapy. • Skills: practically applies appropriate kinesiotherapy and demonstrates special methods in clinical exercises. • Competences: can design the basic elements of kinesiotherapy, can distinguish muscle imbalance and appropriately reeducate it, can apply basic kinesiotherapy methodologies and use appropriate exercise aids. 	
Course contents: Theoretical foundations of physiotherapy. Basic concepts in kinesiotherapy. Basic elements of kinesiotherapy - movement, types of movements. Positioning. Vascular gymnastics and vascular training. Respiratory gymnastics. Strength training - muscles with a tendency to weaken. Relaxation exercises - muscles with a tendency to shorten. Posture reeducation - muscle imbalance. Relaxation exercises. Exercise unit - individual and group exercise. Exercise aids.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1018W/22	Course title: Methods of Kinesiotherapy 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 12 / 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites: KFYZIO/54F1004W/22	
Requirements for passing the course: Determined courses: Methods of kinesiology 1 final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: defines the essence and principles of selected methods of kinesiotherapy, masters selected methodologies of the musculoskeletal system and applies them with correction. • Skills: practically masters the elements of selected kinesiotherapy methodologies, acquires skills and accuracy in their implementation and can use them appropriately in clinical practice. • Competences: can create a rehabilitation program using appropriate methods in musculoskeletal disorders, can apply selected methods of kinesiotherapy and appropriately determine the use of compensatory aids. 	
Course contents: Construction of a rehabilitation program. Soft techniques. Corrective positioning. Stretching. Exercise according to the Muscle Test. Movement reeducation according to Sister Kenny. School back- reeducation of movement stereotypes. Kaltenborn method - mobilization of the axial organ. Automotive exercises - spine and peripheral joints. Method S. K. Vogelbach- exercise on fitlopte. Walking training with aids - the use of different types of crutches and walkers. Hydrokinesiotherapy - the possibility of using water in exercise.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1029W/22	Course title: Methods of Kinesiotherapy 3
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites: KFYZIO/54F1018W/22	
Requirements for passing the course: Determined courses: Methods of kinesiology 2 final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows neuromuscular techniques, methods based on developmental kinesiology and methods used in the treatment of musculoskeletal disorders. • Skills: practically masters the application of neuromuscular techniques for individual parts of the locomotor system and appropriately uses selected methodologies in impaired locomotor function. • Competences: can analyze impaired motor function and apply subsequent treatment, can apply methods to reeduce the musculoskeletal system. 	
Course contents: Neuromuscular techniques - characteristics of PIR, AGR, RI. Postisometric relaxation and autotherapy - head, neck, torso, upper limb, pelvis, lower limb. Approaches based on ontogenetic development - Vojta's reflexive principle and DNS. Deep stabilization system and Pilates method. Functional disorders of the locomotor system and methods focused on physical education and proper posture - the method of B. Mesendiecková, F. M. Alexandra, M. Feldenkreis. Sensorimotor stimulation method - Freeman method, proprioceptive training, Janda and Vávrová method. R. Brunkow method and ACT-characteristics and methodical procedure of the exercise. Ľudmila Mojžišová's method - treatment of functional female sterility.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1043W/22	Course title: Methods of Kinesiotherapy 4
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites: KFYZIO/54F1029W/22	
Requirements for passing the course: Determined courses: Methods of kinesiology 3 final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the nature and principles of R. McKenzie's method, Brügger's concept, Bobath's method, Basal stimulation and has knowledge of manual therapy of peripheral joints. • Skills: practically masters the McKenzie method with a distinction of individual syndromes, analyzes the principle of motor lifestyle according to Brügger on the principle of three-gears, applies rehabilitation nursing and reeducation of movement in the treatment of hemiparetics according to Bobath, masters elements of basal stimulation and manual therapy of peripheral joints. • Competences: can apply the principle of proper motor lifestyle, can design treatment for vertebrogenic diseases, can use movement reeducation and rehabilitation nursing in the treatment of hemiparetics, can use manual therapy to block peripheral joints. 	
Course contents: R. McKenzie's method. Brügger's concept - the principle of good physical life. Bobath concept in rehabilitation of hemiparetics - rehabilitation nursing, physical reeducation, daily activities, treatment for independence. Elements of Basal Stimulation. Peripheral joint mobilization techniques - characteristics of a functional disorder in the joint, its diagnosis and handling treatment. Manual therapy in the peripheral joints of the upper limb - shoulder joint, elbow joint, wrist joint, hand, fingers, thumb. Manual therapy in the peripheral joints of the lower limb - hip joint, knee joint, ankle joint, foot, toes, thumb.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1045W/22	Course title: Neurology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 3 hours per semester: 36 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Neurology: In the final exam, the student can get max. 13 points. The final evaluation will be based on the points obtained from the examination during the semester and from the final test. Final evaluation: the final evaluation will be based on the total number of points obtained from the examinations and the oral exam.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the basics of neurological pro-predeutics and examination methods used in neurology, knows the objective symptoms and assess the patient's subjective difficulties, knows the basic examination procedures in neurology and psychiatry, masters the history of objective examination of the patient; can identify an acute condition in psychiatry. • Skills: can apply the basics of reflexology in neurology, can examine sensitivity, motor skills in the patient, examine cerebral, extrapyramidal, symbolic functions, exclude meningeal syndrome, examine the peripheral nervous system and vertebrogenic disorders; uses theoretical knowledge of psychoiatry in the practical activities of physiotherapeutic practice. • Competences: knows the basic examination procedures in neurology, performs an objective examination of the patient, can recommend paraclinical examinations, establish a diagnosis and treatment and rehabilitation plan; can manage basic psychopathological symptoms, distinguish the main groups of mental disorders - the difference between neurotic, psychotic state, withdrawal symptoms in addictions, manifestations of organicity. 	
Course contents: <ul style="list-style-type: none"> • Neurology (2 hours per week) Introduction to neurology, short history, terminology in neurology, neurology and rehabilitation, neurology and physiotherapy, neuron, glial cells, synapses, cell membrane). 2. Sensitivity and its disorders, receptors, reflexes, momentum, mobility, motility, motor functions, central and peripheral motoneuron, pyramidal pathway, cerebellum. 3. Central nervous system, brain, meninges, cerebrospinal fluid, blood-brain barrier, lumbar puncture, CNS cavities, cerebral lobes,	

phatic functions. 4. Cranial nerves I.-XII. Vascular system of the nervous system, strokes. 5. Injuries of the nervous system, disorders of consciousness, Pain, pain tests, painful conditions in neurology, psychogenic pain, dementia. 6. Peripheral neuron disorders, neurapraxia, axonothesis, neurothesia, clinical manifestations of peripheral nerve lesions. Extrapyrarnidal system disorders, Parkinson's disease. 7. Cerebral palsy, multiple sclerosis. 8. Tumors of the nervous system. 9. Seizure disorders. 10. Degenerative diseases of the nervous system. Autonomic nervous system. 11. Neuroinfections. 12. Examination methods in neurology.

Stroke, atherosclerosis, rehabilitation of patients with CMP. 2. Nervous system injuries, use of physiotherapy in patients with NS injuries. 3. Disorders of consciousness, pain, pain examination, painful conditions in neurology, psychogenic pain. 4. Peripheral neuron disorders, neurapraxia, axonothermia, neurotmosis. 5. Clinical manifestations of peripheral nerve lesions and their rehabilitation, the importance of physiotherapy in patients with PN lesions. 6. Degenerative diseases NS, Parkinson's disease, dementia, the importance of rehabilitation in these patients. 7. Demyelinating diseases of the CNS - the importance of rehabilitation in these patients. 8. Cerebral palsy - the importance of rehabilitation in these patients. 9. Tumors of the nervous system. 10. Seizure disorders. Autonomic nervous system and its disorders. Neuroinfections. 11. Basics of neurosurgery. 12. Neurosurgery in rehabilitation.

Psychiatry (1 hour per week)

Introduction to the issue. Mental health. Psychiatric disorder. Causes of mental disorders. Prevention of mental health disorders. Psychopathology. Affective mental disorders. Schizophrenia, delusional disorders. Psychogenic mental disorders, personality disorders. Addictions to psychoactive substances. Gerontopsychiatry. Organic mental disorders. Emergency psychiatry, problems of suicidality. Child and adolescent psychiatry. Therapy of mental disorders. Some legal and ethical issues in psychiatry. Nursing practice and work with a psychiatric patient.

Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the position of occupational therapy in the overall treatment program. He has an overview of occupational therapy procedures for selected diagnoses and skill in basic methods of occupational therapy • Skills: can apply adequate occupational therapy activity. Implements training in routine activities with the patient. Applies ergodiagnostic tests, creates an occupational therapy program, creates a suitable program for retraining and resocialization of the patient • Competences: can design barrier-free living conditions for the patient, can evaluate the safety standards of aids and the safety of sheltered workshops. 	
Course contents: <ol style="list-style-type: none"> 1. Basic concepts and history of occupational therapy. 2. Objectives, tasks, methods and classification of occupational therapy. 3. Therapeutic education for independence. Practical mastery of the compensating aid. Practical training of common daily activities. 4. Treatment by employment and elements of therapy by work activities in medical rehabilitation. 5. Work with paper, textiles and natural materials. 6. Methodical procedures of occupational therapy for individual diseases (neurology) 7. Methodical procedures of occupational therapy for individual diseases (traumatology) 8. Methodical procedures of occupational therapy for individual diseases (orthopedics, surgery) 9. Methodical procedures of occupational therapy for individual diseases (pediatrics) 10. Basic examination and elaboration of a therapeutic occupational therapy program. 11. Ergodiagnosics - tests usable in physiotherapy: Barthel's index, ADL, ASIA test, Brunnstrom test, self-service test, communication skills. 12. Scales for patient evaluation (Kurtzsky scale for multiple sclerosis)

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1048W/22	Course title: Orthopedics and Prosthetics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites: KFYZIO/54F1035W/22	
Requirements for passing the course: Terms of accomplishing the course: During the semester: presence on all lectures Final examination: written exam Hodnotenie predmetu: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% FX – 59%- 0%	
Learning outcomes of the course: Educational results: Aim of the course: To introduce students to basics of general and special surgery. To acquaint students with basics of orthopaedics and prosthesis, with focus on musculoskeletal system. Theoretic knowledge: Student has knowledge of orthopaedics and prosthesis. Practical abilities: Student is able to apply knowledge of all the newest diagnostic and therapeutic procedures in orthopaedics and prosthesis.	
Course contents: Base course structure: 1. Orthopaedics – term and conception of this discipline, history. 2. Birth defects and system illnesses. 3. Aseptic bone necrosis. 4. Chest and spine defects and deformities. 5. Chest and spine prosthesis. 6. Lower limb static defects. 7. Orthopedic surgery – overview.	

8. Amputations, exarticulatio, transplantations, replantations. 9. Cardiosurgery, Vascular surgery. 10. Prosthesis. 11. Plastic and correction surgery, hand surgery and prosthesis. 12. Neurosurgery.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1044W/22	Course title: Paediatrics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Qualifying subjects: without continuity. Requirements for passing the subject: during semester: attendance on lectures. Final evaluation: written exam. Evaluation of the subject: A – 100% to 93%, B – 92% to 85%, C – 84% to 77%, D – 76% to 69%, E – 68% to 60%, FX – 59% to 0%.	
Learning outcomes of the course: Main objective: characterize pediatrics as a medical field, its concept and relations with other medical fields. Theoretical knowledge: student has the knowledge about prevention, diagnostics and therapies of different diseases and health conditions in pediatrics. Practical skills: student can comprehend and illustrate the role of parents and the function of family unit for healthy child development in society in clinical practice.	
Course contents: 1. Definition of the medical field, historic evolution, interdisciplinary status, physiology of a child. 2. Physiology and pathology of a newborn. 3. Development of a healthy child. 4. Nutrition. 5. Diseases of individual systems in childhood and therapy. 6. Respiratory diseases, gastrointestinal diseases. 7. Hematological diseases, cardiovascular diseases. 8. Immunoalterative (immunological) diseases, endocrine and metabolic disorders. 9. Uropoetic and kidney diseases, congenital defects, acute (sudden) events, infectious diseases. 10. Physiology and pathology of newborn age, low birth weight newborn.	

11. At-risk child.					
12. Skin diseases in infants. Disease prevention in childhood.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1022W/22	Course title: Pathology and Pathological Physiology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 0 hours per semester: 24 / 0 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites: KFYZIO/54F1001W/22	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: Pathology is a scientific discipline dealing with changes in the human body during illness. It explains the origin and manifestations of individual diseases. Know the basic terminology in the field. Gain knowledge of general pathology about the pathomechanism of fever, inflammation, hypoxia, shock, stress, etc. About the change in the structure and function of individual organs during the disease. . • Skills: The student defines the nature of the disease and health, has knowledge of the etiology, pathogenesis and disease prevention, differences between hereditary, congenital and acquired disease, has knowledge of the pathology of inflammation, cell pathology, malignant cell transformation, thermoregulatory disorders, water and electrolyte management , about shock, collapse, stress, etc. He has knowledge of the pathogenesis of diseases of various organ systems. • Competences: In practice, he / she can apply theoretical knowledge about basic pathomorphological and functional changes of individual organs in disease processes to clinical practice and use it in assessing the patient's condition. 	
Course contents: Characteristics of the field, definition of the disease, health. Etiology, pathogenesis and disease prevention. The importance of heredity in the pathogenesis of diseases, stress. Inflammation (types and forms, inflammatory mediators), malignant cell transformation, pain. Fever, disorders of aqueous and electrolyte metabolism and the internal environment. Pathophysiology of shock, collapse states, syncope. Pathogenesis of atherosclerosis and heart disease. Pathophysiology of the vascular system, pathogenesis of hypertension. Pathophysiology of the respiratory system diseases of the respiratory system. Pathogenesis and diseases of the uropoietic system. Pathogenesis pathophysiology of endocrine diseases and diabetes mellitus. Pathogenesis of GIT disease and GIT disease. Pathogenesis of the blood and hematopoietic system. Pathogenesis of the musculoskeletal system.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1011W/22	Course title: Pedagogy, Psychology and Sociology 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 3 / 1 hours per semester: 36 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral and written exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the basics of professional behavior and social communication. He understands personality as a bio-psycho-social being. He has knowledge of the characteristics, goals and principles of education with an emphasis on its specific aspects in the field of physiotherapy. • Skills: can apply knowledge and skills in everyday social and professional communication. In clinical practice, he uses communication knowledge, applies communication skills and experience, and applies and improves professional behavior in social interaction with the patient. He can apply practical skills that will help him analyze current ethical issues affecting the field of physiotherapist's work. • Competences: can make independent decisions in the performance so that it adheres to established and beneficial ethical principles - principles. He applies sociological knowledge in socio-technical solutions in the field of his practice in clinical practice. He understands personality as a bio-psycho-social being and can analyze psychological cognitive processes in individuals and transform them into a physiotherapeutic process. Implements effective education for healthy and sick people, while correctly applying the principles, principles and appropriate strategies of education 	
Course contents: <ul style="list-style-type: none"> • Sociology: The position of sociology in the system of sciences, subject, character and division of sociology. 2. Development of sociology and main sociological theories. 3. Social interaction and its types. 4. Social relationship and social networks. 5. Company. Typology of companies. Perception of society by various authors. 6. Culture and its components. Cultural ethnocentrism and cultural relativism. 7. Standards in society. Standards makers. Sanctions. Social control. 8. Elements of social structure - soc. status, soc. role and social institution. 9. Socialization. Sociological theories of socialization. 10. Social conformity, nonconformity and deviation. 11. Social institutions: marriage, 	

family, religion. 12. Health and disease from the point of view of sociology. and ethics. Ethics and communication with the patient

Psychology

Introduction to the study of the subject. 2. Subject, goals and tasks of psychology. Branches of psychology. 3. Psychological research methods. 4. Consciousness, unconsciousness. Biological and social determination of the human psyche. 5. Man as a bio-psycho-social being. 6. Cognition of personality. Mental processes. 7. Developmental psychology. 8. Medical psychology - subject, classification, goals and its tasks. 9. The impact of the disease on the human psyche. 10. Iatropathogenesis, sorrowigenia. Psychology of fear and anxiety. 11. Challenging life situations. Stress and stress management. 12. Mechanisms of mental adaptation. The importance of psychology in the healing process ..

Pedagogy

Subject and goals of pedagogy, pedagogical disciplines. 2. Characteristics, goals and principles of education. 3. Ethical and legal aspects of education. 4. Education and the process of change. 5. The importance of education in the profession of physiotherapist. 6. Determinants of education, barriers of education. 7. Motivation in education. 8. Methods, forms and means of education, use of the Internet in education. 9. Education and its focus in various forms of health care. 10. Education and its specifics in individual developmental periods of man, health education as a part of education. 11. Education in socio-cultural context. 12. Methodical aspects of preparation of educational materials.

Psychology exercises:

Self-awareness. Biological and social determination of the human psyche. 2. Activation-motivational personality traits. 3. Cognition of personality. 4. Characteristics of individual development periods. 5. Autoplastic picture of the disease. 6. The process of adaptation of the patient to the disease. 7. Man's relationship and attitude to the disease. Premorbid personality. 8. Iatropathogenesis, sorrowigenia. 9. Psychological problems of the seriously ill and dying. 10. Conflicts. Frustration. Deprivation. Stress and stress management. 11. Burnout syndrome. 12. The importance of psychology in the treatment process

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1021W/22	Course title: Pharmacology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 0 hours per semester: 24 / 0 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: written test The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. To successfully complete the final written examination, the student must obtain at least 60% of the total number of points. The overall evaluation of the student will consist of the evaluation of continuous control tests, evaluation of activity in exercises, evaluation of the final test. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: has knowledge of the roles of pharmacology, mechanism of action of drugs, pharmacokinetics and pharmacodynamics of drugs, their absorption, transport, biotransformations, excretion, their interrelationships and interactions, NUL, types of treatment, placebo therapy, research of new drugs, drug forms. He has knowledge of the pathophysiology of pain, treatment options and influencing pain in an alternative way. • Skills: can use knowledge of storage, ordering, distribution of drugs, labeling of drugs, routes, methods of drug administration, dosing of drugs, principles of handling and administration of drugs and mathematics in pharmacology. Masters the methods of influencing pain. • Competences: controls the systematization of pharmacotherapeutic groups as well as their profile. Masters the correct terminology of pain, works according to the principles of pain treatment. He can evaluate pain according to VAS, he can use kinesiotherapeutic procedures to relieve and eliminate pain. 	
Course contents: Pharmacology Introduction to the subject, history, definition and tasks of pharmacology, mechanism of action, drug interactions, pharmacokinetics, pharmacodynamics, agonism, antagonism, placebo therapy 2. NUL, types of treatment, new drugs, drug forms, resorption, transport, biotransformation, excretion 3. Basic terminology in pharmacology, routes of drug administration, drug dosing, principles and methods of drug administration, mathematics in pharmacology 4. Pharmacology of the nervous system 5. Pharmacology of the circulatory system 6. Pharmacology of the respiratory system 7.	

Pharmacology of the digestive system 8. Pharmacology of the endocrine system 9. Pharmacology of blood and hematopoietic organs 10. Pharmacology of enzymes and vitamins 11. Pharmacology of antibiotics and chemotherapeutics, antihistamines, antiseptics and disinfectants 12. Pharmacology of chemotherapy, principles of administration

Pathophysiology and pain therapy

1. Definition of pain. 2. Pathophysiology of pain. 3. Types of pain, pain diagnosis. 4. Pharmacotherapy of chronic pain. 5. Side effects of analgesics, opiates. 6. Malignant pain. 7. Benign pain. 8. Non-pharmacological therapy, acupuncture, homeopathy. 9. Acute pain, postoperative pain. 10. Care for chronic patients, palliative care. 11. Specifics of pain treatment in children. 12. Management of pain treatment in childhood.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1032W/22	Course title: Physiotherapeutic Procedures in Clinical Disciplines 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the procedures of physiotherapy and their specifics in the medical fields of surgery, traumatology, orthopedics, internal medicine and rheumatology. He has detailed knowledge of injuries, diseases in the medical fields of surgery, traumatology and orthopedics, internal medicine and rheumatology. • Skills: can demonstrate practical skills in techniques, methods and methodologies of kinesiotherapy used in the medical fields of surgery, traumatology, orthopedics, internal medicine and rheumatology. Based on physiotherapeutic diagnostics, he can determine the rehabilitation plan and also evaluate its effectiveness. • Competences: can apply physiotherapeutic diagnostics in the medical fields of surgery, traumatology, orthopedics, internal medicine and rheumatology. Can implement physiotherapeutic procedures and apply kinesiotherapy in the above medical fields. 	
Course contents: Characteristics of physiotherapy in the relevant medical field. Anatomical-physiological, pathological and clinical aspects of selected most common diseases. Aims and tasks of physiotherapy, physiotherapeutic diagnostics, design of a complex physiotherapeutic program, selection of kinesiotherapy method, documentation, evaluation and practical implementation, in the fields of surgery, traumatology, orthopedics, internal medicine and rheumatology. I. Surgery, traumatology and orthopedics: 1. Physiotherapy in abdominal and gastrointestinal surgery and in thoracic surgery. 2. Physiotherapy in traumatology in bone and joint injuries. 3. Physiotherapy in traumatology after complicated injuries. 4. Physiotherapy in amputees. 5. Physiotherapy for poor posture. 6. Physiotherapy at TEP BK and TEP KK. 7 Arthroscopy .. II. Internal medicine: 8. Physiotherapy for cardiovascular diseases. 8. Physiotherapy in peripheral vascular diseases. 9. Physiotherapy for selected respiratory diseases.	

III. Rheumatology: 10. Physiotherapy in inflammatory rheumatic diseases. 11. Physiotherapy in degenerative joint diseases. 12. Physiotherapy for painful shoulder syndrome.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1057W/22	Course title: Physioterapeutic Procedures in Clinical Disciplines 3
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites: KFYZIO/54F1047W/22	
Requirements for passing the course: Prerequisites: Physiotherapeutic procedures in clinical fields 2 final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: defines the etiology and etiopathogenesis of diseases in the medical fields of gynecology and obstetrics and pediatrics. He knows the clinical signs of the disease in pediatric patients. He has basic information and knowledge about psychoprophylaxis during pregnancy and care for the mother at six weeks. I know physiotherapeutic procedures in conservative and surgical treatment of the uterus and in functional sterility. • Skills: can select appropriate kinesiotherapy methods and design a rehabilitation program for pediatric patients and in gynecology and obstetrics. He plans a rehabilitation goal, knows how to assess and evaluate rehabilitation treatment. • Competences: can implement kinesiotherapeutic procedures and methodologies for selected diagnoses in gynecology and obstetrics and in pediatric patients. Can design physical therapy and apply patient and parent education. 	
Course contents: Selection of kinesiotherapeutic methods, documentation, evaluation and practical implementation in the field: kinesiotherapy for functional reproductive disorders, functional sterility, conservative therapy of diseases of the female reproductive organs, surgical treatment of female reproductive organs. Physical education during pregnancy, fitness preparation for childbirth, instruction on exercise in the sixth week. Physical education of newborns and infants, regeneration of the organism and reeducation of motor abilities after childbirth. Specifics of rehabilitation in pediatrics, - physiotherapy of children with poor posture and muscle imbalance, physiotherapy for developmental errors and deformities of the musculoskeletal system, physiotherapy for scoliosis.

Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: demonstrates theoretical knowledge of orientation on the human body, uses clinical examination procedures in FBLR, masters the examination of muscle imbalance, movement stereotypes and measurement of lengths, circumferences of the limbs and spinal motility. • Skills: masters practical skills in clinical and anthropometric examination in FBLR, assesses muscle imbalance and pathology of movement stereotypes. • Competences: can orientate on the human body, can use selected physiotherapeutic procedures in clinical examinations, can use palpation techniques and analyze muscle imbalance and movement stereotypes. 	
Course contents: Specific diagnostics in rehabilitation, functional approach to diagnostics. Orientation on the human body: anatomical position of man, anthropometric points, names of movements in the joints of the limbs and spine. Clinical examination in FBLR: Anamnesis, subjective examination, objective general and local examination (inspection, palpation). Examination of the quality and quantity of consciousness, examination of speech, patient position, constitution and nutrition. Examination of posture and gait. Anthropometry: measuring the lengths and circumferences of the limbs, chest, thigh. Caliper. Dynamometry. Measurement of spinal motility: Čepoj, Schober, Stibor, Thomayer, Fleche-Forestier, Otto indices. Examination of muscle imbalance. Examination of movement stereotypes.

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1056W/22	Course title: Physiotherapeutic Diagnostics 5
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites: KFYZIO/54F1042W/22	
Requirements for passing the course: Prerequisites: Physiotherapeutic diagnosis 4 final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: defines examination methods used in physiotherapy about current examination methods used in physiotherapy. He has knowledge of examination procedures used in physiotherapy for functional disorders of the axial system. Can compile algorithms for patient examination in individual clinical disciplines. He knows differential diagnosis. • Skills: can identify structural disorders, functional disorders and mixed disorders, describe and analyze them. Based on algorithms, he can design a physiotherapeutic treatment procedure, choose methods and means of kinesiotherapy. • Competences: can link imaging and differential diagnosis with the patient's musculoskeletal problem and determine the course of treatment. He can independently examine the patient's musculoskeletal system. Demonstrates observational skills and applies manual skills in the examination. 	
Course contents: Basic neurological examination: anamnesis, examination of muscle tone, reflexes, sensitivity, momentum, posture, gait, extinction. Special tests in neurology (ASIA test, Kurtzsky scale, opposition neck). Examination of a patient with NCMP, peripheral paresis, multiple sclerosis, Parkinson's disease. Kinesiological analysis and algorithm of examination of the pelvis, SI joint and analysis of their functional disorders. Kinesiological analysis and algorithm of lumbar spine examination and analysis of functional disorders in intervertebral joints. Kinesiological analysis and algorithm of thoracic spine examination and analysis of functional disorders in intervertebral joints. Kinesiological analysis and algorithm of cervical spine examination and analysis of functional disorders in intervertebral joints. Examination of the patient after surgery in individual movement segments of the axial organ. Examination of the patient after chest surgery and application of special	

tests. Examination of the patient in internal medicine and application of special tests. Examination of the patient after upper and lower limb surgery.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1065W/22	Course title: Postural Correction
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 24 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: final evaluation: written exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study 40 hours	
Learning outcomes of the course: Knowledge: has knowledge of the deep stabilization system, the nature, effects and the latest trends in posture correction methods and techniques, has knowledge of respiratory diseases and methods of physiotherapy for respiratory diseases • Skills: can use the knowledge of a deep stabilization system and master the latest methods and techniques for posture correction, can use them in clinical practice; can use modern methods of physiotherapy in respiratory diseases • Competences: masters the latest methods and techniques for posture correction, can use them in clinical practice, uses modern methods of physiotherapy for respiratory diseases in clinical practice	
Course contents: Brief syllabus: Postural correction Axis organ stabilization system. 2. Spiral dynamics. 3. Muscle balance in the braids of the upper and lower limbs. 4. Muscular torso balance. 5. Muscle balance in muscle chains. 6. Reciprocal relationships in muscles and joints. 7. Reciprocal relations in braids. 8. Reciprocal relationships throughout the body. 9. Disorders of muscle balance and reciprocal inhibition. 10. Pathological compensations. 11. Clinical applications. 12. Therapeutic influence of deep stabilization system. Exercises: Postural stability, correction standing, sitting, lying down, patient manipulation. 2. Spiral involvement of muscles in prototype activities. 3. Examination and treatment options for shortened and weakened muscles of the upper and lower limbs. 4. Examination and treatment options for shortened and weakened torso muscles. 5. Involvement of muscle loops in movement, exercise in open and closed chain. 6. Utilization of reciprocal inhibition in relation to movements in individual joints. 7. Utilization of reciprocal inhibition in upper and lower limb braids. 8. Use of reciprocal inhibition in the axial organ. 9. Detection of agonist and antagonist dysfunction in terms of muscle imbalance and reciprocal inhibition. 10. Detection of pathological compensation through movement	

stereotypes. 11. Application of means of compensation of muscle imbalance in clinical practice. 12. Conscious activation of the deep stabilization system through kinesiotherapy methods. Respiratory physiotherapy Respiratory physiotherapy - physiological nature and indication approaches. 2. Problems of the upper respiratory tract. 3. Respiratory hygiene techniques. 4. Autogenous drainage. 5. Neurophysiological stimulation of respiration. 6. Wind trainers. 7. Inhalation therapy. 8. Inhalation devices, their principle. 9. Climate therapy. 10. Speleotherapy. 11. Use of breathing apparatus. 12. Physical activity and inactivity and their impact on health.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1037W/22	Course title: Preventive Medicine and Hygiene
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Determined courses: without succession During semester: There will be at least one written test during semester where students can get a maximum of 20 points. At the final exam (written/oral) student can get a maximum of 80 points. Students can obtain together 100 points. During the lectures student will analyse assigned topics. Final evaluation: Final marking will be on the basis of the points obtained from the tests during semester and in the exam period. Course evaluation: A – 100 %-93 % B – 92 %-85 % C – 84 %-77 % D – 76 %-69 % E – 68 %-60 % FX – 59 %- 0 %	
Learning outcomes of the course: The aim of the course: Through the acquired knowledge and skills to create a comprehensive and conceptual view of prevention, preventive medicine and hygiene in the public health complex, individual sections of public health - their characteristics, content and methods of work, be able to act conceptually and preventively and think about preventive medicine, hygiene and public health in terms of preventive health care and the overall goal. Theoretical knowledge: To know the general and specific principles of health prevention, the scope and objectives of hygiene and public health, be able to act preventively and think about the management of the health team, department and the whole facility in terms of health care, prevention and hygiene, providing education and training of health care workers, use of prevention in individual areas of health care. Practical knowledge: To be able to use knowledge from individual areas of preventive medicine and hygiene departments, to be able to ensure the quality of preventive health services in the field of environment, nutrition,	

hygiene of children and adolescents and preventive occupational medicine, their evaluation, including the importance of health for individuals and society.

Course contents:

The structure of the course:

1. Preventive medicine, hygiene - public health, characteristics, position, development
2. Characteristics of individual branches of public health - hygiene
3. Determinants of health and factors influencing health
4. General epidemiology and prevention of communicable diseases
5. Epidemiology of non-infectious diseases of civilization
6. Environmental hygiene - air, soil, water, noise, housing and settlements
7. Hygiene of medical facilities
8. Preventive occupational medicine man and work environment
9. Nutritional hygiene - rational nutrition, food evaluation, eating together, food production.
10. Hygiene of children and youth
11. Protection against ionizing radiation
12. National health promotion program, the state of public health in Slovakia

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1019W/22	Course title: Reconditioning and Relaxation Exercises 2
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites: KFYZIO/54F1009W/22	
Requirements for passing the course: Prerequisites: Reconditioning-relaxation exercise 1 Conditions for completing the course: During the semester: active participation in exercises, practical demonstrations, methodical approach to exercises. Final evaluation: participation in exercises during the semester, practical mastery of fitness exercises Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% FX - 59% - 0%	
Learning outcomes of the course: Course objective: Explain the nature, goals and tasks of reconditioning-relaxation physical activities in the field of physiotherapy. Learn to name and graphically represent movement elements and exercise shapes. Theoretical knowledge: The student explains the nature, goals and tasks of reconditioning-relaxation exercises and other physical activities in relation to kinesiotherapy. Practical skills: The student demonstrates skills in the basics of physical education and sports and applies them in kinesiotherapy. Demonstrates the use of physical activities in kinesiotherapy from gymnastics, rhythmic exercises and fitness training.	
Course contents: Exercises: 1. Mutual relations: TV and sports, reconditioning-relaxation exercises, kinesiotherapy. 2. Selected chapters from the theory of physical culture. 3. Roles and goals of basic gymnastics in the system of physical culture.	

4. Distribution and characteristics of individual exercise elements without equipment.
5. Division and characteristics of individual exercise elements with equipment.
6. Terminology and nomenclature of individual exercises, in pairs, without tools and with tools.
7. Skiing and its use in kinesiotherapy.
8. Use of swimming in kinesiotherapy.
9. Athletics and its use in kinesiotherapy.
10. Use of tourism in kinesiotherapy.
11. Use of sports games in kinesiotherapy.
12. Movement games and competitions.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1034W/22	Course title: Science of Nutrition and Dietetics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Qualifying subjects: without continuity. Requirements for passing the subject: during semester: attendance on lectures. Final evaluation: written exam. Evaluation of the subject: A – 100% to 93%, B – 92% to 85%, C – 84% to 77%, D – 76% to 69%, E – 68% to 60%, FX – 59% to 0%.	
Learning outcomes of the course: Get basic knowledge about proper healthy nutrition, learn energetical side (perspective) of nutrition, ratio of main nutrients, importance of diet therapy, alternative diets. Theoretical knowledge: student gains knowledge about energetical (caloric) side of nutrition, knows the importance of diet therapy and alternative diet types. Practical skills: student is able to apply gained knowledge about proper healthy nutrition in relations with diseases, student can analyze fundamental principles of balance in nutrition and diet.	
Course contents: 1. Nutrition science in historical context. Basic principles of nutrition evaluation and nutritional (eating) disorders. 2. Nutrition assessment. Nutrient metabolism. Metabolism of vitamins, minerals and water. 3. Regulation of metabolism. 4. Basic nutritional (eating) disorders and its treatment. 5. Examination methods in nutritional (eating) disorders. 6. Principles of rational (healthy) nutrition amongst various age groups. 7. Nutrition and psychical and physical activity. 8. Diet therapy and dietary system. 9. Medical nutrition in various diseases. 10. Enteral nutrition. Parenteral nutrition. Combined enteral and parenteral nutrition in selected diseases.	

11. Treatment of disorders (disturbance) in water and mineral metabolism. 12. Alternative means of nutrition.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F1080W/22	Course title: Seminar to Final Thesis 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Active participation in exercises. The student takes control tests during the semester. The test will focus on the issues that were covered in the last exercises. To successfully pass the control test, it is necessary for the student to achieve a minimum of 6 points from a maximum of 10 points. The result of the control test will be announced to the student after the end of the exercises or one day before the start of next exercises. If the student gets less than 6 points, he/she is evaluated Fx. If a student obtains two times Fx from control tests during the semester, he/she will not be admitted to the final exam due to the theoretical failure of the subject. The results of control tests will be part of the final overall evaluation of the student. During the semester, each student prepares a semester work on a predetermined topic, which he is obliged to submit according to the instructions of the teacher. After the end of the semester and the fulfillment of all conditions given by the teacher, each student passes a final written examination, which is aimed to verify the theoretical knowledge acquired during the semester. To successfully complete the final written examination, the student must obtain at least 80% of points. The overall evaluation of the student will consist of the evaluation of control tests, evaluation of the semester work, evaluation of the final written examination and evaluation of the activity in the exercises. The teacher has the right to change the written examination to oral, which he must inform in advance. The student has the right to correction term in accordance with the study regulations of Faculty of Health, CU Ružomberok.
