COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2019W/22	Course title: Alternative Therapeutical Procedures
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 2.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the possibilities of alternative therapeutic procedures and manual treatment. • Skills: masters manual therapy and can assess joint blockade, masters the use of alternative procedures in practice. • Competences: can distinguish forms of alternative procedures and manual therapy, can evaluate the use of alternative procedures in treatment as well as the use of manual therapy in joint blockade. 	
Course contents: History and importance of acupuncture and acupressure. Acupuncture and related fields - Su - jok, electropuncture according to Voll, Dry Needle. Ryodorak method. Mechanism of action of acupuncture and acupressure. Points with total effect points agree, points alarm. Acupuncture tracks. Selection of suitable points for acupressure. Aromatherapy, treatment with color, crystals. Manual therapy - joint functional blockade and its consequences. Mechanism and causes of blockages. Mobilization and manipulation, indications and contraindications. Mobilization techniques in the area of C, Th and L spine, SI joint and in the area of peripheral joints.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2039W/22	Course title: Clinical Practice 3
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: hours per semester: 192s Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: II.	
Prerequisites: KFYZIO/54F2024W/22	
Requirements for passing the course: final evaluation: practical exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the basics of exercise programs in physiotherapy practice, has knowledge of basic methods of diagnosis and procedures of movement therapy • Skills: can apply physiotherapeutic procedures in natural conditions, apply a medical rehabilitation plan and use professional communication with the client, shows assertive and empathetic behavior. • Competences: applies the acquired skills about exercise programs in physiotherapy practice, gains erudition in compiling a plan for medical rehabilitation and the use of professional communication. 	
Course contents: Course contents: <ol style="list-style-type: none"> 1. Fundamental neurological examination. 2. Kinesiological analysis. 3. Examination of joint function. 4. Methodology of Vojta reflexive exercise. 5. Principles of Bobath's approach. 6. Physiotherapeutic methods and procedures in patients with CNS problems. 7. Physiotherapeutic methods and procedures in patients with PNS problems. 8. Physiotherapeutic methods and procedures in degenerative and functional disorders of the musculoskeletal system.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2027W/22	Course title: Differential Diagnostics of Functional Disorders
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 2.	
Level of study: II.	
Prerequisites: KFYZIO/54F2005W/22	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the dynamics of momentum development related to the gradual maturation of the CNS, distinguishes individual motor skills. • Skills: can perform kinesiological analysis and assess the degree of impairment of voluntary movement and is familiar with the development of motor skills. • Competences: can evaluate motor skills from developmental kinesiology and determine pathological patterns of movement. 	
Course contents: Prenatal effect on motor skills. Childbirth and its influence on the movement behavior of the baby. Movement skills in the field of developmental kinesiology - postural activity, reactivity, primitive reflexology. Movement differentiation in individual trimenones. Psychomotor development in children 2-6 years. Facilitation-inhibition techniques. Handling with the child and its effect on the locomotor system. Central coordination disorder. Cerebral palsy. Control of movement by the central and peripheral nervous system. Pathological patterns of movements. Development and diagnostics of power and speed abilities. Development of coordination skills. Fine motor skills. The most used tests for motor skills. Movement abilities in case of loss of individual movement functions. Physical abilities in individual sports.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F23S/22	Course title: Diploma Thesis Defense
Type and range of planned learning activities and teaching methods: Form of instruction: Recommended study range: hours weekly: hours per semester: Teaching method: on-site	
Credits: 10	Working load: 250 hours
Recommended semester/trimester: 3., 4..	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the course: During semester: Student will prepare a diploma thesis in cooperation with the thesis supervisor according to the Directive of the Rector of KU in Ružomberok no. 4/2011 on the requisites of final, rigorous and habilitation theses, their bibliographic registration, originality control, storage and access concerning copyright and is responsible for the originality of the thesis. Student submits the completed final thesis in electronic form through the academic information system and in a printed version with a specified copies number, fills in its analytical sheet and submits the signed license agreement in two copies to the student affairs department. Final evaluation: It considers the evaluation of the final thesis supervisor and opponent, the originality control protocol, and the final thesis defense in front of the state exam committee.	
Learning outcomes of the course: Learning outcomes Course objective: To adopt the theoretical and practical knowledge of the problem within the physiotherapy sphere. Theoretical knowledge: Capacity to work with the domestic and foreign references, selection of essential information for the diploma thesis topic, data collection ability, interpretation and processing of the references Practical skills: Formally process the assigned topic and present it.	
Course contents: Course contents: Defined within the following course information sheets: Final thesis seminar 1,2,3

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2001W/22	Course title: Human Biomechanics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 3 hours per semester: 36 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 1.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: inal evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self -study 40 hours	
Learning outcomes of the course: self-study: 20 hours <ul style="list-style-type: none"> • Knowledge: knows the essence of the biomechanics of the locomotor system, has knowledge of repositioning systems and locomotor chains. • Skills: masters the biomechanics of individual parts of the human body, recognizes reduction systems, applies open and closed chain methods. • Competences: can analyze the musculoskeletal system from a biomechanical point of view, can determine reduction systems with impaired locomotor function, controls the methodologies of open and closed locomotor chain. 	
Course contents: Introduction to biomechanics, characteristics, human locomotor system. Biomechanical properties of soft tissues. Biomechanical properties of hard tissues. Joint biomechanics. Biomechanics of the spine. Chest biomechanics. Biomechanics of respiration. Biomechanics of the upper limbs. Biomechanics of the lower limbs. Osteosynthetic apparatus. Repositioning systems. Open and closed string.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2002W/22	Course title: Internal Medicine
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 0 hours per semester: 24 / 0 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 1.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions	
Learning outcomes of the course: Knowledge: Introduction to the basic physiological functions of individual organ systems of the human body. Understanding the organism as a dynamic whole, the importance of homeostasis of the internal environment for the activity of organs and its stability. Changes in the body during movement and physical exercise. • Skills: The student masters professional terminology, defines the basic physiological principles of homeostasis of the internal environment of the organism. It describes the physiological activity of organ systems, illustrates the nature of individual physiological processes. It defines the basic differences between non-specific and specific immunity, between enzyme and hormone, between the autonomic and somatic nervous systems and the like. Can interpret physiological changes at work and exercise. • Competences: The student demonstrates the application of theoretical knowledge to clinical practice. He orients himself in incorporating his theoretical knowledge into individual clinical disciplines, such as measuring blood pressure, evaluating heart activity according to heart sounds, knowing the basic parts of the ECG curve and functional examination of respiratory volume. He knows the basic principles of examination of urine and kidney function, examination of blood elements, blood transfusions, the importance of examination of enzymes, hormones, differences between active and passive immunization, principles of proper nutrition, the effect of stress on the body, etc.	
Course contents: Internal Medicine-Rheumatology: Course Characteristics. The main symptoms of internal diseases and diseases of the musculoskeletal system. Examination methods used in rheumatology. General principles of treatment in rheumatology. Rheumatoid arthritis; Rheumatic fever; Systemic Lupus Erythematoses; Spondyloarthritis; Metabolic diseases with joint involvement; Osteoporosis; Osteoarthritis; Spondylosis and spondylarthrosis; Rheumatic	

syndromes; Neurovascular syndromes; Periarthritis; Muscle pain syndrome; Entezopathy; Psychogenic rheumatic syndrome.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F24S/22	Course title: Kinesiology and Pathokinesiology
Type and range of planned learning activities and teaching methods: Form of instruction: Recommended study range: hours weekly: hours per semester: Teaching method: on-site	
Credits: 5	Working load: 125 hours
Recommended semester/trimester: 3., 4..	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the course: The student has successfully completed all study requirements for the master's program in physiotherapy (successfully completed the study program's compulsory and optional courses, according to the student's decision following structure determined by the study program) and obtained designated 98 credits. The student registers for the state exam via the academic information system and submits a signed application for the state exam. Final evaluation: oral examination with state exam committee presence.	
Learning outcomes of the course: Learning outcomes Course objective: The student will demonstrate his professional expertise in kinesiotherapy procedures according to the evaluation of the patient's condition and the preparation of a medical rehabilitation and kinesiotherapy plan for particular indication areas of medicine. Theoretical knowledge: The student will demonstrate professional knowledge of physiotherapeutic procedures in medicine's clinical areas, which he acquired during the bachelor's study. Practical skills: The student provides physiotherapeutic care applying the method of medical rehabilitation plan and independently performs physiotherapeutic services based on a doctor's prescription in accordance with legal regulations, within the scope of studies, and professional practice acquired and within standards and medical diagnosis (if a person needs medical care).	
Course contents: Course contents: Defined within the following courses' information sheets: Physiotherapy Diagnostics 1-5, Kinesiotherapy Methods 1-5, Kinesiology and Pathokinesiology 1-2.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2005W/22	Course title: Kinesiology and Pathokinesiology 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 3 hours per semester: 36 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 1.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: 20 hours self-study final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study: 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the basics of motor ontogenesis, understands the dynamics of momentum development related to the gradual maturation of the CNS, knows the development of gross and fine motor skills and posture and their specifics from birth to adulthood. • Skills: can recognize postural and motor disorders of children and the adult population. Can design adequate treatment in the detection of motor and postural abnormalities. Can assess the degree of damage to the will. He is familiar with the issue of infantile cerebral palsy. • Competences: has the ability to analyze and synthesize in the kinesiological analysis and evaluation of the neuromuscular system, based on the principles of ontogenesis and the development of human motor skills, 	
Course contents: Prenatal effect on motor skills: genetic factors, gestational period, fetal motor skills, interactions of CNS maturation and fetal (child) movement manifestations. 2. Childbirth and its effect on motor skills. 3. Sensory and primitive reflexology. 4. Postural ontogenesis of a healthy and handicapped child up to the first year after birth (erection mechanisms up to bipedal locomotion). 5. Differentiated muscle functions during development, grip development and motor system of intentional movement. Central coordination disorders pathological CNS disorders. 7. Tests determining the degree of development in individual trimesters and relative retardation. 8. Normal and pathological development of a child under 3 and up to 6 years. 9. Clinical diagnosis of the degree of developmental disorder, determination of the prognosis of the detected disorder. 10. Child manipulation, sensorimotor stimulation. 11. Facilitation-inhibition techniques, aids. 12. Instruction and information of parents for the appropriate procedure for a disabled and healthy child - prevention of the consequences of incorrect physical education

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2015W/22	Course title: Kinesiology and Pathokinesiology 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 3 hours per semester: 36 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 2.	
Level of study: II.	
Prerequisites: KFYZIO/54F2005W/22	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. 40 hours of self-study	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: Has a broad knowledge of the anatomy and physiology of the musculoskeletal system, including knowledge of the kinesiology of the musculoskeletal system. He knows the relationships between kinanthropology and biomechanics in relation to movement. He has adequate knowledge of the basic pathomorphological and pathophysiological manifestations of the musculoskeletal system and their therapy. • Skills: can integrate and use the acquired knowledge of kinesiology in the kinesiological analysis of musculoskeletal disorders and prototyping activities and use them in the creation of physiotherapeutic procedures in individual clinical disciplines. • Competences: masters a wide range of kinesiological analysis and uses in functional diagnostics of the locomotor system. He is capable of analysis and synthesis in kinesiological analysis and evaluation of the neuromuscular system. Masters a wide range of methods and techniques of kinesiotherapy and manual therapy and is able to apply them in the process of physiotherapeutic care in various medical disciplines 	
Course contents: Kinesiology of prototyping activities. Characteristics of basic postural activities under physiological conditions, possible manifestations of pathology. Postural and locomotor (gross) motor skills. Kinesiology and pathokinesiology HSSCH. Kinesiology pathokinesiology of the cervical spine - upper and lower section. Kinesiology pathokinesiology of the torso. Kinesiology pathokinesiology of the chest and respiration. Kinesiology pathokinesiology of the limb girdle. Kinesiology pathokinesiology of the lower limb.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2004W/22	Course title: Neurology 1
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 2 hours per semester: 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Prerequisites and co-requisites: During the semester, active participation in lectures and seminars, passing a continuous written test, preparation of a presentation on a given topic. During the semester there will be a written examination, for which it is possible to obtain a maximum of 13 points. To participate in the final exam, it is necessary to obtain at least 6 points from the examinations. At the final exam, the student can get max. 13 points. The final evaluation will be based on the points obtained from the examination during the semester and from the final test. Self-study: 20 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the neurological examination of motor function, get acquainted with the examination of gait, focus on gait parameters, examination of sensitive and motor functions, peripheral and motor disorders • Skills: can apply examination procedures of sensitive and locomotor function. • Competences: can increase the effectiveness of basic examination procedures of sensitive and locomotor function. 	
Course contents: Course contents: <ol style="list-style-type: none"> 1. Neurological disorders of movement and gait. 2. Fundamental knowledge of elementary sensory functions examination. 3. Fundamental knowledge of elementary motor functions examination. 4. Comprehensive examination of peripheral motor disorders. 5. Comprehensive examination of central motor disorders. 6. Gait examination, robotic rehabilitation applications in gait rehabilitation. 7. Objectification of examinations. 8. Diagnostic conclusions for differential diagnostics and therapy. 9. Neurorehabilitation - basics

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2028W/22	Course title: Occupational Therapy
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 12 / 12 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: • final evaluation: oral exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions.	
Learning outcomes of the course: Knowledge: knows the position of occupational therapy in the overall treatment program. He has an overview of occupational therapy procedures for selected diagnoses and skill in basic methods of occupational therapy • Skills: can apply adequate occupational therapy activity. Implements training in routine activities with the patient. Applies ergodiagnostic tests, creates an occupational therapy program, creates a suitable program for retraining and resocialization of the patient • Competences: can design barrier-free living conditions for the patient, can evaluate the safety standards of aids and the safety of sheltered workshops.	
Course contents: 1. Basic concepts and history of occupational therapy. 2. Objectives, tasks, methods and classification of occupational therapy. 3. Therapeutic education for independence. Practical mastery of the compensating aid. Practical training of common daily activities. 4. Treatment by employment and elements of therapy by work activities in medical rehabilitation. 5. Working with paper, textiles and natural materials. 6. Methodical procedures of occupational therapy for individual diseases (neurology) 7. Methodical procedures of occupational therapy for individual diseases (traumatology) 8. Methodical procedures of occupational therapy for individual diseases (orthopedics, surgery) 9. Methodical procedures of occupational therapy for individual diseases (pediatrics) 10. Basic examination and development of therapeutic occupational therapeutic program. 11. Ergodiagnosics - tests usable in physiotherapy: Barthel's index, ADL, ASIA test, Brunnstrom's test, self-service test, communication skills. 12. Patient Rating Scale (Kurt Scale for Multiple Sclerosis)

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2036W/22	Course title: Pharmacology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: záverečné hodnotenie: písomná skúška (0 - 100) Počet bodov získaný za záverečné hodnotenie je 100. Zodpovedá klasifikačnej stupnici hodnotenia. Kredity sa pridelia študentovi, ktorý získal z predmetu za plnenie určených podmienok minimálne 60 zo 100 bodov. Samoštúdium: 20 hodín final evaluation: written exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study: 20 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: recognizes the stages of lymphedema and method of treatment, has knowledge of anti-edematous positioning and gymnastics, tactile lymphatic drainage, has knowledge of pharmacological tasks, mechanism of action of drugs, pharmacokinetics and pharmacodynamics of drugs, their absorption, transport, biotransformations, interactions and excretions, interactions, NUL, types of treatment, placebo therapy, research of new drugs, forms of drugs • Skills: can apply basic knowledge about lymphedema treatment, has manual lymphatic drainage skills, can apply lymphomassage kits, bandage limbs, implement anti-edematous gymnastics, know the principles of handling and administration of drugs in pharmacology. • Competences: recognizes the stages of lymphedema and the method of treatment, defines primary and secondary lymphedema, performs anti-edematous positioning and gymnastics, lymphatic drainage. controls the systematization of pharmacotherapeutic groups as well as their profile 	
Course contents: Lymphedema therapy Anatomy of the lymphatic system. 2. Lymphedema and its stages. 3. Treatment of lymphedema. 4. Manual lymphatic drainage - theoretical foundations. 5. Manual lymphatic drainage of the upper and lower limbs. 6. Manual lymphatic drainage of the chest. 7. Manual lymphatic drainage of the back. 8. Manual lymphatic drainage of LS area. 9. Manual lymphatic drainage - neck front and back. 10. Manual lymphatic drainage of the face. Pharmacology	

Drug interactions, pharmacokinetics, pharmacodynamics, agonism, antagonism, placebo therapy. Basic terminology in pharmacology, routes of drug administration, drug dosing. Pharmacology of the nervous and circulatory system. Pharmacology of the respiratory system. Pharmacology of the digestive system. Pharmacology of enzymes and vitamins. Pharmacology of antibiotics and chemotherapeutics.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2031W/22	Course title: Physical Education and Sport of the Handicapped
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: final evaluation: written exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. Self-study: 20 hours	
Learning outcomes of the course: Knowledge: has knowledge of the optimal development of motor skills, understands the dynamics of momentum development associated with the gradual maturation of the CNS and proves that developmental kinesiology focused mainly on the period from 12 to 18 months of age is a significant contribution to the study of movement and therapy of movement disorders. • Skills: can perform kinesiological analysis and assess the degree of impairment of free movement. • Competences: can assess the degree of damage to the will, is familiar with the issue of infantile cerebral palsy.	
Course contents: Introduction to the issue and the importance of physical education and sports for the disabled. Basic terminology. Definition and distribution of disabilities. History of physical education and sports for the disabled. National and international organizations uniting disabled athletes and professionals working in the field. Overview of sports performed. Social aspects of disability and application of physical activities. Psychological approaches - motivation, adherence, evaluation. Communication with disabled people. Testing and exercise regime of the disabled. The issue of classification in elite sports. Issues of integration, management of sports and recreational activities for the disabled. Selected summer and winter sports for the disabled (rules, adaptations, classifications). Sports for the visually and hearing impaired, sports for the prosocially handicapped, sports for the internally handicapped, sports for the physically handicapped - biomedical characteristics (causes, consequences, divisions, specifics), possibilities, indications and contraindications of physical activities. Special aids. Practical examples of activities for the disabled.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F22S/22	Course title: Physiotherapy in Selected Clinical Fields
Type and range of planned learning activities and teaching methods: Form of instruction: Recommended study range: hours weekly: hours per semester: Teaching method: on-site	
Credits: 5	Working load: 125 hours
Recommended semester/trimester: 3., 4..	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: Conditions for completing the course: The student has successfully completed all study requirements for the master's program in physiotherapy (successfully completed the study program's compulsory and optional courses, according to the student's decision following structure determined by the study program) and obtained designated 98 credits. The student registers for the state exam via the academic information system and submits a signed application for the state exam. Final evaluation: oral examination with state exam committee presence.	
Learning outcomes of the course: Learning outcomes Course objective: The student will demonstrate professional expertise in kinesiotherapy procedures according to the evaluation of the patient's condition and the preparation of a medical rehabilitation and kinesiotherapy plan for particular indication areas of medicine. Theoretical knowledge: The student will demonstrate professional knowledge of physiotherapeutic procedures in medicine's clinical areas, which he acquired during the bachelor's study. Practical skills: The student provides physiotherapeutic care applying the method of medical rehabilitation plan and independently performs physiotherapeutic services based on a doctor's prescription in accordance with legal regulations, within the scope of studies, and professional practice acquired and within standards and medical diagnosis (if a person needs medical care).	
Course contents: Course contents: Defined within the following courses' information sheets: Physiotherapy Diagnostics 1-5, Kinesiotherapy Methods 1-5, Kinesiology and Pathokinesiology 1-2.

Faculty: Faculty of Health	
Course code: KFYZIO/54F2042W/22	Course title: Psychiatry
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 12 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: During the semester: participation in lectures in the absence of more than 7 lectures elaboration of a seminar work according to the instructions of the teacher. Final evaluation: oral exam, or. written method according to the teacher's instructions.	
Learning outcomes of the course: Learning outcomes: Course objective: The aim of the course is to provide basic information in the field of psychiatry with a focus on physiotherapy. Theoretical knowledge: The student should be able to identify an acute condition in psychiatry, master the basic psychopathological symptoms, distinguish the main groups of mental disorders - the difference between neurotic, psychotic condition, withdrawal symptoms in addictions, manifestations of organicity. The student has the theoretical knowledge of psychiatry necessary for their application in physiotherapeutic practice. Practical skills: The student uses theoretical knowledge in the practical activities of physiotherapeutic practice.	
Course contents: Course contents: 1. Introduction to the issue. 2. Causes of mental disorders, possibilities of prevention 3. Basic psychopathological symptoms I. 4. Basic psychopathological symptoms II. 5. Organic mental disorders. 6. Schizophrenia, delusional disorders. 7. Affective disorders. 8. Problems of ethylism and drug addiction. 9. Psychogenic and neurotic mental disorders. 10. Personality disorders, Impulse disorders, disorders in the postpartum period. 11. Some legal and ethical issues in psychiatry.	

12. Urgent psychiatry, problems of suicidality, contact of a physiotherapist with a psychiatric patient.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Health	
Course code: KFYZIO/54F2003W/22	Course title: Reasearch in Health Care
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 24 / 24 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 1.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: final evaluation: oral and written exam (0 - 100) The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who has obtained at least 60 out of 100 points from the course for meeting the specified conditions. During the semester: continuous written examination, from which it is necessary to obtain 60% of points. Final assessment: will be based on a successful written examination and an oral exam. Self-study: 40 hours	
Learning outcomes of the course: <ul style="list-style-type: none"> • Knowledge: knows the essence of research - scientific, clinical, knows how to work with literature, knows the difference between qualitative and quantitative research, masters the stages of the research process; knows the basics of probability theory, knows the procedures of the most used methods of hypothesis testing and estimation of statistical parameters. • Skills: practical manages the methodology of research work, can formulate research problems, goals, set hypotheses, prepare research strategy and its implementation, publish and present research results. • Competences: can work independently with statistical literature, perform exploratory analysis and implement methods using statistical software. 	
Course contents: 1. Hypotheses. 2. Dependent and independent variables. 3. Method and characteristics of selection 4. Research methods 5. Validity and reliability of the measuring tool. 6. Data processing 7. Experiment 8. Structure of scientific research 9. Sources of data acquisition 10. Citation methods. 1. Basic file, random selection, selection range, types of measured characters. 2. Graphs of data representation, histogram, cluster graph, box-graph. 3. Characteristic positions, scatterings and associations of a quantitative feature. 4. Description of the contingency table, different ways of expression. 5. Random variable - generalization of character measurement variability in a given population. 6. The difference between theoretical and empirical characteristics, the difference in the designation of parameters. 7. Normal distribution, calculation using the tables of the distribution function of the normal distribution. 8. Basic table of decisions in the statistical test, error I. and II.	

Kind, level of significance. 9. Test of averages, probabilities and dependencies, estimates. 10. Point and interval estimation, estimation properties, robustness.
