COURSE INFORMATION SHEET

| | |
|---|---|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD103A/22 | Course title: Concurrent Teaching Practice 1 |
| Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site | |
| Credits: 1 | Working load: 25 hours |
| Recommended semester/trimester: 1. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Verification of the level of acquired knowledge, skills and competences is carried out by the practice methodology based on the assessment of the student by the trainee teacher and the evaluation of the submitted pedagogic diary. The preparation of pedagogic diaries, analysis of lessons with a practicing teacher, and independent outputs in elementary or secondary school are evaluated. - 1 listening session (teacher), 6 listening sessions (students), 3 outputs, 8 hours of discussions with a training teacher. Subject evaluation: A – 100%-93%, B – 92%-85%, C – 84%-77%, D – 76%-69%, E – 68%-60%, Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - is able to observe, analyze and record in hospital records and pedagogical diaries the pedagogical and psychological aspects of the educational process, - is able to navigate the generally binding legal, ethical, economic regulations relating to the work of a teacher, in the pedagogical documentation, in other conceptual and strategic documents of the school, - controls the creation of methodological materials with wider applicability in connection with practice through e-learning or multimedia aspects, - is able to cooperate in solving professional projects in the field of geography and didactics, - he is able to carry out research into pedagogical phenomena, formulate research conclusions and present his results externally. | |
| Course contents: 1. The student will take part in 1 lesson in geography led by a practicing teacher at the selected primary or secondary school. 2. The student will attend 6 lessons taught by his classmates. 3. The student himself prepares and conducts 3 lessons. 4. Together with the teacher, the student will analyze the given lessons (8 lessons). | |

5. The student submits a pedagogical diary processed according to the requirements of the trainee teacher and the practice methodology.

|---|---|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD113A/22 | Course title: Continuous Teaching Practice |
| Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 2 hours per semester: 26 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 3. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Verification of the level of acquired knowledge, skills and competences is carried out by the practice methodology practice methodology based on the assessment of the student by the trainee teacher and the evaluation of the submitted pedagogical journal. The preparation of pedagogic diaries, analysis of lessons with a practicing teacher, and independent outputs in elementary or secondary school are evaluated. 1 audition, 19 outputs, 10 hours of analysis with a practice teacher. | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: <ul style="list-style-type: none"> - is able to independently make written preparation for the lesson and lead it independently, - is able to navigate the generally binding legal, ethical, economic regulations relating to the work of a teacher, in the pedagogical documentation, in other conceptual and strategic documents of the school, - controls the creation of methodological materials with wider applicability in connection with practice through e-learning or multimedia aspects, - is able to cooperate in solving professional projects in the field of geography and didactics, - he is able to carry out research into pedagogical phenomena, formulate research conclusions and present his results externally. | |
| Course contents: <ol style="list-style-type: none"> 1. The student is obliged to develop a personal internship plan and submit it to the supervisor. 2. The student will participate in 1 lesson in geography led by a practicing teacher at a selected primary or secondary school. 3. The student must have prepared a written project for each taught lesson before his/her own output. The written project (its structure) meets the requirements: it contains a clearly formulated and student-oriented cognitive and affective learning goal defined by the curriculum, activities and learning requirements in the direction of the development of specific knowledge and skills, controllable (measurable), expressed in terms of student performance. | |

4. After his own outputs, he will analyze his lessons with the trainee teacher and process them in a pedagogical diary.
5. For the evaluation, it is necessary to submit a pedagogical diary for review, which contains: analysis from 1 hearing with the trainee teacher and own preparations for 19 hours, notes from the analyzes and self-reflection of lessons learned, evaluations of the trainee teacher from individual lessons.

COURSE INFORMATION SHEET

| | |
|--|--|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD107A/22 | Course title: Field Course in the Geography of Slovakia |
| Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 3 hours per semester: 39 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 2. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: During the semester, there will be preparation for the field course, which will usually take place at the end of the semester in a six-day block. The overall evaluation will consist of the following partial evaluations: 1. active participation; 2. a report on a given topic submitted at the beginning of the field course and its presentation during the field course; 3. oral answers to questions from the assigned topic and from the curriculum covered during the field course; 4. own notes documenting in detail the interpretation from the entire field course, especially from the individual locations visited; 5. own share in the creation of a joint student website documenting the field course (including an interactive internet map) Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx –59%- 0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - can present knowledge about the complex geographical characteristics of Slovakia directly in the field, - through direct field observation and the use of a map, he is able to apply theoretical knowledge from the regional geography of Slovakia in the selected area, - can practically use basic methods for collecting and processing data on natural and social objects, phenomena and processes in the country and for preparing textual, tabular, graphic and cartographic outputs, - is able to prepare and successfully implement a geographical excursion. | |
| Course contents: 1. Preparation of the geographical excursion: Selection, preparation and preliminary documentation of the content and route of the excursion. | |

2. Efficiency and safety when traveling and moving in the field.
3. Overview of basic methods of obtaining information about objects, phenomena and processes of the physical-geographical and human-geographical sphere during preparation for field observation and mapping, during their actual implementation and information processing methods after the end of their actual implementation in the field.
4. Obtaining data and information from various sources (including maps).
5. Comparison and validation of data and information with objective reality in the field.
6. Examination of the components of the physical-geographical and human-geographical spheres in the selected territory, their analysis and subsequent synthesis.
7. Geographic observation.
8. Distinguishing vertical and horizontal relations in the country directly in the field, examining the mutual conditionality of the components of the physical-geographical and human-geographical spheres.
9. Demonstrations and practical practice of physical-geographical regionalization methods.
10. Demonstrations and practical practice of human geographic regionalization methods.
11. Demonstrations and practical practice of methods of complex geographic regionalization.
12. Processing (sorting, analysis and synthesis) of collected data.
13. Final documentation and presentation of the field course content and route.

COURSE INFORMATION SHEET

| | |
|---|---------------------------------|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD109A/22 | Course title: Geoecology |
| Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 13 / 13 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 3. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Verification of the degree of acquisition of relevant knowledge, skills and competencies of the student is carried out based on the evaluation of the student's ongoing tasks during the semester and on the basis of the evaluation of the written test and the final oral exam. During the semester, active participation in seminars is required in the form of preparation and presentation of seminar exercises on assigned topics. At the end of the semester, the student proves his theoretical knowledge first in the form of a written test. In order to participate in the final oral exam, it is necessary to obtain at least 60% of the points from the test. Subject evaluation: A – 100%-93%, B – 92%-85%, C – 84%-77%, D – 76%-69%, E – 68%-60%, Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - The student will master the basic knowledge of geoecology (complex physical geography, landscape science), understand the systemic approach to exploring the landscape (geographical) sphere and environmental applications of knowledge about the landscape. - Has basic knowledge about landscape complexes, their spatial structure, temporal and spatiotemporal changes. - Understands the laws of spatial differentiation of the landscape sphere, the content and forms of physical-geographical regionalization, the spatial structure of the cultural landscape and the stages of its transformation, as well as the essence and purpose of landscape synthesis. - Can assess the appropriateness of land use and propose a basic solution to negative anthropogenic interventions in the land. - He can apply the acquired knowledge in a specific area and when teaching geography at primary and secondary schools. | |
| Course contents: 1. Geoecology (complex physical geography, landscape science) – object and subject, position in the system of geographical sciences. Land sphere and landscape. 2. Physical-geographical complex, research models, geosystemic and ecosystem approach to the study of landscape systems. 3. Types of physical-geographical complexes. 4. Geographical dimensions of physical-geographical complexes – topical, choric, regional, continental and planetary units. 5. Paradyamic complexes and catenas. 6. Morphological structure of the physical-geographic landscape. 7. Temporal and spatiotemporal changes of physical-geographical complexes. 8. Laws of spatial differentiation of the physical-geographic sphere (planetary zonality, own horizontal zonality, foothill zonality, | |

altitude zonality, azonality). 9. Basics of physical-geographical regionalization and regional taxonomy. 10. Cultural landscape and its spatial structure. 11. Geotechnical systems in the country. 12. Negative anthropogenic interventions in the country and degrees of its transformation. 13. Landscape synthesis and rational use of the landscape.

|---|---|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD100S/22 | Course title: Geography with Didactics |
| Type and range of planned learning activities and teaching methods: Form of instruction: Recommended study range: hours weekly: hours per semester: Teaching method: on-site | |
| Credits: 8 | Working load: 200 hours |
| Recommended semester/trimester: 3., 4.. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: The state exam can be taken by a student who has fulfilled the obligations set by the accredited study program and the Study Regulations of the University of Ružomberok during the examination of the studies completed in the last year of study. The state exam has the character of a colloquium. The grade will be included in the overall evaluation of the state exam. | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: <ul style="list-style-type: none"> - can integrate knowledge from different geographical disciplines in terms of regional geography. - he has relevant knowledge of the regional geography of Slovakia and the regional geography of the world parts. - has basic knowledge of geoecology (complex physical geography, landscape science), understands the systemic approach of researching the landscape (geographical) sphere and environmental applications of knowledge about the landscape. - can assess the appropriateness of land use and propose a basic solution to negative anthropogenic interventions in the land. - he can apply the acquired knowledge from individual areas of geography in the position of a travel agency worker. - he masters the methodology, gnoseology and principles of pedagogical diagnosis of the educational process in geography, with respect for the individual characteristics of pupils and students. - is able to independently plan, organize, lead and analyze the educational process at ISCED 2 and 3 levels in profile educational areas and specializations. - possesses professional competences for effective work in the social-scientific, professional-subject, information-communication technology, academic and managerial context of teaching. | |
| Course contents: Updated theses for the colloquial exam are published on the faculty's website no later than the beginning of the summer semester in the given academic year. | |
| Recommended or required literature: According to the literature of the compulsory subjects of the given study program. | |

COURSE INFORMATION SHEET

| | |
|--|--|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD108B/22 | Course title: Geoparks and Geotourism |
| Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 3. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Students will be guided to activities in environmental tourism, in the identification of geologically and geomorphologically significant sites, outdoor teaching, experiential education of students on educational trails and in geoparks, perception of the scientific and aesthetic value of natural monuments, use of museum collection funds and in getting to know technical and historical monuments connected with mining activity of Slovakia (mountain tourism). In the form of seminar work, students will gain practical knowledge about the methodology of preparation and design of educational trails in the selected region of Slovakia. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - The student will gain knowledge about the most interesting natural monuments, localities ("geosites"), educational routes, geoparks, thematic museums and geotourism in the regions of Slovakia. - Uses acquired natural science knowledge for educational training within the concept of the so-called "green tourism", cultural-environmental tourism, mountain tourism and geopropagation of Slovakia's natural values. - In addition to regional knowledge of geotourism, the student will also gain legislative, methodological and logistical experience from the description of educational routes, the operation of existing geoparks, and their sustainability within the European and global network of UNESCO geoparks. | |
| Course contents: | |

1. Geotourism as a learning practice of geological objects and landscape-forming processes with an emphasis on their educational, aesthetic and montanistic value of the landscape.
2. Definition of a geopark as an area of scientific and cognitive value of the country.
3. Geomontane parks of Slovakia - characteristics, description and locations of the Banská Štiavnica and Banská Bystrica geoparks.
4. Novohrad geopark (volcanic landscape) - characteristics, description and localities
5. Sandberg-Pajštún and Malé Karpaty Mts. geoparks - characteristics, description and localities.
6. Educational geological maps of the Cerova Highlands, Tatras, Vihorlat and Zemplín hills - map forms of educational locations, information, use in education
7. Educational trails, purpose and concept of information panels, polythematic focus.
8. Database of nature trails in Slovakia (regional overview of 600 nature trails).
9. Educational trails of the Slovak mining route and historical mining towns of Slovakia (e.g. Dubník, Staré Hory, Ľubietová, Kremnica, Gelnica, etc.)
10. Activities of state and self-governing establishments, civic associations, mining associations and other educational trail organizers.
11. Importance of geoparks for local territorial and economic development of regions
12. UNESCO strategy for building a network of geoparks as geological heritage of the Earth
13. Application of geoparks in the teaching of natural science subjects.

COURSE INFORMATION SHEET

| | |
|---|--|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD112A/22 | Course title: Global Environmental Problems |
| Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 13 / 13 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 4. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Completing the course requires a comprehensive approach to the processes of global environmental threats on Earth. The student will understand the synergistic effect of abiotic, biotic, climatic and social factors on the state of the global environment. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - The student can identify global threats, knows long-term forecasts of climate development (greenhouse effect, ozone layer), shifting of bioclimatic zones, sufficiency of food, raw materials and energy sources. - Responds positively to the needs of the "green" economy, waste minimization, access to drinking water, reduction of industrial emissions, obtaining energy from renewable sources, and other issues of environmental sustainability on Earth. - He is aware of the risks of harming health by emissions and chemical pollution (acid rain), soil degradation, and other harmful effects caused by man. - The student will understand that society expects the necessity of changing environmental behavior at all levels of management and environmental policy of the Slovak Republic and the EU. | |
| Course contents: 1. Globalization of the world and the resulting global problems of humanity. 2. Global changes as a result of global environmental, economic, political and security processes. 3. Global climate changes, warming of the atmosphere due to emissions, the greenhouse effect, weakening of the ozone layer, acid rain, etc. 4. Lack of food (famines), lack of drinking water, pollution and contamination of groundwater, erosion, desertification and loss of soil fertility, etc. 5. Natural disasters, earthquakes, volcanism, hurricanes, rise in the world ocean level, coastal flooding, ocean acidification, changes in the thermo-haline system of ocean circulation, and i. 6. Global threats to the biosphere, including the loss of biodiversity, the decline of forest ecosystems, the spread of alien species. | |

7. Increasing urbanization, population growth and overcrowding, lack of raw materials, widening gap between rich and poor
8. Diseases, epidemics and pandemics
9. Accumulation of radioactive and other waste from industrial production.
10. Socio-economic impacts of global changes, migration, stopping of economic growth, war conflicts, etc.
11. Manifestations of global changes in the current extremes of climate and environment in Slovakia, increase in average temperatures, weather disasters, reduction of water resources, impact on agricultural production, etc.
12. International programs in the fight against global changes and to ensure the sustainability of the environment, activities of non-governmental organizations, etc.
13. Global changes in the teaching of environmental geography.

COURSE INFORMATION SHEET

| | |
|---|--|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD106B/22 | Course title: Landscape and Sustainable Development |
| Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 3. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Verification of the degree of acquisition of relevant knowledge, skills and competencies of the student is carried out based on the evaluation of the student's ongoing tasks during the semester and on the basis of the evaluation of the written test and the final oral exam. During the semester, active participation in seminars is required in the form of preparation and presentation of seminar exercises on assigned topics. At the end of the semester, the student proves his theoretical knowledge first in the form of a written test. In order to participate in the final oral exam, it is necessary to obtain at least 60% of the points from the test. Subject evaluation: A – 100%-93%, B – 92%-85%, C – 84%-77%, D – 76%-69%, E – 68%-60%, Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - The student has basic knowledge about natural resources and ecosystem services in the country, vulnerability, carrying capacity (load capacity) and rational use of the country, as well as about sustainable development. - Can analyze and assess negative anthropogenic impacts on the landscape based on own observations, propose practical measures to eliminate them. - He can apply the acquired knowledge about natural resources, carrying capacity and the need for rational use and protection of the landscape in accordance with the principles of sustainable development when teaching geography at primary and secondary schools. | |
| Course contents: 1. Landscape, cultural landscape, sustainable development and its goals. 2. Biodiversity, ecosystem and ecosystem services. 3. Endangerment of biodiversity and ecosystems, ecological stability and carrying capacity of the landscape. 4. Problems of utilization and negative anthropogenic interventions in the landscape – urbanized landscape, agricultural landscape, uninhabited original or partially changed landscape. 5. Protection of nature, biodiversity and landscape. 6. Natural resources, creation of clean and renewable energy sources. 7. Ensuring favorable air quality. Climate change and its consequences on human society, ecosystems, plant and animal communities. 8. Water – an irreplaceable component of the environment and its pollution. 9. Soil - credit rating, anti-erosion measures and protection. 10. Circular economy and waste recycling. 11. Environmental loads. 12. Basic types and use of landscape in Slovakia – lowland landscape, basin landscape, | |

highland landscape, mountainous landscape, highland landscape, high mountain landscape. 13. Applied landscape ecological research, spatial planning and integrated landscape management.

COURSE INFORMATION SHEET

| | |
|---|--|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD102B/22 | Course title: Nature and Landscape Protection in Slovakia |
| Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site | |
| Credits: 1 | Working load: 25 hours |
| Recommended semester/trimester: 1. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: The student demonstrates his knowledge in the field of nature and landscape protection in Slovakia by preparing a presentation about the protected areas (in the system of national and international level) of the place and surroundings of the student's living place. Final assessment: total percentage gain from the assessment of the content and level of the presentation (80%) and its presenting (20%). Subject evaluation: A – 100%-93%, B – 92%-85%, C – 84%-77%, D – 76%-69%, E – 68%-60%, Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - knows the basic principles and reasons for nature and landscape protection, - understands the nature and landscape protection system in Slovakia, where the protected areas created by the legislation of the Slovak Republic and international conventions are intertwined, - identifies the components of nature and landscape protection in his surroundings and is able to use his knowledge in geographical education, or can propose solutions to the problems that have arisen. | |
| Course contents: 1. Nature and landscape protection: history of nature and landscape protection in the world and in Slovakia 2. National system of protected areas: large-scale and small-scale protected areas 3. National park 4. Protected landscape area 5. Nature reserve, Protected area 6. Natural monument, Protected landscape element 7. European system of protected areas Natura 2000: Special Area of Conservation 8. European system of protected areas Natura 2000: Special Protection Area 9. UNESCO Man and the Biosphere Programme (MaB) 10. UNESCO World Natural Heritage 11. Ramsar sites 12. Nature and landscape protection on the example of the Liptov region 13. Students' presentations | |

COURSE INFORMATION SHEET

| | |
|--|-------------------------------------|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD101B/22 | Course title: Paleogeography |
| Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 13 / 13 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 1. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: In order to pass the subject, one must master the thematic scope of paleogeography and prepare a semester paper. The overall evaluation consists of the assessment of the semester work (40%) and the final exam (60%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - The student understands the dynamics of changes in the paleogeographic picture and the development of the Earth - Gain knowledge about the expansion of land, mountains and oceans depending on the movements of the earth's crust, hydrographic and climatic conditions. - Uses paleogeographic maps to recognize spatial changes in the expansion of continents and oceans, straits and land bridges, ocean current systems, desertification of desert areas, etc. - Analyzes the historical record and interprets conditions in the Earth's geological past - Provides a compilation of the data from professional literature and internet sources for the preparation of a semestral work. | |
| Course contents: 1. Paleogeographic changes due to orogenetic and epeirogenetic movements, isostasy, glaciostasis, eustatic sea level movements, etc. 2. The oldest consolidated parts of the continents – continental shields, plates, cratons, platforms, epiplatforms, their geographical definition and geological structure. 3. The great bombardment of the Earth and the great impact events in the history of the Earth. | |

4. The snowball theory and the great glacial eras in the development of the Earth (the glaciation of Anktartida and the Arctic).
5. The first systems of Earth's continents – Rodinia and Panotia and the global proto-ocean superocean Mirovia.
6. The formation of Paleo-Europe by the collision processes of Laurentia, Avalonia and Baltica, the disappearance of the Iapetus ocean, the growth of the Caledonian orogen, the destruction of shelves and the transition of life from sea to land. Presentation of the Caledonian mountains in Scotland and Scandinavia.
7. The emergence of the supercontinent Pangea, the disappearance of the Rheic Ocean and the emergence of Hercynian Europe, the Germanic Basin, etc.
8. Tethys Europe, North Tethys shelves, Apulian and Adriatic plates, Meliat and Vardar oceans, Piedmont-Ligurian ocean, etc.
9. The formation of Neo-Europe by processes of Alpine folding, the uplift of the Alpine-Carpathian system, the formation of the basins of the Mediterranean and Paratethyan regions.
10. Great Pannonian lake, hydrography of river networks, inland Danube delta, contemporary relics of Paratethyan lakes (Balaton, Neusiedler)
11. Formation and paleogeographical development of the Atlantic Ocean, the Central Atlantic and its volcanic province.
12. Paleogeographic changes of the Mediterranean Sea (Messinian crisis, Zanclean flood). Desertification of the Sahara and the impact on the oldest civilizations.
13. Formation of the topo-relief of contemporary Europe, young Tertiary planation processes, Quaternary processes of the relief modeling of Slovakia.

COURSE INFORMATION SHEET

| | |
|--|---|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD103B/22 | Course title: Regional Education |
| Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 2. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Verification of the degree of acquisition of the relevant knowledge, skills and competences of the student is carried out on the basis of active participation in exercises, visiting lectures and exhibitions in the museum and preparation and presentation of semester work - preparation for class. During the semester, the student demonstrates his theoretical knowledge by preparing and presenting seminar exercises on assigned topics. At the end of the semester, he demonstrates his competences in a sample presentation of his independent preparation on a specific topic from the local country. Subject evaluation: A – 100%-93%, B – 92%-85%, C – 84%-77%, D – 76%-69%, E – 68%-60%, Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - knows the theoretical foundations of the conceptual apparatus of regional education, - can define the terms globalization, regionalization, localization, region, local region, regional principle, home, - can apply the regional principle in education (educate and educate through the local region), - understands the meaning and phases of a geographical excursion to the local country, - has complete information about the geographical conditions of the local country, - knows how to work with literature, Internet resources of a geographical and didactic nature - is able to use the high motivational and practical potential of the information obtained in the teaching process in specific topics within various subjects. | |
| Course contents: 1. Regional education and components of education, 2. Regional education, regional identity, regional culture, genius loci, 3. Globalization, regionalization, localization, region, local region, regional principle, home, 4. Geographic knowledge base for regional education and regional identity, 5. Local region, local landscape, micro-regional geography, 6. Activating methods in regional education, 7. Intersubject relationships in the teaching of the local landscape, | |

| | | | | | |
|--|-----|-----|-----|-----|-----|
| 8. Experiential learning in the local country, 9. Preparation of a geographical excursion to the local country, 10. Realization of a geographical excursion to the local country, 11. Project teaching in the local country, 12. Problem teaching in the local country, 13. Visit to the Liptovsky Museum - lecture City with a Rose in the Coat of Arms. | | | | | |

|---|---|
| University: Catholic University in Ružomberok | |
| Faculty: Faculty of Education | |
| Course code: KGE/Ge-MD100A/22 | Course title: Regional Geography of Slovakia 1 |
| Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 13 / 13 Teaching method: on-site | |
| Credits: 2 | Working load: 50 hours |
| Recommended semester/trimester: 1. | |
| Level of study: II. | |
| Prerequisites: | |
| Requirements for passing the course: Verification of the degree of acquisition of the relevant knowledge, skills and competencies of the student is carried out based on the evaluation of the student's ongoing tasks during the semester and on the basis of the evaluation of the written test and the final oral exam. During the semester, active participation in seminars is required in the form of preparation and presentation of seminar exercises on assigned topics. At the end of the semester, the student proves his theoretical knowledge first in the form of a written test. In order to participate in the final oral exam, it is necessary to obtain at least 60% of the points from the test. Subject evaluation: A – 100%-93%, B – 92%-85%, C – 84%-77%, D – 76%-69%, E – 68%-60%, Fx – 59%-0% | |
| Learning outcomes of the course: After completing the subject, the student will acquire the following knowledge, skills and competences: - identifies the area, shape, boundaries and location in relation to various geographical phenomena and contexts, - presents knowledge about individual natural components (geological structure, relief, water, climate, soil, flora and fauna) in terms of their qualitative and quantitative properties, laws of their spatial distribution and connections with other components, - on the basis of a physical-geographical analysis, he understands complex knowledge about the FG components of Slovakia's environment, he also knows the issue of the potential of Slovakia's landscape types and the issue of nature protection, - is able to use acquired knowledge in practice during field exercises, - in seminars, he works with thematic maps from the Atlas of the SSR (1980), the Atlas of the Slovak Republic (2002) and the School Geographical Atlas of the World, with tables and graphs of the SHMÚ. | |
| Course contents: 1. Geographical position of the Slovak Republic, geopolitical position of the Slovak Republic, size and shape of the territory of the Slovak Republic, character of the borders, 2. Geological conditions of Slovakia within the geological structure of Europe, 3. Characteristics of the main geological units in Slovakia, | |

4. Relief of SR, morphosculptural and morphostructural types of relief,
5. Geomorphological division of the SR, relative height division of the SR,
6. Climate of the Slovak Republic, weather, operation and distribution of climatic elements, weather, climatic regions,
7. Vodstvo SR, surface waters, underground waters, mineral and thermal waters,
8. Soils of the Slovak Republic, soil types, soil types and subtypes, zonal and azonal soils,
9. Flora of Slovakia, development of flora on our territory, relics and endemics,
10. Phytogeographic division of Slovakia, spatial distribution of vegetation,
11. Wildlife of the Slovak Republic, development and origin of the fauna, human influence on the fauna of the Slovak Republic, relics and endemics,
12. Zoogeographical structure and division of the fauna of the Slovak Republic, animal communities of the Slovak Republic,
13. Nature and landscape protection, NP, PLA, World Natural Heritage in Slovakia.
