Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: hours per semester: 8s / 8s Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 3.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: a) continuous evaluation: semester work: 30 points (%) b) final evaluation: written test: 70 points (%) Verification of the degree of relevant knowledge, skills and competencies of the student is carried out on the basis of theoretical and practical examinations during the semester course. Course evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the course: The aim of the course is to use domestic and foreign knowledge of the theory and practice of knowledge management and its trends through appropriate forms and teaching methods to strengthen the student's interest in the course and related subjects to think in context, approach holistic to the knowledge management and its application in practice. Learning outcomes of the course: After completing the course the student will gain the following knowledge, skills and competencies: <ul style="list-style-type: none"> - is able to use the obtained knowledge in searching, critical evaluation and processing of relevant information in the field of knowledge management from various information sources - is able based on the understanding of the principles of knowledge management to analyze the quality of available resources in terms of ethics and morality - is able to apply the theory of knowledge management in the specific conditions of the organization in the process of innovation and its sustainable development - is able to assess and perceive knowledge management as an interdisciplinary science in the context of sustainable development and competitiveness of the organization - is able to evaluate the knowledge potential of the organization's employees supported by a suitable corporate culture 	

- is able to create a conceptual model of knowledge management for a specific organization.

Course contents:

1. Terminology in the field of knowledge management. Origin and main stages of knowledge management development.
2. Value chain in the process of knowledge management - data, information, knowledge, wisdom, implementation.
3. Knowledge management in the context of human resources management. Knowledge management in the context of corporate culture.
4. Knowledge management in the context of CSR (Corporate Social Responsibility) model. Knowledge management in the context of the EFQM (European Foundation of Quality Management) model of excellence. Knowledge management in the context of the concept of well-being (quality of life man indicator).
5. Current starting points for implementation, resp. developing knowledge management in practice. Information & Knowledge in the organization environment. Implementation of knowledge management in the organization. Case studies.
6. Causality of knowledge management in practice. Examples.
7. Processes and elements of knowledge management in the organization. Examples.
8. Codification of knowledge and transfer of knowledge. Explicit and tacit knowledge.
9. Strategic decision-making in the context of the use of knowledge management.
10. Innovation management in the context of the use of knowledge management. Examples.
11. Creating a competitive advantage by using knowledge management. Examples.
12. Trends in knowledge management.
13. Case studies from real practice.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KMN/Mn-ME103A/22	Course title: Logistics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: hours per semester: 8s / 8s Teaching method: on-site	
Credits: 6	Working load: 150 hours
Recommended semester/trimester: 2.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: a) ongoing evaluation: Elaborate the Logistics System Project: 40 points b) final evaluation: written test: 60 points The number of points obtained ongoing and final evaluation is 100. It corresponds to the classification rating scale. Credits will be awarded to a student who has obtained at least 60 out of 100 points. Course evaluation: A - 100% -93% B - 92% -85% C - 84% -77% D - 76% -69% E - 68% -60% Fx - 59% - 0%	
Learning outcomes of the course: Course goal: The aim of the course: students are able to understand the basic concepts in logistics, to know the basic methods and concepts of logistics development, to be able to orient themselves in matters of its process management. Learning outcomes: After passing the course, student will gain the following knowledge, skills and competencies: - is able to apply practical knowledge in practice, monitor and measure logistics performance system, optimize and improve processes in logistics, - is able to systematically solve the problems associated with the movement of material in small and medium companies, controls the methods of material flow management, - is able to create, assess, evaluate and manage a logistics system for small and medium-sized enterprises by using the acquired knowledge - procurement logistics, production logistics, distribution logistics, - can obtain, evaluate and use information from the logistics strategy, logistics information system and subsystems to ensure improvement of logistics processes in companies.	
Course contents:	

1. Introduction to logistics. Basic characteristics and concept of logistics.
2. Business logistics. Logistics processes and logistics costs of the company.
3. Logistics technologies. Material flow control.
4. Logistic functions. Purchasing and production logistics.
5. Methods and models to support the production logistics of the company.
6. Customer service.
7. Tasks and goals of supply, elements and tools of supply logistics. Selection of input supplies.
8. Warehouse logistics, trends in warehouse logistics.
9. Distribution logistics, distribution, order processing, packaging management.
10. Transport and transportation systems.
11. Information systems in logistics.
12. Trends in logistics production management.
13. Global trends in logistics. New trends in logistics.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KMN/Mn-ME114A/22	Course title: Thesis Seminar 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: hours per semester: 4s Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 5.	
Level of study: II.	
Prerequisites:	
Requirements for passing the course: Final evaluation: the basic condition for passing the course is the student's professional experience in the real conditions of a specific organization. The focus of professional practice is determined by the focus of the student's final thesis. Part of the evaluation is the development of a project for the final thesis and its submission by the set deadline. The number of points obtained for the final evaluation is 100. It corresponds to the classification scale of the evaluation. Credits will be awarded to a student who receives at least 60 out of 100 points for fulfilling the conditions determined by the thesis supervisor. Course evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Course goal: The aim of the subject is to develop the theoretical part and determine the main goal and sub-goals of the final (diploma) thesis. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - will use the theoretical knowledge acquired during the study when solving the topic of the final thesis, - is able to formulate and identify an objective problem and, based on it, is able to determine the goal of the work and the methods of achieving it, - assesses the state of the problem at home and abroad, formulates his own opinion on the topic under investigation, debates with the authors, - applies systemic and logical thinking when designing the structure of the final thesis.	
Course contents:	

1. The purpose of final theses.
2. Final thesis as a project.
3. Characteristics of the problem. Systematic and unsystematic problem solving.
4. Structured decomposition of the problem. Approaches to setting the goal of work. Indicators for monitoring the fulfillment of the work goal.
