COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD100A/22	Course title: Anatomy and functional anatomy
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 1 hours per semester: 26 / 13 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of relevant knowledge, skills and competences of the student is carried out on the basis of four classified tests, in which he demonstrates his theoretical knowledge of systematics, topography and functional anatomy of individual systems of the human body. A minimum success rate of 60% is required in individual tests. Laboratory protocols from practical exercises are also part of the assessment. Final evaluation: cumulative percentage gain from the continuous written tests (30%) and the theoretical exam (70%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to provide comprehensive knowledge about the arrangement of the human organism, individual systems and organs with an emphasis on the movement system. Know the functional connections of systems, their coordination through the nervous and endocrine systems. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student can define the basic hierarchy of the organization of the human organism, - controls the morphology of individual tissues and their structuring in human organs, - has an overview of the anatomy of individual systems and their topography within the human body, - can interpret the functional connections between individual systems,	

- based on the acquired theoretical knowledge, he is able to guide pupils and students in primary and secondary schools to a healthy lifestyle in the area of supporting movement and healthy eating habits and to cooperate with other experts and institutions.

Course contents:

Course contents:

1. Organization of the human organism. General anatomy
2. Systema sceleti - skeletal system
3. Systema musculare – muscular system
4. Systema nervosum - nervous system
5. Systema nervosum - Peripheral nervous system
6. Anatomy of the sensory system - Systema sensuum
7. Morphology of blood - sanguis. Systema sanguinis. Anatomy of the lymphatic system - Systema lymphaticum
8. Anatomy of the cardiovascular system - Systema cardiovasculare
9. Anatomy of the respiratory system - Systema respiratorium
10. Anatomy of the gastrointestinal tract - Systema digestorium
11. Anatomy of excretory and genital organs - Systema urinarium et genitalium masculinum, femininum
12. Endocrine system - Glandulae sine ductibus
13. Skin - Integumentum commune

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD101A/22	Course title: Antropomotorics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: The degree of acquired theoretical knowledge of the student is realized by a written examination after completing the semester; range 100-0%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The main goal of the course is to provide basic knowledge and explain basic concepts from anthropomotorics. Master and understand the basic concepts and terms of anthropomotorics; to understand the classification, definitions and testing of motor abilities and skills, as well as human ontogenesis from the point of view of motor manifestations, body structure and sports performance. Learning outcomes: After completing the subject, the student will acquire the following knowledge: - basic cross-sectional and relevant knowledge about the development of motor skills, general and special skills, - learn the basics of methodology and principles of pedagogical diagnosis of the educational process in physical and sports education, with respect for the individual characteristics of pupils, students and the adult population, - acquires knowledge about the basics of empirical research in pedagogical sciences and sports sciences.	
Course contents: Course contents: 1. Introduction to anthropomotorics (scientific discipline) 2. Research methods in anthropomotorics 3. Human abilities, movement prerequisites 4. Aptitudes, skills, habits 5. Endurance movement skills and their development 6. Power movement skills and their development 7. Flexibility and its development 8. Hybrid movement skills (speed and explosive power) and their development 9. Coordination movement skills and their development 10. Physical structure as a performance factor 11. Movement and sports performance and performance 12. Movement laterality 13. Ontogeny of human motor skills	
Recommended or required literature: Recommended reading: 1. ZVONÁŘ, M., DUVAČ, I. et al. 2011. Anthropomotorics for the master's program physical education and sport.. COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD104A/22	Course title: Biomechanics
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: Continuous assessment: written tests (max. 50%). Final oral exam (max. 50%). Final assessment: cumulative percentage gain from the interim assessment (50%) and the final oral exam (50%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To understand human movement from a biomechanical point of view and at the same time to understand the essence and causes of the correct execution of the movement and its modifications. Learning outcomes: - master the basics of methodology and principles of pedagogical diagnosis of the educational process in physical and sports education, with respect for the individual characteristics of pupils, students and the adult population.	
Course contents: Course contents: 1. Characteristics of biomechanics as an integral scientific discipline 2. Man as a material system (mechanical properties of the body, support and movement system, types of movement) 3. - 4. Kinematics of human movement (spatial, temporal and spatio-temporal characteristics of movement) 5. - 6. Dynamics of human movement (Forces and their action, internal – muscular forces) 7. - 8. External forces – force of gravity, support reactions 9. The power of inertia. Frictional force	

10. Force of environmental resistance, Magnus effect 11. Forces of elastic deformation, centrifugal and centripetal force 12.-13. Biomechanical methods of learning gym and sports movements

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD101B/22	Course title: Conditioning 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 2., 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Final assessment: Continuous assessment of movement performance and the quality of learning specific movement activities (max. 50%). Exercised work: develop a fitness training program (max. 50%). Final assessment: total percentage gain from the interim assessment (50%) and from the practical work (50%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to acquaint students with the possibilities of using athletic equipment in fitness training with the aim of developing movement skills and their effective application in acquired movement activities. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student acquires knowledge and understanding of the meaning, focus and forms of fitness training and the systematics of fitness, hybrid and coordination abilities in connection with their development using athletic means, - the student will learn to practically demonstrate and creatively apply the means of movement in acquired movement activities in various sports branches and disciplines, - acquires and knows the competencies that serve as starting points for the creation of fitness training plans.	

Course contents:

Course contents:

1. – 2. Use of athletic equipment in fitness training
- 3.- 4. Endurance skills – aerobic and anaerobic endurance
- 5.- 6. Power abilities
- 7.- 8. Speed skills
- 9-10 Flexibility skills
- 11.-12. Coordination skills
13. Principles of creating fitness training programs

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD102B/22	Course title: Conditioning 2
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 2., 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Final assessment: Continuous assessment of movement performance and the quality of learning specific movement activities (max. 50%). Exercised work: develop a fitness training program using gymnastic exercise forms (max. 50%). Final assessment: total percentage gain from the interim assessment (50%) and from the practical work (50%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to improve the level of basic exercise forms from simple exercises and from exercises on tools and their technique. Increase the level of fitness and coordination skills using gymnastic exercise forms. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student acquires and consolidates knowledge in the field of aesthetics of body movement, the need for health, harmonic and rhythmic feeling when performing exercise forms from gymnastics, - the student will improve the level of basic movement skills of exercise forms from flats and exercises on tools and will use them to develop their own fitness and coordination skills, - knows how to constructively approach the creation of training units focused on the development of fitness skills with a focus on gymnastics.	
Course contents:	

Course contents:

1. Simple - rollers, handstand, development of coordination skills and flexibility
2. Simple - stand, forward roll, side flip, development of coordination skills and flexibility
3. Projections tied to the side, projection forward, development of coordination skills and flexibility
4. Circles - swing in the air, hang high, hang headlong, carry forward in the air
5. Circles - prone resistance, development of coordination skills and strength skills
6. Trapeze - escape with a bounce from the foot, turn back, turn with the horse, development of coordination skills
7. Trapeze - suspension with a hinge in the lower leg, swings forward and backward with one leg, development of strength skills
8. Trapeze - pull-out escape, incline resistance, development of explosive power
9. Leap - goat in width, in length, development of explosive power of the lower limbs
10. Leap - box in width: leg, squat, turn, development of coordination skills
11. Parallel bars - swaying in support, shoulder stand, jump, development of strength skills of upper limbs
12. Balance beam - walking, turns, jumps, roll, shoulder stand, jumps, development of coordination skills
13. Rope - positions - hangs, carry, strength exercises, use of start and bounce

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD104B/22	Course title: Conditioning 4
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 3., 4..	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Final assessment: Continuous assessment of movement performance and the quality of mastering specific movement activities (max. 50%). Exercised work: develop a fitness training program (max. 50%). Final assessment: total percentage gain from the interim assessment (50%) and from the practical work (50%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to acquaint students with the possibilities of using swimming equipment in fitness training with the aim of developing movement skills and their effective application in acquired movement activities. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student will gain knowledge and experience in the field of specific methods of developing fitness skills in swimming sports, - the student will improve the level of his swimming skills and use them for his own development of fitness and coordination skills, - knows how to constructively approach the creation and management of training units focused on the development of movement skills with a focus on the specifics of swimming sports,	

- controls and applies the principles of creating exercise programs and training cycles in the stage of swimmers' sports training.

Course contents:

Course contents:

1. Characteristics, focus and forms of fitness training for swimming sports
2. Use of means to increase general swimming performance in swimming methods
3. Improving fitness performance in crawl swimming
4. Improving fitness performance in backstroke swimming
5. Improving fitness performance in breaststroke swimming
6. Improving fitness performance in butterfly swimming
7. – 8. Sports swimming
- 9.-10. Fitness training in water polo
- 11.- 12. Application of specific swimming methods (volume, intensity, alternating load, interval training, fartleks, repeated sections, series of sections, hypoxic training, etc.) in fitness swimming to develop specific swimming skills and improve swimming skills
13. Principles of creating fitness training programs in swimming sports

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD119A/22	Course title: Didactics of physical education
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 6.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of relevant knowledge, skills and competencies of the student is carried out on the basis of the final written test (100-0%).	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to acquire basic knowledge and skills in the theory of teaching physical education. Mastering the basic concepts, approaches and procedures in the subject didactics of physical education. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - master the basics of methodology and principles of pedagogical diagnosis of the educational process in physical and sports education, with respect for the individual characteristics of pupils, students and the adult population, - is able to plan, organize, lead and analyze the physical education and sports process at the ISCED 2 and 3 level in profile educational areas, can evaluate, classify and solve pedagogical situations and processes, - is able to navigate the generally binding legal, ethical, economic regulations relating to the work of a teacher, in pedagogical documentation, in other conceptual and strategic documents of the school, - is able to respond promptly and appropriately to the personality and movement expressions of the trainees and is ready to take responsibility for the safety and health protection of participants in the physical education process, is capable of creating exercise training programs with a versatile and specialized focus.	
Course contents: Course contents: Lectures and exercises: 1. Physical education and sport in the life of a contemporary person 2. Didactics of physical education as a scientific discipline, characteristics of basic concepts 3. Educational process in physical education. Developing movement skills 4. Pupil and teacher in the physical education process 5. Conditions of the physical education process	

6. Assessment in physical education, creation of standards 7. Organizational forms of teaching 8. Current trends in the teaching of physical education in our country and in the world 9. Learning and teaching in physical education 10. Developing student and teacher competencies in the physical education process 11. Physical education curricula, teaching design 12. Work with physically impaired pupils 13. Interest-based physical education and school sports

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD114A/22	Course title: Fundamentals of sports sciences and research methodology
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Final assessment: total percentage gain from the written test (100-0%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: Acquiring knowledge about the basics of sports science methodology and about the collection, processing, statistical evaluation and interpretation of research results. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - master the basics of methodology and principles of pedagogical diagnosis of the educational process in physical and sports education, with respect for the individual characteristics of pupils, students and the adult population, - is able to participate in the solution of professional projects in the field of sports sciences, - can actively acquire new knowledge and information, integrate, process and present them in the educational process and managerial activities in sports, physical education and recreational facilities, - operates in accordance with the professional, ethical and legal framework valid in the Slovak education system.	
Course contents: Course contents: 1. Introduction to the methodology of science in sports sciences	

2. Formulation of a scientific problem, research topic, conceptualization of theoretical starting points 3. Types of research in sports 4. Work methodology, methods of finding and processing empirical data 5. Results and their interpretation, conclusions 6. Bibliographic and citation standard ISO 690 7. Introduction to statistics, statistical files, basic statistical characteristics 8. Location and dispersion 9. Dependent and independent variables 10. Normality of distribution of research data 11. T-tests, Chi-square 12. Level of statistical significance 13. Pair correlation

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD111A/22	Course title: Games 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: During the semester, the student demonstrates his theoretical knowledge of the theory and didactics of movement games in the form of a semester paper, the topic of which he chooses. The student prepares a written preparation and performs a selected movement game. Demonstrates practical movement skills through active participation in movement games during exercises. Constructively-critically evaluates his output and whole-semester activity. Final rating: total percentage gain: - semester written work (50%) - written preparation and management of the movement game (40%) - self-evaluation (10%). - Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To provide the student with knowledge about the functions of movement play in a person's life and to prepare him for the teaching of movement games in physical and sports education classes. To present to the student knowledge about movement games in the school environment as a pedagogical assistant and educator. To provide the student with knowledge about organizing competitions with the application of movement games (dummy) at school. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - familiarization with the possibilities of using exercise games at school, with the principles of applying simple exercise training programs with a focus on exercise games, - mastering selected movement activities that condition participation in the movement game according to the content of education in schools and for the needs of sample demonstrations by students, - learning the theory and didactics of movement games for the needs of activities in sports and recreational facilities.	
Course contents: 1. Movement games in the modules of the State Education Program for primary and secondary schools (ISCED 2 and ISCED 3): Health and its disorders, Healthy lifestyle, Physical fitness and physical performance, Sports activities of the physical regime 2. Movement games to stimulate movement speed and strength skills 3. Movement games to stimulate coordination movement skills 4. Movement games to stimulate endurance movement skills 5. Movement games to develop game skills in sports games 6. Movement games with balls 7. Cooperative movement games 8. Movement	

games in the water environment 9. Movement games on snow 10. Field movement games 11. Movement games with carrying the exerciser 12. Movement games in health physical education 13. Movement games in sports training

Recommended semester/trimester: 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: During the semester, the student demonstrates practical skills through active physical participation in exercises. It will make a sample of the game activity of an individual and the chain of game activities. In the test, he will demonstrate theoretical knowledge of the rules. Constructively-critically evaluates his activity throughout the semester. Final rating: total percentage profit: - demonstration of individual game activity in basketball and floorball (15+15%), - example of a chain of game activities in basketball and floorball (15+15%), - test on the rules of basketball and floorball (10+10%), - self-evaluation (10+10%). - Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To provide the student with knowledge about the function of sports games basketball and floorball in a person's life and to prepare him for their teaching in physical and sports education classes. To present knowledge about basketball and floorball to the student in the school environment as a pedagogical assistant and educator. To provide the student with knowledge about organizing basketball and floorball matches and competitions in schools. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - familiarization with the possibilities of using basketball and floorball at school, - familiarization with the principles of applying simple physical training programs with a focus on basketball and floorball, - mastering selected game activities of basketball and floorball according to the content	

of education in schools and for the needs of sample demonstrations by students, - mastering the theory and didactics of basketball and floorball for activities in sports and recreational facilities, - knows the basics of the educational process of the subject physical and sports education with a focus on basketball and floorball, - can evaluate, classify and solve pedagogical situations when applying basketball and floorball in the educational process, - immediately responds to the needs of regulating the course of exercise and play, especially in the context of safety and health protection of its participants.

Course contents:

Course contents:

Lectures

1. Theory of games
2. Theory and didactics of sports games
3. Game and player performance in sports games: structure and components
4. Basketball and floorball in the State Education Program
5. Basketball and floorball in the school educational program
6. Student performance in basketball and floorball
7. Organizing school competitions in basketball and floorball
8. Organizational forms in learning basketball and floorball at school
9. Didactic forms in learning basketball and floorball at school
10. Theory and didactics of basketball
11. Theory and didactics of floorball
12. Rules and refereeing of basketball at school
13. Rules and decision-making of floorball at school

Exercise 1 - basketball

1. Technique and tactics of holding the ball and ballhandling in basketball
2. Technique and tactics of driving the ball in basketball
3. Technique and tactics of passing in basketball
4. Technique and tactics of shooting in basketball
5. Technique and tactics of rebounding in basketball
6. Technique and tactics of defending a player with and without the ball in basketball
7. Tactics and learning of the throw-and-run offensive combination in basketball
8. Tactics and learning the offensive system in basketball
9. Tactics and learning of the defensive system in basketball
10. Basic rules in school basketball
11. Basics of decision-making in school basketball
12. Outputs of students in the role of referee
13. Outputs of students in the role of couch - leading the school team in a basketball game

Exercise 2 - floorball

1. Technique and tactics of individual offensive game activities in school floorball 1
2. Technique and tactics of individual offensive game activities in school floorball 2
3. Technique and tactics of individual defensive game activities in school floorball
4. Organizing a floorball match, interclass and interschool competitions
5. Application of the rules of floorball and the outputs of students in the function of referee of a floorball match
6. – 13. Students' outputs in the role of couch - leading the school team in a floorball match

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD115A/22	Course title: Games 3
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 13 / 26 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: During the semester, the student demonstrates practical skills through active physical participation in exercises. It will make a sample of the game activity of an individual and the chain of game activities. In the test, he will demonstrate theoretical knowledge of the rules. Constructively-critically evaluates his activity throughout the semester. Final rating: total percentage profit: - demonstration of an individual's game activity in football and volleyball (15+15%), - example of a chain of game activities in football and volleyball (15+15%), - test on football and volleyball rules (10+10%), - self-evaluation (10+10%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To provide the student with knowledge about the function of sports games football and volleyball in a person's life and to prepare him for their teaching in physical and sports education classes. To present knowledge about football and volleyball to the student in the school environment as a pedagogical assistant and educator. To provide the student with knowledge about organizing football and volleyball matches and competitions in schools. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences:	

- has basic knowledge about the peculiarities of pupils' development in the context of their age, gender, developmental, health and social potential disadvantages, or giftedness and talent,
- can demonstrate game activities to students. It is a motivator of a healthy lifestyle,
- has a positive attitude towards lifelong professional development and education focusing on football and volleyball,
- is able to cooperate effectively with other experts and organizations and respect their recommendations effectively in the educational process,
- can evaluate, classify and solve pedagogical situations when applying football and volleyball in the educational process,
- can solve problems when organizing football and volleyball at school, coordinate, make decisions and supervise compliance with the rules during practice and games.

Course contents:

Course contents:

Lectures

1. Sports training in sports games and its construction and management.
2. Selection of talents in sports games.
3. Sports training of children and youth in sports games.
4. Football and volleyball in the State Education Program
5. Football and volleyball in the school educational program
6. Student's game performance in football and volleyball
7. Organizing school competitions in football and volleyball
8. Organizational forms in learning soccer and volleyball at school
9. Didactic forms in learning soccer and volleyball at school
10. Theory and didactics of football
11. Theory and didactics of volleyball
12. Rules and refereeing of football at school
13. Rules and refereeing of volleyball at school

Exercise 1 - football

1. Driving the ball, passing with the feet and the head
2. Stopping the ball with your feet
3. Processing the fly ball through the air with the thigh, chest and head
4. Shooting with legs and head
5. Goalkeeper activity: catching and kicking the ball
6. Basics of rules and decision-making in school football
- 7.-13. Outputs of students as a referee and coach in a football match

Exercise 2 - volleyball

1. Two-handed hitting from above and below
2. Smacking and blocking the ball
3. Serving the ball from above and below
4. Practice of simple game combinations in volleyball
5. Organizing a volleyball match, interclass and interschool competitions.
6. - 13. Student outputs as a referee and coach in a volleyball match

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD102A/22	Course title: Gymnastics 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 2 hours per semester: 26 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 1.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of the relevant knowledge, skills and competencies of the student is carried out on the basis of theoretical and practical examinations during the semester teaching of the subject. Practical skills and continuous assessment (75%) Theory test (25%) Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To provide the student with knowledge about the function of gymnastics in a person's life and to prepare him from a practical and fitness point of view to master the methodology of basic gymnastic elements. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student has basic cross-sectional and relevant knowledge about the forms of warm-up and stretching and knows how to name the basic exercise forms correctly in terms of terminology, - possesses basic skills in exercises of simple elements and in exercises on tools, - can solve problems in the process of motor learning while improving the technique of performing gymnastic elements.	
Course contents: Course contents:	

1. Tasks and goals of basic gymnastics 2. Sequence exercises 3. Terminology of gymnastics 4. Types and forms of exercise 5. Tasks of warm-up in the physical education process 6. Basic movements – walking, running, hops, lunges, etc. 7. Basic dance steps - one-step, step-step, hopping, polka, waltz... 8. Creation of movement studies 9. Stretching and its types 10. Exercises with and without equipment 11. Basic gymnastic elements - floor 12.-13. Practice on tools

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD110A/22	Course title: Gymnastics 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 13 / 26 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites: KTVS/Tx-BD102A/22	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of the relevant knowledge, skills and competencies of the student is carried out on the basis of theoretical and practical examinations during the semester teaching of the subject. Practical skills and continuous assessment (50%) Theory test (25%) Seminar work (25%) Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To present knowledge about gymnastics to the student in the environment of school physical education as a pedagogical assistant and educator. To prepare the student from a practical point of view for mastering the didactic part of teaching gymnastics. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - master the basics of gymnastics methodology in physical and sports education, with respect for the individual characteristics of pupils, students and the adult population, - possesses basic skills in the demonstration of basic gymnastic elements, - is capable of creating exercise training programs with a focus on gymnastics within the school education system,	

- able to solve problems and coordinate procedures for the development of gymnastic skills in physical and sports training classes as a teaching assistant.

Course contents:

Course contents:

Exercise:

1. Simple - rolls, handstand
2. Prostné - handstand
3. Roll forward, side sweep
4. Projections tied to the side, projection forward
5. Circles - swaying in the air, hanging high
6. Hanging headlong, hanging forward
7. Circles - bent over resistance
8. Trapeze - escape with a bounce from the foot, turn back, turn with the horse
9. Trapeze - suspension with a hinge in the lower leg, swings forward and backward
10. Trapeze - pull-out escape, incline resistance
11. Jump - goat in width, in length
12. Vault - box to the width: springboard
13. Shrčka, turn.

Lectures:

1. History of gymnastics
2. Division of gymnastics
3. General gymnastics
4. Gymnastic sports
5. Movement gymnastic structures
6. Motor learning in gymnastic sports
7. Development of movement skills by means of gymnastics
8. – 9. Pedagogical process in gymnastics
- 9.-10. Gymnastic terminology
10. - 13. Terminology of exercises on tools

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD112B/22	Course title: Hiking instructor
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 13 / 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of the relevant knowledge, skills and competences of the student is carried out on the basis of theoretical and practical examinations during the semester teaching of the subject. Practical skills and continuous assessment (50%) Theory test (25%) Seminar work (25%) Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the training of hiking instructors of the 1st qualification level is to prepare a qualified expert for sports in the field of hiking. A hiking instructor of the 1st qualification level is authorized to lead, organize and implement short-term hiking activities. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student has a wide range of knowledge related to movement and survival in nature, - has relevant knowledge related to the legal aspects of the instructor's practice, - knows the basics of first aid, - is able to plan and implement a multi-day tourist expedition.	
Course contents: Course contents:	

1. Characteristics of KST
2. Selection and preparation of tourist events - specifics
3. The legal minimum of a PT instructor
4. Gear and equipment for hiking
5. Basics of field orientation and work with a guide
6. Basics of meteorology
7. Danger in the mountains
8. – 11. First aid, injuries and non-injury conditions during hiking
12. Tourist signage and marked routes (TZT)
13. Preparation, planning and organization of tourist activities

Course code: KTVS/Tx-BD109A/22	Course title: History of Sports
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: Intermediate assessment: exercise and work (max. 30%) Final assessment: exam (max. 70%) Final assessment: cumulative percentage gain from the interim assessment (30%) and oral exam (70%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To provide students with knowledge of the development of sports and the sports movement in the world and on the territory of Slovakia, including the origin and development of school physical education. Gain knowledge about the main stages of the origin and development of sport in individual periods of social development in the world and in Slovakia, including the genesis of school physical education. To understand the conditionality of the development of sport with the economic, cultural and social conditions of society. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - has basic information about the history of sports, - can follow the basic development trends in the sports movement and Olympism, - has knowledge and understanding of national and regional facts in the field of sports.	
Course contents: Course contents: 1. Sport in prehistoric times and in ancient oriental despotisms 2. Sport and its status in Greek and Roman antiquity	

3. Ancient Olympic Games
4. Decline of sports in the Middle Ages, knightly culture
5. European physical education systems (tournament gymnastics, Swedish gymnastics, French system)
6. Reforms of physical education systems and development of sports sciences
7. The emergence of modern sport, its expansion from England to Europe and the world, the beginnings of important sporting events, the restoration of the Olympic Games
8. Sport on the territory of Slovakia from the arrival of the Slavs to 1848 and in the period 1848 – 1918
9. Sport in the pre-Munich Czechoslovak Republic and in the years of the Slovak State
10. Sport on the territory of Slovakia in the period 1945-1989
11. Sport in the current Slovak Republic and an outline of the development of Olympism in Slovakia
12. Genesis of school physical education in Slovakia
13. Summary

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD108A/22	Course title: Human physiology and physiology of exercises
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 1 hours per semester: 13 / 13 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 3.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of the relevant knowledge, skills and competencies of the student is carried out on the basis of practical examinations during the semester teaching of the subject and a theoretical examination after completion of the subject. During the semester, the student demonstrates his skills by working independently on practical exercises and autonomously solving assigned tasks. After completing practical exercises, he is also tested on theoretical knowledge. Final assessment: total percentage gain from activities during the semester 50% and from theoretical knowledge 50%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to convey to students the most important information regarding the various processes taking place in the human body, which ensure all vital functions. The subject is specially devoted to the physiology of the locomotor system and the functional relationships of other systems involved in the physiology of physical exercises. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student has basic knowledge about the physiological activity of individual human organ systems, - knows the basics of biological, physiological and health laws of physical activity with a focus on education for a healthy lifestyle,	

<p>- knows the principles of physical exercises and, based on them, is able to react promptly and appropriately to the personality and movement expressions of the exercisers and is ready to take responsibility for the safety and health protection of the participants in the physical education process.</p>					
<p>Course contents: Course contents: 1. Blood physiology 2. Hemostasis 3. Physiology of breathing 4. Thermoregulation and the influence of heat and cold. Fever 5. Physiology of digestion and absorption 6. Transformation of substances 7. Physiology of blood and lymph circulation 8. Physiology of endocrine glands I. 9. Physiology of endocrine glands II. 10. Excretory system 11. Genital system. Pregnancy 12. Nervous system I. 13. Nervous system II. Vegetative nervous system</p>

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD118A/22	Course title: Listening prax
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Final evaluation: Evaluation of pedagogical documentation (practice diary), recording and evaluation of clinical hours, written preparations for leading a lesson, or its parts (40%). Management of the teaching process (assistant practice, part or the whole lesson (60%). Final evaluation: total percentage gain from the evaluation of pedagogical documentation (40%) and management of the teaching process (60%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to become familiar with pedagogical phenomena and to learn to apply one's own knowledge from the didactics of physical and sports education and supporting subjects in managing the teaching process in specific conditions. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student becomes familiar with the regularities of the pedagogical process in TaŠV, learns to apply the acquired knowledge in planning the process, is able to confront his own knowledge with real practice, - the student acquires skills associated with managing the physical education process, - organizes and applies basic didactic forms, - can evaluate the process and results of students in achieving the goals of the lesson.	
Course contents:	

Course contents: 1. Familiarization of students with the goals and tasks of pedagogical practice, with specific teaching conditions and with pedagogical documentation at the selected elementary school 2. As part of the supervision of the lessons, record their goal, structure and brief content 3. Perform and evaluate the timing of activity and internal (functional) load for the selected student; record and evaluate the teacher's activities 4. Part of the implementation of students' first teaching attempts is assistant practice, leading a part of a lesson and independent leading a lesson under the supervision of a faculty teacher 5. Evaluation of practice (fulfillment of goals and tasks, evaluation of pedagogical documentation and the quality of the implementation of students' teaching experiments)

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD100B/22	Course title: Movement preparation BUBO
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 1	Working load: 25 hours
Recommended semester/trimester: 1., 2..	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Ongoing fulfillment of performance requirements and the quality of learning movement activities (max. 60%). Participation in exercises (max. 40%). Final assessment: summative Subject assessment: A – 100%-94% B – 93%-88% C – 87%-81% D – 80%-75% E – 74%-69% Fx – 68%-0%	
Learning outcomes of the course: Master the basic athletic and gymnastic skills and master the practical exercises included in the BUBO project. Basic terminology from athletics and gymnastics Development of motor skills through basic athletic and gymnastic means.	
Course contents: 1.-5. Basic locomotion - running for short distances, running over various obstacles, running with changes of direction, starts from different positions, movement games using running. 6. – 10. Manipulation activities with the ball, manipulation activities with hoops, exercises on benches and with benches, exercises on ribs, combinations of individual exercises. 11. – 12. Diagnostics of movement skills.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD105B/22	Course title: Non-traditional games
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: During the semester, the student demonstrates practical skills by actively participating in exercises in the game. It will make a sample of the game activity of an individual and the chain of game activities. In the test, he will demonstrate theoretical knowledge of the rules. Constructively-critically evaluates his activity throughout the semester. Final rating: total percentage profit: - a sample of the game activity of an individual of a selected non-traditional game (30%), - example of the chain of game activities of the selected non-traditional game (30%), - a test on the rules of a selected non-traditional game (20%), - self-evaluation (20%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To provide the student with knowledge about the function of non-traditional games in a person's life and to prepare him for teaching them in physical and sports education classes. To present to the student knowledge about non-traditional games in the school environment as a pedagogical assistant and educator. To provide the student with knowledge about organizing matches and competitions of non-traditional games in schools. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - mastering selected game activities of non-traditional games according to the content of education in schools and for the needs of sample demonstrations by students, - learning the theory and didactics of non-traditional games for activities in sports and recreation facilities, - mastering the technical skills and tactics of game activities in selected non-traditional games and decision-making in them.	
Course contents: Course contents: 1. Learning the basic rules of the non-traditional games frisbee, badminton, ringo, soft tennis, 3x3 basketball and their modifications 2. Practicing the tactics of selected non-traditional games 3. Material and spatial equipment of non-traditional games 4. Organizing school competitions in non-traditional games 5. Rules, decision-making and outputs of students in the role of referee of a non-traditional game 6.-13. Students' outputs in the function of couch - leading the school team in a non-traditional game match

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD107B/22	Course title: Preparation and organisation of sport events
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 3., 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Verification of the degree of acquisition of the relevant knowledge, skills and competences of the student is carried out on the basis of the final assessment: total financial profit from the performance of the function of organizer at school events (50%) and from the seminar work (50%). Subject evaluation: A - 100% - 93% B - 92% - 85% C – 84% - 77% D - 76% - 69% E - 68% - 60% FX - 59% - 0%	
Learning outcomes of the course: Objective of the subject: Gain basic knowledge and acquire practical skills associated with the preparation and implementation of school competitions and sports events. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student must comply with basic legal standards when organizing sports events in the Slovak Republic, - will have the basic skills of preparing, organizing and managing sports, social, educational and entertainment recreational events at the school and regional level, - students must be familiar with the principles of compiling a schedule, creating organizational security, promotion, creating a time committee, scheduling and evaluating events, - learn the basic rules of selected competitions and sports branches.	
Course contents: Course contents: 1. Act on sports in the Slovak Republic 2. Promotion and marketing of sports events 3. Financial security of sports events 4. Principles of building a schedule of sports (school) events 5. Creation of the organizing committee (commissions), spatial and material equipment 6. Principles of creating a time schedule 7. Processing of results and evaluation of events 8. Learning the basic rules of decision-making in selected sports, or disciplines 9. – 13. Demonstrations of own organization of a sports event	
Recommended or required literature: 1. Act on Sports in the Slovak Republic, r. 2013. 2. Rules of selected sports branches, or disciplines Propositions and competition rules of school and sports events.	
Language of instruction: Slovak language

Faculty: Faculty of Education	
Course code: KTVS/Tx-BD100S/22	Course title: State final exam - Physical education
Type and range of planned learning activities and teaching methods: Form of instruction: Recommended study range: hours weekly: hours per semester: Teaching method: on-site	
Credits: 5	Working load: 125 hours
Recommended semester/trimester: 5., 6..	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: During the state final exam, the student presents the final thesis, comments on the comments and questions of the work assessors, and in the discussion demonstrates the level of mastery of the issue and processing of the final thesis. After preparation, he answers verbally to the statesmanship questions.	
Learning outcomes of the course: Objective of the subject: Verify the student's theoretical knowledge in accordance with the content of the profile of the graduate of the Physical Education Teaching program and the Teaching and Pedagogical Sciences field of study. Learning outcomes: By passing the state exam, the student is able to analyze and creatively apply the theoretical knowledge of the physical education study program in the pedagogical process, systematically apply the acquired general and special professional knowledge and skills from physical education, related scientific disciplines and sports branches in the physical education process.	
Course contents: Course contents: 1. Defense of the final thesis 2. Colloquial exam on the subjects of the study program	
Recommended or required literature: Recommended reading: 1. BERNADIČ, M., FINDRA, J., KATUSČÁK, D., MEŠKO, D., NEMCOVÁ, E., PULLMANN, R., ŽIAKOVÁ, K. 2005. Academic handbook. 2. add. ed. Martin: Osveta Publishing House, 2005. 496 p. ISBN 80-8063-200-6. According to the literature, compulsory subjects of the study program.	
Language of instruction: Slovak language

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD109B/22	Course title: Statistics in practice
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2., 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of the relevant knowledge, skills and competences of the student is carried out on the basis of theoretical and practical examinations during the semester teaching of the subject. Practical skills and continuous assessment (50%) Theory test (50%) Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: Providing knowledge of the use of the MS Excel spreadsheet. Expanding students' knowledge of statistics with a focus on solving practical tasks. Preparing students for statistical processing of results on a computer. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - has relevant knowledge about the sequence of data processing through statistical methods, - practically controls the basic statistical functions of the MS Excel program, - possesses basic professional competences for effective work with statistical software.	
Course contents: Course contents: 1. Types of variables in research	

2. Descriptive characteristics of variables. Measures of position (mean, median, mode), measures of variability (range, interquartile range, variance, standard deviation), measures of shape (skewness, slope)
3. Description of nominal, cardinal and ordinal variables
4. Comparison of data sets according to frequency and variability rates
5. Statistical hypotheses and their formulation
6. Statistical hypothesis testing. Significance
7. Testing data sets of nominal variables (chi-square test, binomial test)
8. Testing data sets according to an ordinal variable (Mann-Whitney U-test, Kruskal-Wallis test)
9. Testing data sets by cardinal variable (Student's t-test, ANOVA)
10. Relationships between variables. Correlation analysis. Correlation coefficient
11. Product correlation – relationships between cardinal variables (Pearson's coefficient)
- 12.-13. Relationships between nominal variables (Cramer's coefficient), relationships between 2 ordinal and 1 ordinal and 1 cardinal variable (Spearman's coefficient and Keddall's tau)

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD106A/22	Course title: Swimming 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 2 hours per semester: 26 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Final rating: The student manages the practical requirements, achieves the required swimming performance, demonstrates practical skills during the semester - applies the required technique of freestyle swimming (crawling technique) and breaststroke. Swimming under water. Continuous assessment of movement performance and quality of learning specific movement activities (max. 40 + 40 + 20%) 100%. Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the course is to clarify and acquire basic knowledge and skills in swimming, to be able to explain the technique and apply the didactics of selected basic swimming methods when teaching non-swimmers. Learn basic swimming skills. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - the student gets a comprehensive overview of games in the water environment, acquires knowledge in the field of hydrodynamics and hydrostatics, - acquires and applies acquired didactic knowledge and skills in teaching swimming in selected swimming methods, - masters swimming skills and the required technical level of breaststroke and freestyle swimming (crawling technique) and underwater swimming, manages the block start, pendulum turn and underwater swimming,	

- precisely and dynamically controls the processes necessary to teach basic swimming to non-swimmers.

Course contents:

Course contents:

1. Introduction to the theory and didactics of swimming - safety and hygiene requirements
2. Basic swimming and water games - division of games
3. Diagnostics of the entry level of students' swimming ability
4. Freestyle technique (crawling technique)
5. Didactics free style (crawling technique)
6. Breast method technique
7. Breast method technique
8. Pendulum turn
9. Starting jump from the blocks
10. Technique of swimming under water
11. Basics of first aid for drowning
12. Evaluation of the effectiveness of swimming methods
13. Evaluation of swimming performance

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD116A/22	Course title: Swimming 2
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 1 / 2 hours per semester: 13 / 26 Teaching method: on-site	
Credits: 3	Working load: 75 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites: KTVS/Tx-BD106A/22	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: During the semester, the student demonstrates practical skills through active physical participation in exercises. Verification of the degree of acquisition of the relevant knowledge, skills and competencies of the student is carried out on the basis of the final written test Final rating: total percentage profit: - demonstration of ability and technique of swimming methods (15%), - demonstration of skill in rescuing and helping a drowning person (15%). - demonstration of individual water polo and diving skills (10+10%), - written test (50%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To acquire knowledge of the theory and didactics of swimming of all swimming styles. To acquire all the necessary skills and learn the laws of biomechanics of swimming styles. Master the didactics of swimming and water polo. Master and improve the technique of basic swimming methods and selected swimming skills from swimming sports, as well as master their basic decision-making rules. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences:	

- has basic knowledge about the impact of the aquatic environment on the organism and the impact on the individual's health. He controls the knowledge needed to save a drowning person and help a tired swimmer, knows the didactics of water polo,
- possesses knowledge about standard and specific development of individuals, which indirectly and directly affect performance in swimming. Based on them, he can effectively cooperate with other experts or institutions during the implementation of the educational process and follow their professional recommendations,
- is able to plan, organize, lead and analyze the physical education and sports process at ISCED 2 and 3 levels in the areas of the aquatic environment. Can evaluate, classify and organize swimming events at the school level. Has the necessary fitness prerequisites and movement skills from swimming sports at the school and regional level,
- possesses basic professional competences for effective work in the social-scientific, professional-subject, information-communication technology, academic and managerial context of teaching and sports sciences,
- is able to create movement training programs from sports swimming, plan and lead training units from water polo.

Course contents:

Course contents:

Lectures:

1. Introduction to the theory of swimming, the health significance of swimming and movement in the water environment.
2. Mastering movement activities in swimming.
3. Biomechanical basics of swimming - kinematics.
4. Biomechanical basics of swimming - dynamics - hydrostatics.
5. Technique and didactics of freestyle swimming (crawl).
6. Technique and didactics of swimming style (character).
7. Technique and didactics of swimming method (breaststroke).
8. Technique and didactics of swimming style (bow tie).
9. Basic and sports swimming.
10. Rescue of a drowning person.
11. Water polo.
12. -13. Jumps into the water, synchronized swimming.

Exercise:

1. Improving movement activities in the water environment.
2. Use of swimming aids for practicing swimming skills.
3. Crawl.
4. Breasts.
5. Emblem – example.
6. Bow tie – example.
7. Sports swimming.
8. Water polo.
9. Jumps into the water, synchronized swimming.
10. Helping a tired swimmer
11. Rescue of a drowning person.
12. – 13. First aid for saving a drowning person.

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD106B/22	Course title: Table tennis
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 1 hours per semester: 13 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2., 4.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of relevant knowledge, skills and competences of the student is carried out on the basis of continuous fulfillment of performance requirements and the quality of acquisition of movement activities (50%), final exam on the rules (max. 50%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: Acquisition of theoretical knowledge and acquisition of basic practical skills required for the 3rd class coaching and referee qualification level. Basic mastery of the rules and technique of basic strokes. Mastering the technique of basic strokes. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - acquire basic cross-sectional and relevant knowledge about the development of general and special skills and basic rules in table tennis, - has the necessary fitness prerequisites and movement skills and possesses the basic skills of preparation, organization, management and decision-making of sports, social, educational and entertainment recreational events at the school and regional level, - is able to respond promptly and adequately to the personality and movement expressions of the trainees and is ready to take responsibility for the safety and health protection of the participants in the physical education process.	
Course contents:	

Course contents: <ol style="list-style-type: none"> 1. History and development; systematics of game activities 2. Biomechanics and technique of basic table tennis strokes 3. Peculiarities in the preparation of children and youth 4. Practice of basic game activities 5. Improving basic game activities 6. Practicing and improving the forehand 7. Practicing and improving the backhand 8. Training and improving the service 9. Basics of rules and decision-making in table tennis 10. Basics of tactics, strikes with upper, lower and side rotation 11. Influence of materials (covers and sponges, type of wood on rackets) on the game 12. Own game (singles) 13. Own game (doubles)

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD113B/22	Course title: The fundamentals of alpine hiking
Type and range of planned learning activities and teaching methods: Form of instruction: Lecture / Seminar Recommended study range: hours weekly: 2 / 2 hours per semester: 26 / 26 Teaching method: on-site	
Credits: 4	Working load: 100 hours
Recommended semester/trimester: 5.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the subject and the method of verification of acquired knowledge, skills and competences: Verification of the degree of acquisition of the relevant knowledge, skills and competences of the student is carried out on the basis of theoretical and practical examinations during the semester teaching of the subject. Practical skills and continuous assessment (50%) Theory test (25%) Seminar work (25%) Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: To provide knowledge about the basic issues of alpine tourism. Learning basic skills for movement in high-altitude terrain. Preparation for mastering the instructor's course. Learning outcomes: After completing the subject, the student will acquire the following knowledge, skills and competences: - will have relevant knowledge about the necessary equipment and movement in high-altitude terrain, - will be able to anticipate the development of the weather and thereby eliminate the related danger, - has basic skills when moving in difficult and rocky terrain, - knows the basic belaying and rappelling techniques, - he orients himself in the issue of proceeding along secured roads (Ferrata), - is capable of creating exercise training programs with a focus on high-altitude tourism.	

Course contents:

Course contents:

Lectures:

1. principles of activities of alpine tourists
2. danger in the mountains
3. principles of first aid
4. equipment of alpine tourists
- 5th – 13th climbing and belaying technique, movement in winter terrain

Practical part:

1. Walking in difficult terrain
2. Procedure in rocky terrain, free climbing technique
3. Protection
4. Procedure after fixed securing means
5. – 13. Rappelling

Recommended or required literature:

Recommended reading:

COURSE INFORMATION SHEET

University: Catholic University in Ružomberok	
Faculty: Faculty of Education	
Course code: KTVS/Tx-BD105A/22	Course title: Track-and-field 1
Type and range of planned learning activities and teaching methods: Form of instruction: Seminar Recommended study range: hours weekly: 2 hours per semester: 26 Teaching method: on-site	
Credits: 2	Working load: 50 hours
Recommended semester/trimester: 2.	
Level of study: I.	
Prerequisites:	
Requirements for passing the course: Conditions for passing the subject and the method of verification of acquired knowledge, skills and competences: Ongoing fulfillment of performance requirements and the quality of learning movement activities (max. 60%). Final written test (max. 40%). Final assessment: cumulative percentage gain from the interim assessment (60%) and the written test (40%). Subject evaluation: A – 100%-93% B – 92%-85% C – 84%-77% D – 76%-69% E – 68%-60% Fx – 59%- 0%	
Learning outcomes of the course: Objective of the subject: The aim of the subject is to acquire basic knowledge and skills from the theory and didactics of physical activity of selected (natural) athletic disciplines. Master the basics of theory and decision-making of selected athletic disciplines. Learning and improving movement of athletic disciplines, specific skills and development of movement skills - sprint and endurance running, long jump, cricket ball (grenade) throw, low start, special running, rebounding and throwing exercises. Learning outcomes: - has basic cross-sectional and relevant knowledge about the development of movement skills, general and special skills in athletic disciplines, - is able to plan, organize, lead and analyze the physical education and sports process at the ISCED 2 and 3 level in profile educational areas. He can evaluate, classify and solve pedagogical situations and processes. Has the necessary fitness prerequisites and movement skills from selected athletic disciplines and special running, rebounding and throwing exercises, knows the basics of biological, physiological, didactic and health laws of athletic disciplines with an orientation to education for a healthy lifestyle, - possesses the basic skills of preparation, organization, management and decision-making of athletic events at the school and regional level,	

- is able to respond promptly and appropriately to the personality and movement expressions of the trainees and is ready to take responsibility for the safety and health protection of the participants in the physical education process,
- is able to create movement training programs with a versatile and specialized focus.

Course contents:

Course contents:

1. Flexibility and joint mobility - running and rebounding ABC - aerobic endurance 1
2. Running ABC – reaction and acceleration speed – long jump 1 – aerobic endurance 2
3. Running ABC - low start - long jump 2 - aerobic endurance 3
4. Low start - maximum running speed - long jump 3 - aerobic endurance 4
5. Speed endurance – long jump 4 – aerobic endurance 5
6. Check: low start – 100 m – 3000 m
7. Running and bouncing ABC - long jump 5 - cricket ball throw 1
8. Check: running ABC – long jump
9. Vrháčská ABC – cricket ball throw 2
10. Game rebounding and throwing exercises - cricket ball throw 3
11. Special flexibility - cricket ball throw 4
12. Rebound exercises - cricket ball throw 5
13. Control: cricket ball throw

Learning outcomes of the course: Objective of the subject: Master the basics of theory, didactics and diagnostics (performance evaluation and quality of acquisition) of movement activities of selected athletic disciplines. Master and improve movement activities of athletic disciplines, specific skills and development of movement skills - obstacle and relay running, anaerobic endurance (400 m), shot put, high jump, special running, rebounding and throwing exercises. Learning outcomes: - has basic cross-sectional and relevant knowledge about the development of movement skills, general and special skills in athletic disciplines, and at the same time possesses basic knowledge about the peculiarities of the development of individuals, which result from their age, health, or social disadvantages, or talents and talents, so that he can to effectively cooperate with other experts or institutions in the implementation of the educational process and follow their professional recommendations and conclusions that can be used in practice, - is able to plan, organize, lead and analyze the physical education and sports process at the ISCED 2 and 3 level in profile educational areas. He can evaluate, classify and solve pedagogical situations and processes. Has the necessary fitness prerequisites and movement skills from selected athletic disciplines and special running, rebounding and throwing exercises, knows the basics of biological,	

physiological, didactic and health laws of athletic disciplines with an orientation to education for a healthy lifestyle,

- possesses the basic skills of preparation, organization, management and decision-making of athletic events at the school and regional level,
- is able to respond promptly and appropriately to the personality and movement expressions of the trainees and is ready to take responsibility for the safety and health protection of the participants in the physical education process,
- is able to create movement training programs with a versatile and specialized focus.

Course contents:

Course contents:

Lectures

1. - 2. Characteristics of athletics, systematics of athletic disciplines
3. - 4. Theory of movement activity: running and long jump
5. - 6. Theory of motor activity: high jump, cricket ball throw and shot put
7. - 9. Didactics: pedaling and swing running, long jump
10. - 12. Didactics: high jump, cricket ball throw and shot put
13. Fulfillment of credit requirements (written test)

Exercise:

1. Hurdle flexibility - throwing ABC - aerobic endurance
2. Obstacle course ABC - shot put 1 - relay run 1
3. Flexibility and joint mobility - anaerobic endurance 1
4. Rhythmic obstacle exercises - shot put 2 - relay run 2
5. High jump 1 - anaerobic endurance 2
6. Obstacle course 1 – shot put 3 – relay race 3
7. High jump 2 - anaerobic endurance 2
8. Obstacle course 2 - speed endurance 1
9. High jump 3 - shot put 4
10. Obstacle course 3 - speed endurance 2
11. High jump 4 - relay run 4
12. Special running, rebounding and throwing exercises
13. Control: obstacle course in reduced conditions - high jump - shot put - 400 m
